Country Roads Board,
Melbourne,

1st November, 1916.

The Hon. W. A. Adamson, M.L.C.,
Minister of Public Works,
Melbourne.

SIR,

In compliance with the requirements of Section 73 of the Country Roads Act, I have the honour to submit to you the Third Annual Report of the proceedings of the Board.

The letting of Contracts for Permanent Works was entirely suspended between 31st October, 1915, and 1st May, 1916. The expenditure for the year under that heading therefore relates principally to works entered upon in the previous year and completed during the year under review. Notwithstanding this restriction, however, the expenditure on Permanent Works during the year amounted to £464,787 2s. 11d., while that on maintenance totalled £98,878 13s. 8d., details of which are set out in the Report.

I have the honour to be,

Sir,

Your obedient Servant,

W. CALDER,

Chairman.

COUNTRY ROADS BOARD.

THIRD ANNUAL REPORT.

When the Board entered upon the third year of its operations, it was hoped that the work of constructing and improving the system of main and developmental roads, as shown on the map issued with the previous Report, would have proceeded uninterruptedly during the year. This hope, however, was not realized.

The difficulties experienced by contractors employing a large number of horses continued throughout the first half of the year, owing to the high cost of fodder. In addition, owing to many of the most suitable type of men for road works having enlisted for active service, contractors had great difficulty in keeping their plant fully occupied, and in expediting the completion of their contracts, with the result that many contracts were not finished until long after the specified time.

In rural districts, owing to enlistment by large numbers of countrymen, and to the fact that a record harvest was assured, there was considerable anxiety as to whether sufficient labour would be available for harvesting operations.

It also became evident that, apart from the necessity for releasing as much labour as possible for gathering the harvest, there was a considerable increase in the cost of team and manual labour required for road works, in addition to the increase caused by the war in the cost of materials, such as cement and steel required for bridges and culverts.

Owing to these circumstances, together with the unsettled financial conditions consequent on the war, it was decided by the Government that works for which contracts had already been entered into should be completed, but that the letting of new contracts for permanent works should be discontinued by the Board after the 31st October, 1915, until a return to normal conditions. In the meantime the roads were to be kept in a trafficable condition by means of expenditure of maintenance funds, even if an increased expenditure from this source should be found necessary.

In the previous Report reference was made to several proposals for roads of a developmental character that had not yet been investigated. During the year three of these have been inspected and two of them gazetted as main roads, viz. :—

- (1) The Paraparap-road in the Shire of Barrarbool, from the Barrarbool-road southerly to the Moriac railway station; thence further southerly and easterly through the agricultural district of Paraparap to its junction with the Geelong to Anglesea-road.
- (2) The Wild Dog Valley-road in the Shire of Woorayl, from Leongatha north-westerly along the valley of the creek of that name to the terminus of the new railway line in course of construction from Koo-wee-rup to McDonald's Track.

The third proposal is for a road from the railway station at Shelley, on the new railway from Tallangatta to Cudgewa; thence northerly to the Murray Valley-road at Walwa; and thence to the Jingellic bridge across the Murray River.

This route has been thoroughly investigated and surveyed by the Board's staff, and a road has been located on which the maximum gradient is 1 in 20, which is regarded as extremely satisfactory for so mountainous a district as that intervening between the Murray River Valley and the new railway line, and, as the route traverses granitic country throughout, it should not be a costly undertaking.

The construction of this and other roads in this part of the State is considered essential, if the new railway line from Tallangatta to Cudgewa is to develop into a payable proposition within a reasonable time.

PERMANENT WORKS.

Several of the more extensive works which have been in course of construction during the past two years have been completed and at this date are open for traffic.

Amongst the most important on the main traffic routes are the following :—

Melbourne-Bendigo-road.—Between Harcourt and Bendigo, 11 miles, regraded and reconstructed throughout.

Melbourne-Geelong-road.—23 miles from Footscray boundary, through the township of Werribee to within half-a-mile of the Little River, and a further 9 miles towards Geelong. The construction of the intervening section, which is the worst portion of the road, has unfortunately had to be postponed, owing to the reasons already stated. If the necessity for a cessation of work could have been foreseen this latter section would certainly have been the first to be constructed.

Melbourne-Healesville-road.—Eight miles between Lilydale and Healesville constructed throughout.

Main Gippsland-road.—From Longwarry through Drouin, Warragul and Darnum to Yarragon, 19 miles regraded and constructed.

Ferntree Gully-Olinda-road.—4½ miles regraded and constructed.

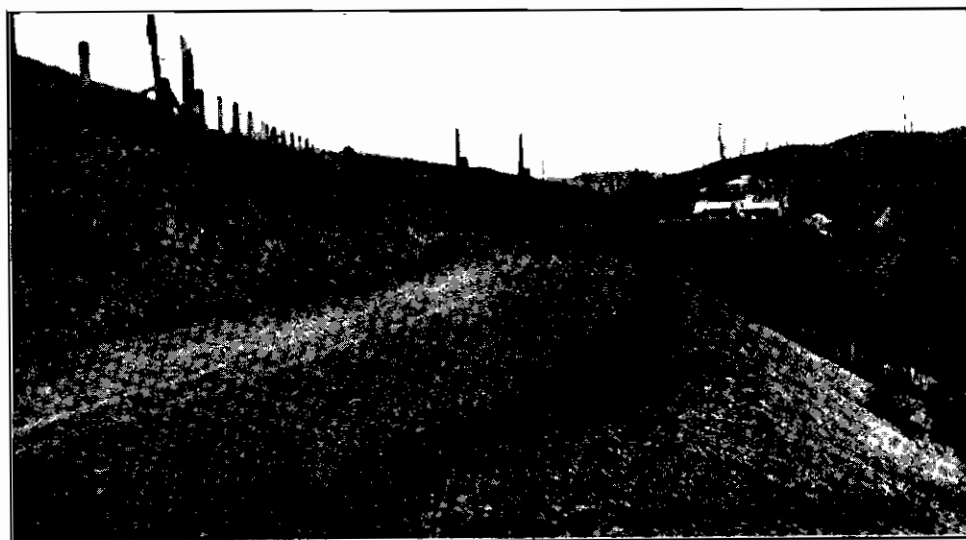

Warburton-road.—From Woori Yallock to Warburton, length 12½ miles, regraded and constructed throughout.

Point Nepean-road.—From Brighton through Mordialloc to Frankston, reconstructed throughout, length 16 miles.

Sydney-road.—Between Benalla and Glenrowan, in the Shire of Benalla, regraded and reconstructed.

On many other of the main arterial roads of the State important works have been completed, but they consist mostly of short lengths of construction or reconstruction necessary to link up existing sections of roadway already in fairly good condition.

In the construction of lateral and developmental roads in Gippsland and other parts of the State, where such roads are of prime importance, excellent progress has been made, taking into consideration the difficulties already referred to that have had to be contended with. Particularly is this so in the Shires of Phillip Island and Woolamai, Buln Buln, Warragul, Poowong and Jeetho, and Woorayl. In South Gippsland the most important work that is being undertaken directly by the Board is the construction

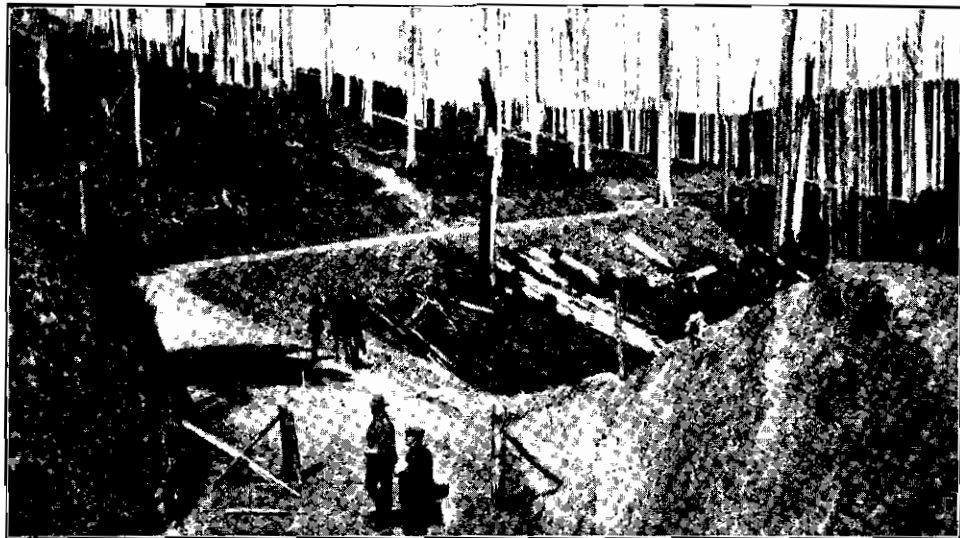

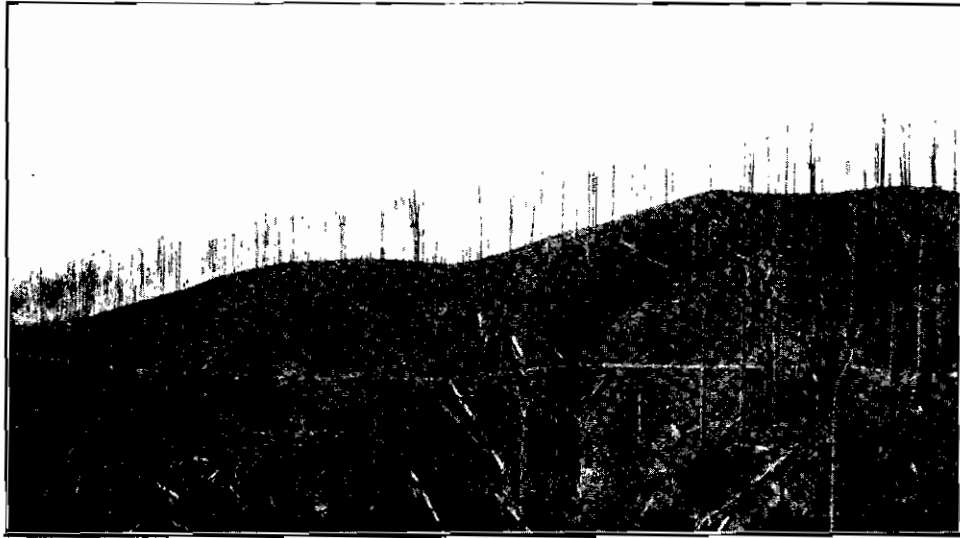

Road in the Hill Country.

Plate 1. Boolara-Welshpool Road at Budgerec.

of the road from Boolara to Welshpool. This consists of re-location and formation of 37 miles of road through some of the most broken country in Gippsland. Owing to the scarcity of labour in this part of the State, progress has been and will continue to be slow, consequently only such additional contracts can be let as may be within the capacity of the available labour in the district.

In the Board's First Annual Report, page 65, and in a Report to the Minister of Public Works in April of this year, special reference was made to the large number of old timber bridges and culverts throughout the State that required renewal or extensive repairs, and to the desirability of replacing or redecking these as the case requires, with more durable materials such as reinforced concrete.

Roads in the Hill Country.
Plates 2 and 3. Yarraon-Leongatha Road.

Plate 4. Ferntree Gully-Olinda Road (completed).

The following photographs will serve to illustrate the character of the work carried out under such circumstances. In every instance the new structure has replaced an old timber bridge that was either completely worn out or in such a state of decay that it would not have been economical to expend further funds in repairs.

Included in the appendices to this Report are a set of reproductions of drawings, showing details of construction and reinforcement of a suitable type of beam bridge which has been adopted by the Board for spans varying from 15 to 40 feet.

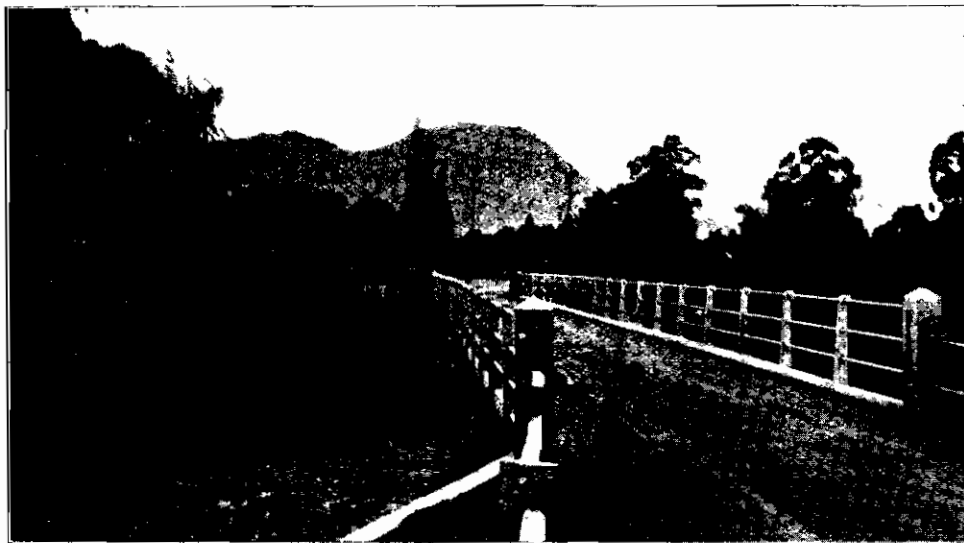

Plate 5. Taggerty Bridge, Alexandra Shire.

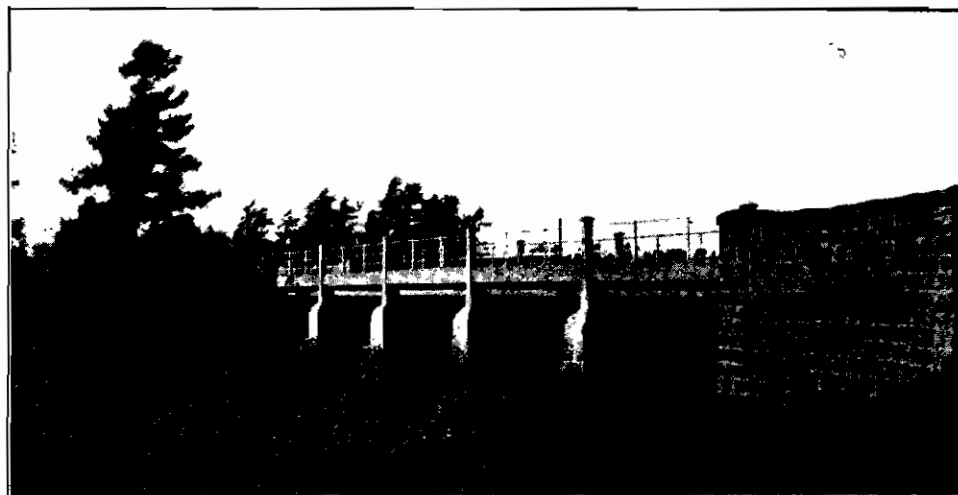

Plate 6. Deer Park Bridge, Melbourne-Ballarat Road, Braybrook Shire.

Plate 7. Culvert, Castlemaine-Bendigo Road.

EXPENDITURE ON PERMANENT WORKS.

The statement of expenditure on permanent works (Appendix C) shows a total expenditure for the year of £464,787 2s. 11d., chargeable to Loan Account, of which sum £44,725 6s. 8d. has been temporarily charged to the Country Roads Board Fund, to be subsequently transferred to Loan Account.

Plate 8. Yarrawonga Road, Rutherglen Shire.

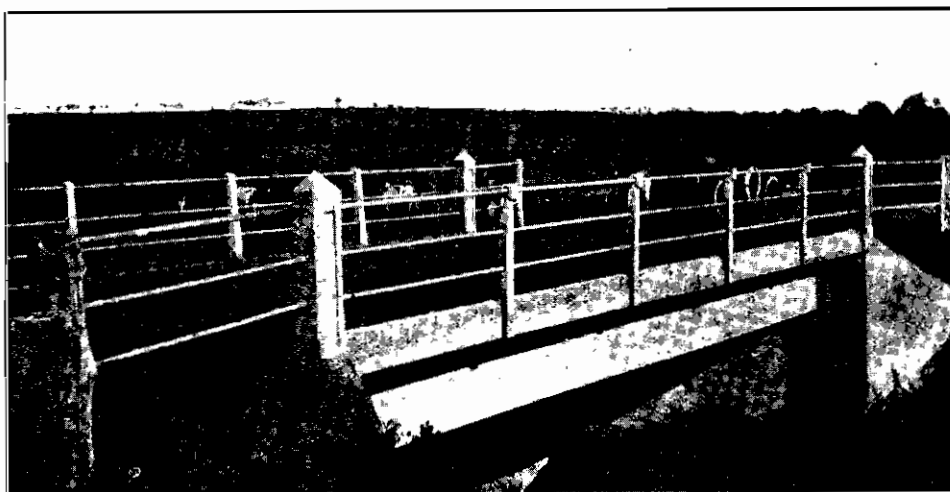

Plate 9. Melbourne-Ballarat Road, Bacchus Marsh Shire.

MAINTENANCE WORKS.

In Appendix "K" of the Board's First Annual Report the distinction between works of Maintenance and Permanent Improvements as defined by section 3 of the Country Roads Act was explained, and for the guidance of municipal engineers, general instructions were given for the preparation of specifications for the carrying out of works of maintenance and general repairs of main roads.

In some Shires where roads have been proclaimed and gazetted as main roads, the Council, in anticipation of works of "permanent improvement" being undertaken at an early date, have failed to maintain certain of the main roads, and consequently they are not now in as good a condition of repair, or to quote the words of the Act, these roads are not in the same "state of utility" as they were at the date of their declaration as main roads, although the Board has provided funds for their maintenance.

As the terms for repayment by the Councils of Loan Funds expended on permanent works which extends over a period of years are much easier than the terms for repayments of funds expended on road maintenance, which are a charge on the revenue of the shires during the year following the expenditure, there is a tendency in the case of some of the Councils to allow their roads to get into such a state of disrepair as to necessitate their reconstruction in the near future. This, however, cannot be permitted. In its preliminary inspections of roads the Board made careful notes of the "state of

utility" that every main road was in at the time of its declaration, and if it is found that they have been permitted to deteriorate from that date through neglect of maintenance, that deterioration will require to be made good out of maintenance funds, even if the restoration necessitates extensive repairs.

Apart from this aspect of the case, however, owing to existing financial conditions, the time when works of permanent improvement may be authorized cannot be forecasted, but as it is not desirable that the condition of the roads should be allowed to further deteriorate, Councils are advised to take advantage of the funds placed at their disposal by the Board from year to year, and provided for out of the Country Roads Board Fund for the maintenance, repair, or renewal of the surfaces of such of the main roads within their Shires as have been allowed to get into a condition of disrepair.

On page 56 of the Board's First Annual Report, under "Maintenance and Repair," it was noted that the term "maintenance," as applied to a road, means the carrying out of all operations necessary to prevent it from deteriorating, and that if maintenance be delayed the road will require to be "repaired," the extent of the repairs depending upon the extent to which "maintenance" has been neglected.

By the judicious expenditure of maintenance funds in the repair, patching or renewal of the surfaces of such roads as have been allowed to get into a condition of disrepair, they may be gradually brought up to such a good condition that the more expensive work of reconstruction may be postponed indefinitely. In other words, a bad road may be made a good one by a judicious system of repairs or partial renewals.

It may be that on certain roads the extent of the necessary repairs is such that the cost of making good the whole length of a road in one season would be beyond the financial resources of the Shire, but if the work of renewal were systematically practised by taking in hand and making good a section of the road each year, its complete restoration to a good trafficable condition would be effected without unduly encroaching upon the Shire's revenue in any one year.

EXPENDITURE ON MAINTENANCE.

The total expenditure for the year under this heading as affecting municipalities amounted to £98,878 13s. 8d., and is shown in detail in Appendix "C."

APPORTIONMENT.

The apportionment of the amount expended on permanent works and maintenance during the financial year 1914-15 was made before the 1st January of the calendar year 1916, in accordance with the requirements of Section 27 of the Country Roads Act, resulting in a debit to municipalities of £1,784 18s. 2d. on account of interest and sinking fund on permanent works, and of £24,943 18s. 8d. on account of maintenance, which amounts were duly received and credited to the Country Roads Board Fund. The apportionment showing the amounts debited to each municipality is set out in Appendix "B."

ROAD MAKING MACHINERY.

In the Board's First Annual Report, pages 61-64, it was affirmed that roads could not be built to meet the requirements of modern traffic without efficient road-making plant, and some general hints were given as to the most desirable features to be looked for in the different machines.

With the existing scarcity and ever-increasing cost of skilled labour, the only direction in which reasonable economy can be looked for in works of road construction is in the skilful and intelligent application of mechanical appliances specially adapted for the work.

Mr. Harold Cox, M.A., in an address on "Industrial Development," in March, 1915, stated—"By a more extended use of machinery and a more scientific use of human muscles we can secure, on the one hand, a greater output of work with a diminished cost of production; on the other, higher wages for the worker with less physical exertion; those are the ideals for the industrial development of the future."

In the Second Annual Report reference was made to the gratifying fact that a considerable number of Shire Councils had acquired machinery, such as road rollers, scarifiers, rock-breaking and grading machines, &c.

It does not necessarily follow, however, that the possession of machinery will be productive of efficiency and economy. The plant should be not only suitable for its purpose, but must be carefully and judiciously managed, if its best service is to be forthcoming. A machine, like an animal, responds to careful treatment, and often the machine is blamed for failure when the fault lies with those in charge.

The road-making plant should be judiciously selected in order to obtain its maximum efficiency. As the locality of the work on country roads is constantly changing, and particularly where stone deposits are widely distributed, portability of the different units of the road outfit should be aimed at.

The road roller is usually the controlling unit of the plant, and the capacity of the stone crusher should be sufficient to keep the roller fully employed. As a steam or oil driven roller of 10 tons in weight will consolidate from 60 to 80 tons of road metal per day, the crusher output should not be under that quantity. For ordinary Shire requirements a crusher capable of an output of 70 to 80 tons of broken stone per day will generally be found a useful size. Stone breakers with steel frames are lighter and generally stronger than those of cast iron. It will usually be found economical for the working parts, and particularly the jaw faces, to be of manganese steel, particularly where the stone to be broken is hard, and it is not advisable to retain the jaw plates in use after the faces have worn smooth, or the cubical quality of the metal will suffer.

When in position a portable stone breaker should not be worked on its own wheels, but should be fixed as rigidly as practicable by blocking up with timber or other means in order to minimise vibration and the tendency to get out of line, which is prejudicial to the satisfactory working and life of the plant.

The most intelligent and efficient men obtainable should be employed to operate and work machines such as road rollers, tractors, and stone breakers—even if the wages paid are somewhat in excess of normal rates for this class of skilled labour.

The keeping of costs in the various processes involved in producing road metal is a valuable aid to shire engineers in enabling them to ascertain in what direction economies can be effected in quarrying, crushing, and transporting stone to the roads.

By the adoption of such a system of costs keeping, combined with the careful supervision and judicious management of the municipal road-making outfits under their control, the engineers of the adjoining Shires of Corio, Bannockburn, and Buninyong have achieved excellent results. In each of these Shires the cost of breaking, carting, and spreading metal on the roads has been brought down to the highly satisfactory figure of 2s. 5d. per cubic yard.

The Shire Engineer of Corio reports that by the use of the spalls elevator, illustrated on Plate 10, the wages of two men are being saved, older and less active men can manipulate the trucks, and the crusher is being kept fed to its fullest capacity. The Shire

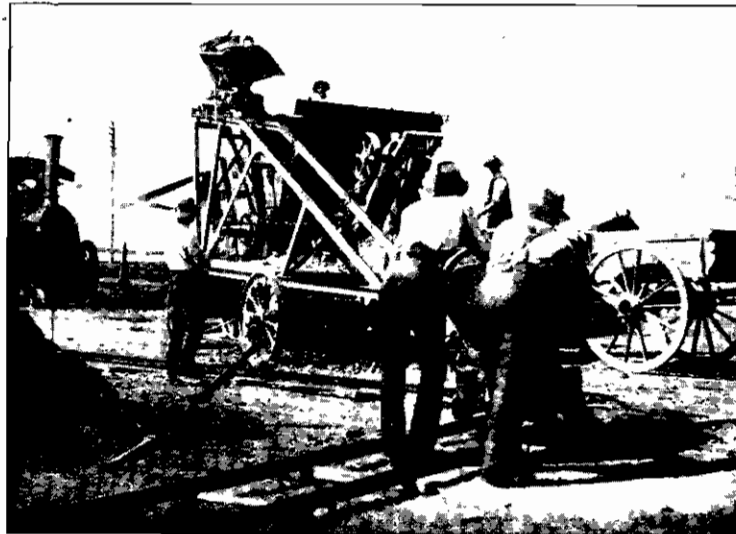

Plate 10. The Spalls Elevator saves the wage of two men ; older men can work the trucks and the crusher is better fed. Elevator with three trucks and rails complete cost £200.

Engineer of Bannockburn reports that, prior to 1912, the cost of hand-broken metal in the Shire was 8s. 6d. per cubic yard, in that year the Shire purchased a stone-breaking plant which has been systematically added to, and notwithstanding the increased cost of spalls, road metal is now being produced and spread for 5s. 2d., representing a saving of 3s. 4d. per yard.

The Shire Engineer of Buninyong, by close attention to the working of the Shire plant during the past year, reduced the cost of breaking, carting, and spreading metal from a fraction under 2s. 8d. to 2s. 5d. per cubic yard.

It may be that similar economies in management have been effected in other Shires, details of which have not been reported to the Board.

On page 75 of the First Annual Report, Shire Officials were invited to furnish particulars for future publications of any instances of successful methods of treatment of road materials which, in their experience and practice, have proved economical and otherwise advantageous, and the Board will be pleased if similar returns to those furnished by the Engineers of the Shires already referred to can be supplied by other Engineers for the information of their *confreres*.

MOTOR CAR REGISTRATIONS.

The number of motor cars and motor cycles registered under the Motor Car Act at the beginning of the year was 8,189, and 7,139 respectively, or a total of 15,328. During the year the number increased to 17,848, of which 10,051 were cars and 7,797 were cycles, and produced a net revenue of £41,535 16s.

THE BOARD'S STAFF AND THE WAR.

It is with pride and pleasure that the Board desires to record the fact that one of its members, Major McCornack, has placed his services at the disposal of the Empire.

Major McCormack left for the front on the 21st June last, in command of the 10th Field Company Engineers, accompanied by three additional members of the Board's staff, viz. :—Lieutenant Moore, Lance-Corporal Graham, and Sapper Kerry.

APPENDICES.

Particulars as to permanent works constructed and roads maintained, and an account of all moneys received and expended during the year, statements of contracts &c., are shown in Appendices.

W. CALDER, Chairman.

F. W. FRICKE, Member.
