COUNTRY ROADS BOARD.

SIXTH ANNUAL REPORT.

Melbourne, 30th November, 1919.

The Honorable F. G. Clarke, Minister of Public Works, Melbourne.

SIR,

I have the honour to submit to you the Sixth Annual Report of the Board's proceedings, in accordance with the requirements of Section 73 of the Country Roads Act No. 2635.

The operations and activities of the Board have continued during the year on lines similar to those of previous years as regards main roads, but supplemented very largely by the greatly increased responsibility incidental to the selection and subsequent construction of developmental roads under Acts Nos. 2944 and 2985, and subject to the difficulties and disadvantages arising from the war.

During the war period, many important works were held in abeyance in the hope that, with the advent of peace, there might be a more plentiful supply of labour and a reduction in the high cost of materials required for road and bridge construction.

This hope, however, has not been realized. Not only is the supply of labour and material still inadequate, but the cost of both has materially advanced since the signing of the armistice.

This instability of the markets as regards labour and material, together with the shortage and uncertainty of supply of the latter through industrial unrest, has in a marked degree militated against the progress of works, as many contractors have become nervous and decline to tender under such conditions.

In a number of instances, however, where works were carried out directly by the Board, the day-labour system has been adopted, and several Shire Councils have also adopted the system to a limited extent, with satisfactory results.

Loan expenditure on main roads during the year amounted to £284,734 7s. 11d., as against £226,599 2s. 2d. for the previous year.

The expenditure in maintenance amounted to £179,132 17s. 7d., compared with £173,785 12s. 10d. for the year 1917-18.

DEVELOPMENTAL ROADS.

The provision of £2,000,000 by Parliament has enabled the Board, in conjunction with Shire Councils, to enter upon an extensive scheme of road development, especially in the newly settled and less developed portions of the State. Every road selected for improvement under this scheme has been previously inspected by at least two members of the Board, in company with the Shire Councillors and Engineer representing the area.

Investigations of this nature of necessity occupy a great amount of time, but they are found to be essential, as many proposals are submitted which upon examination are proved to be of insufficient importance either from the point of view of the number of settlers to be served, or the character of the country and its potential development to justify the expenditure of loan funds upon them.

In considering proposals for developmental roads, the examination of those submitted must, therefore, be of a more detailed and minute character than the selection of main roads, which were recognised as main traffic arteries and on which the provision for traffic already existing was the chief consideration.

In determining the class of road to be brought under this scheme, all factors bearing on future development and permanent occupancy are carefully considered, including the class of country to be developed, the number and extent of holdings, the nature of occupancy, whether for grazing, agriculture, horticulture or dairying, the possibilities of increased settlement, and the existing facilities for reaching the railway system.

In travelling throughout the State the Board has been much impressed with the condition, and in many instances, the almost primitive state, of the roads leading to the railways. A typical instance of this may be mentioned in the case of the railway from Birregurra to Forrest. It is just thirty years since this railway was opened to traffic, and yet at this date it can be stated that there is not a single station or siding on the line that has a road that could be classed as a serviceable road leading to it. Conditions similar to this exist through Gippsland. But it is not only in these comparatively newly settled districts that no attempt appears to have been made to supplement the railway system with trafficable roads. Similar conditions prevail in the north-eastern District, through which the Melbourne to Sydney railway line has operated for so many years. Between Seymour and Albury there are nineteen railway stations, and beyond a short distance from the railway line there is scarcely one road worthy of the name, or that meets the requirements of the district.

At the date of this report, 192 roads have been so selected, affecting 43 shires. Of these roads, 69 are in course of improvement, affecting 28 shires, the expenditure to the 30th June being £47,561 10s. 4d.

As to the remainder, authority has been given for the necessary surveys and preliminary work incidental to the preparation of contract plans and specifications.

CONCRETE ROADS.

When the Board was appointed in 1913 it gave early and careful consideration to the question of the character and standard of road to be adopted, and the first report presented to Parliament contained the following paragraphs:—

Page 44.—“ Considering the immense mileage of roads awaiting construction in the country, the choice of road-making materials must be limited to broken stone or gravel for many years to come, if only for reasons of economy. The rate of increase of motor transport in the future cannot be predicted, as the increasing reliability of these vehicles, together with an improvement of the roads, will tend to encourage their use for transport of produce. It would appear desirable to anticipate this traffic by making the best possible use of the materials available, and the provision of reasonable sound foundations on the main traffic routes.”

Page 58.—“ As regards the great majority of the country roads, however, where so many miles of tracks are in urgent need of improvement to render them even passable for ordinary farm vehicles, any special treatment for modern forms of traffic would be out of the question in view of the funds available for road construction.”

“ It would not only be wasteful to construct roads in outlying districts to a standard above present traffic requirements, but an injustice to the many out-back settlers who would welcome a metalled road of any description as a luxury.”

“ Only on certain main traffic thoroughfares radiating from Melbourne and carrying a considerable motor traffic, will any special provision be made at present to render them suitable for, and less liable to damage by, this traffic.”

“ One such thoroughfare—the Point Nepean-road, between Mordialloc and Frankston—is proposed to be surface-dressed with tar during next summer, such treatment being the cheapest and therefore the only method of bituminous surface-dressing the Board feels warranted in undertaking, and this mainly in the interest of the life of the road.”

Anticipating the rapid development of self-propelled vehicular traffic and the consequent probable revision of the standard as regards certain heavily trafficked roads, and being aware of the extensive employment of concrete for main traffic highways in America, the Board appointed to its staff Mr. T. H. Upton, B.C.E., M.Sc., a highly qualified Engineer in reinforced concrete construction. Mr. Upton was then in England, and as he was returning to Australia almost immediately, he was commissioned by the Board to return *via* America to investigate and report upon the then existing methods of concrete road and bridge construction, to study the various types of bituminous binders, and to purchase machines for the testing of road materials.

The outbreak of war, however, prevented Mr. Upton from executing his commission at that time, as he enlisted in England and served throughout the war with the Royal Engineers, gaining the distinction of O.B.E.

On the signing of the armistice and his demobilization, he proceeded to America, and the result of his investigations as to the development of concrete road construction in that country is embodied in an interesting and informative report to the Board.

After considering his report, together with recent literature from America and elsewhere on the subject of concrete roads, the Board is convinced that the standard adopted by it seven years ago to meet the requirements of this State for country roads was the most suitable, and even at this period the Board is satisfied that the conditions of traffic either now or in the near future would not justify any radical departure from it.

As pointed out in a previous report, the probable increase in motor traffic cannot be foretold. There is no doubt that it is increasing rapidly, especially in the light motor or pleasure vehicle class, but the increase in the use of heavy motor vehicles for the haulage of produce during the past five years has not been sufficient to justify any alteration in the standard of road construction, while its probable increase in the future is dependent more upon the prime cost of the vehicle and of motor spirit than it is upon improved road surfaces or foundations.

A few years hence may witness a great change in these conditions, and result in a more general use of the self-propelled vehicle, when a revision of the standard might be warranted. In the meantime, however, the Board intends laying down a trial section of concrete on one of our heaviest trafficked roads, with a view to testing it under heavy iron-tired traffic conditions.

Iron-tired traffic is here mentioned, because on all our roads of heaviest traffic, the iron-tired vehicle largely predominates.

Though concrete is being so extensively employed for highway construction in the United States, and has been adopted as the standard road in certain States, *e.g.*, California, it cannot be said that it has completely solved the problem of permanent road construction, and even at this date there is considerable divergence of opinion amongst qualified road engineers as to the measure of its success, its probable effective life, and its economic value.

It is generally conceded that, where the traffic is borne on rubber shod wheels, concrete is the ideal road surface.

On the authority of Mr. Austin Fletcher, Highway Engineer for California, the iron shod traffic in that State has decreased by 75 per cent. in the last few years, which fact probably justified the adoption of concrete as the standard road in that State, where there is a contemplated expenditure of £40,000,000 in the construction and improvement of roads, but it is doubtful if concrete would have constituted the standard road if adequate supplies of suitable road-making material in the form of stone for macadam or gravel roads had been available.

A factor which tends to cause hesitation in the adoption of concrete for road surfaces is the uncertainty of the behaviour of this material, even if carefully constructed to approved standard specifications, under expert supervision.

In an article by Mr. L. M. Sandston on "The Status of Concrete Highway Construction in the United States," the following pertinent statement appears:—

"It is not an exaggeration to say that, in so far as the public has knowledge of the subject, no engineer can truthfully state that he can build a mile of concrete road under recommended practice and foretell with absolute accuracy what will be the condition of that road at the expiration of two years."

Mr. Upton indorses this statement.

One of the chief reasons given for the wisdom of adopting concrete as a road surfacing material is the alleged low cost of maintenance.

If, however, the experience of the Board of County Road Commissioners of Wayne County, Michigan, in connexion with the repairs to the Grand River Road, as set out in the Annual Report of 1916, be of frequent occurrence the maintenance costs of concrete roads are not as low as generally claimed for them.

Wayne County is probably the pioneer body in America for the extensive employment of concrete as a road surfacing material.

The section of the Grand River Road referred to was constructed in 1910, and after a period of six years re-surfacing was found necessary, at a cost of \$2.49 (approximately 10s. per square yard).

It is, however, stated in the report that the high cost of repairs was due to untoward conditions at the time the work was undertaken.

The average cost of concrete roads, 16 feet in width, in the United States in 1916 was stated to be approximately £2,400 per mile, but in that country cement was cheap, whereas in Australia under present conditions of labour and materials the cost of building concrete roads would be at least double the cost of similar roads in America.

Concrete roads have not been adopted in Great Britain to any extent, and in Canada they have been used less for highways than for residential city streets.

APPORTIONMENT OF COST.

The apportionment of the amount expended on permanent works and maintenance during the financial year 1917-18 was made as usual in accordance with the requirements of Section 27 of the Country Roads Act, resulting in a debit to municipalities of £2,108 8s. 2d. on account of interest, and £86,878 13s. on account of expenditure in maintenance, which amounts were duly received within the time specified, with the exception of the quota due and payable by the City of Bendigo, amounting to the sum of £433 1s. 2d.

During the financial year 1917-18, the Board was granted a special loan of £100,000 under Act No. 2938 to temporarily supplement the Country Roads Board Fund to enable it to meet maintenance expenditure, for which inadequate provision had been made under the Country Roads Act. Of this sum £80,000 was availed of.

As the Fund has now been placed upon a satisfactory footing through the financial provisions of the Tramways Act and the increasing revenue derived from the registration of motor vehicles, the Board has been enabled to recoup to the Treasury during the year a sum of £30,000 and anticipates being in a position to refund a further sum of £30,000 during the next financial year.

MOTOR CAR REGISTRATIONS.

The number of motor cars and motor cycles registered under the Motor Car Act during the year, including renewals, was 26,520, of which 16,149 were cars and 10,371 were cycles; the net revenue received, including fines and licence fees, being £67,665 16s. 7d.

APPENDICES.

Particulars as to permanent works, both on main and developmental roads and main roads maintained, an account of all moneys received and expended during the year, &c., are shown in Appendices.

I have the honour to be, Sir,
Your obedient servant,

W. CALDER, Chairman.

W. McCORMACK, Member.

W. L. DALE, Secretary.
