# COUNTRY ROADS BOARD.

---

Melbourne, 31st December, 1924.

*The Honorable G. I. Goudie, M.L.C., Minister for Public Works, &c., &c.*

SIR,

I have the honour to submit to you, in compliance with the provisions of Section 73 of the Country Roads Act, No. 2635, the Eleventh Annual Report of the proceedings of the Board, to the 30th June, 1924.

## INCREASING RESPONSIBILITIES OF BOARD.

I desire to draw attention to the fact that when the Board was appointed, in 1913, its responsibilities were then restricted within the defined limits of the Principal Act, No. 2635, relating to the construction and maintenance of main roads, and the outstanding feature of that Act was that, subject to certain reservations in Sections 23 and 24, the actual work of construction and maintenance was to be entrusted to local authorities.

As far as considered practicable, economical, and efficient, this policy has been adhered to, and fully 90 per cent. of the work of construction and maintenance has, hitherto, been carried out by the municipal authorities, in accordance with standards, types of construction, and principles laid down by the Board.

Subsequent legislation, however, relating to the construction of developmental roads, and other legislation making provision for the construction of roads in remote parts of the State, have greatly increased the work and responsibilities of the Board, and it is evident, especially with regard to maintenance of main roads, owing to the almost revolutionary change in the character of traffic during the last few years, necessitating the use of bituminous material, and the employment of highly skilled workmen and expensive machinery in its application, which the great majority of our rural municipalities are financially unable to supply, that an increasing proportion of the work of maintenance will require to be undertaken in the future directly by the Board. This will apply more particularly where traffic concentrates in the vicinity of centres of population.

It is being found expedient to carry out a very considerable proportion of the work in remote districts by the direct labour system. This involves the employment of many large gangs of workmen, engaged through the Central Labour Bureau. It will, therefore, be readily seen that works of this character can best be undertaken by one central authority, under the direct supervision of its own officers.

The Highways and Vehicles Act, No. 3379, passed during last session of Parliament, which provides for the declaration of State highways to be maintained by the Board on behalf of the State, and which will become fully operative on the 1st day of January, 1925, has already increased very considerably the administrative responsibilities of the members of the Board and of its staff, not only with regard to the organization for the maintenance of the selected highways, but also for their protection, by regulating the loads and speed of heavy motor vehicles.

In connexion with the maintenance of State highways and declared main roads, which has become the most important side of our road problem, it has been decided, with a view to the inauguration of an effective continuous system, such as exists in other countries, and in order to overcome the apathy of Municipal Councils in this connexion, to appoint a specially qualified Engineer, with a trained staff of District Supervisors.

Their duties will embrace the organization of a system for the effective maintenance of State highways and for the regular inspection of constructed main roads under the control of local authorities. Hitherto, with the limited funds available, and an insufficient staff, this has not been possible.

This action is being taken owing to the present unsatisfactory condition of many of the roads, and in view of the increased financial responsibility placed upon the Board in respect to maintenance by the Highways and Vehicles Act, by which the State's contribution has been increased from one-half to two-thirds, while that of the local authority has been reduced from one-half to one-third.

It may be mentioned that expenditure under the Board's direction and supervision is now carried out under the following headings :—

1. Main Roads.
2. Developmental Roads.
3. Federal Assistance for Main Developmental Roads.
4. Roads to develop Tourist Resorts.
5. Unemployed Relief (special provision for road works).
6. State Highways.
7. Roads in Metropolitan Area and Country Centres [under Highways and Vehicles Act (special provision)].
8. Roads to Isolated Settlers (Appropriation Act).
9. The Great Ocean Road for the Ocean Road Trust.

While the Board cannot but feel gratified that it has gained the confidence of successive Governments and Parliaments in being thus entrusted with so much additional responsibility, the whole of which, with one exception, has for its object the development of the rural districts of the State, it feels in justice to itself that, in the consideration by the Government of the question of deciding as to which body is to be charged with the important problem of metropolitan bridges, streets, and roads, the particular purpose for which the Board was created by Parliament, namely, the construction and maintenance of country roads, in co-operation with country municipalities, should be particularly borne in mind, because it is felt that the country roads problem, upon which the successful settlement and development of rural districts and the growth of country towns so largely depends, is, by itself, of sufficient importance to command the undivided attention and study and the whole of the energies of the Board and its staff.

## MAIN ROADS.

### PERMANENT WORKS.

At the beginning of the financial year 1923-24, the period under review, the whole of the authorized Loan Funds, amounting to £3,000,000, had been allocated, and liabilities incurred for the whole of that amount.

Fresh legislation was, however, introduced in December, 1923—Act No. 3334—when additional Loan Funds, amounting to £1,000,000, were authorized.

It was unfortunate, therefore, that almost immediately afterwards financial considerations beyond the control of the Government demanded the temporary suspension of new constructional work, with the result that the Board was not in a position to authorize or to enter upon any new works of construction on main roads during the financial year.

Liabilities on existing contracts, entered into during the preceding year, were provided for amounting to £201,615 6s. 9d., and this represents the total expenditure on permanent works for the year (see Appendix "C").

Although permanent works were so much restricted, some very important bridge construction works were either entered upon or completed during the year.

In Hampden Shire an old timber bridge over Mount Emu Creek, on the Prince's Highway, has been replaced by a reinforced concrete structure of the same length (see Plate No. 1). The new bridge, which is 20 feet wide, contains five spans of 34 feet. Concrete piles 30 feet long were required in the pier foundations of this bridge. The piles were successfully driven to a very small set, affording a firm foundation for the rigid frames comprised by the columns and superstructures.

Provision for expansion is made by 2-in. gaps extending across the structure for the full height above the footings of those piers adjacent to the abutments. At each end of the bridge the five beams of the superstructure are fitted with bearing plates resting on a steel rail secured in the abutment. This gives the effect of a pin joint, so that the bending of the long beams under load does not add to the foundation pressure of the abutments.

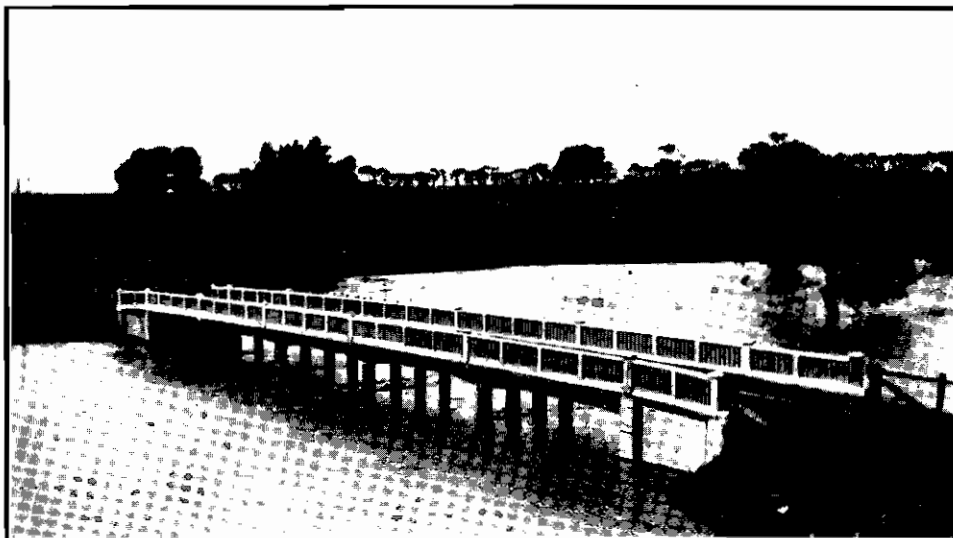

PLATE No. 1.

McKinnon's Bridge, over Mount Emu Creek, Prince's Highway, Shire of Hampden.

At Elmore (Shires of Huntly and Waranga) the Campaspe River is crossed by a bridge 550 feet long. This contained seven composite truss spans of 50 feet, which had been seriously neglected, and ten timber stringer spans of 20 feet, which were very old and unstable. Although many years of the life of the truss portion had undoubtedly been lost by poor design and lack of attention, the trusses were still capable of being straightened up and stiffened at moderate expense, so that they would remain useful for a further period, estimated at twenty years. The stringer portion, however, required immediate renewal. A class of construction was desirable, such as to minimize the period of interruption to traffic. Moreover, any permanent work on this portion required to be of a type that could be readily raised when the truss portion reaches the end of its life, because the present deck level is less than 2 feet above high flood level. For these reasons as well as to give spans with adequate waterway and of economical length, the renewal was effected with mass concrete substructure, carrying 24-in. steel joists, 38-ft. span (see Plate 2). The new piers and abutments are founded on timber piles, and the five steel joists of each span support 5-in. timber deck. Over the whole bridge, which has a clear width of 18 feet, an 8-ft. central strip of 2-in. longitudinal wearing surface was placed. This proved very effective in eliminating the previous heavy impact on a vibration of the trusses under vehicle loads.

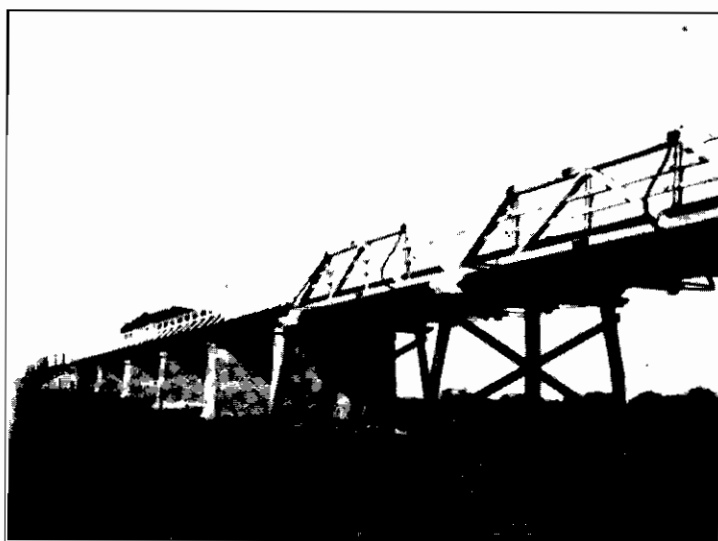

PLATE No. 2.

Elmore Bridge—Shires of Huntly and Waranga.

The largest contract entered into by the Board since its inception is that for the erection of a new bridge over the Barwon River, on the Prince's Highway, between the City of Geelong and the Shire of South Barwon.

The existing iron bridge, with its embanked approaches, was erected in the years 1856–58 by a series of contracts under the Central Road Board, to replace a low-level timber bridge which had been swept away in a large flood in May, 1852.

The superstructure (see Plate 3) was of "through" type, in two spans of 208 feet, each consisting of two wrought-iron "box" girders, 13 feet deep, giving a roadway width of 22 feet. These girders are of historic interest, having been originally designed for use in military bridging in the Crimea. Two other portions were erected about the same time, one at Church-street, Richmond, over the Yarra River, and the other at Footscray, on the railway crossing over the Maribyrnong River. Both these portions have now been removed, and replaced by modern structures.

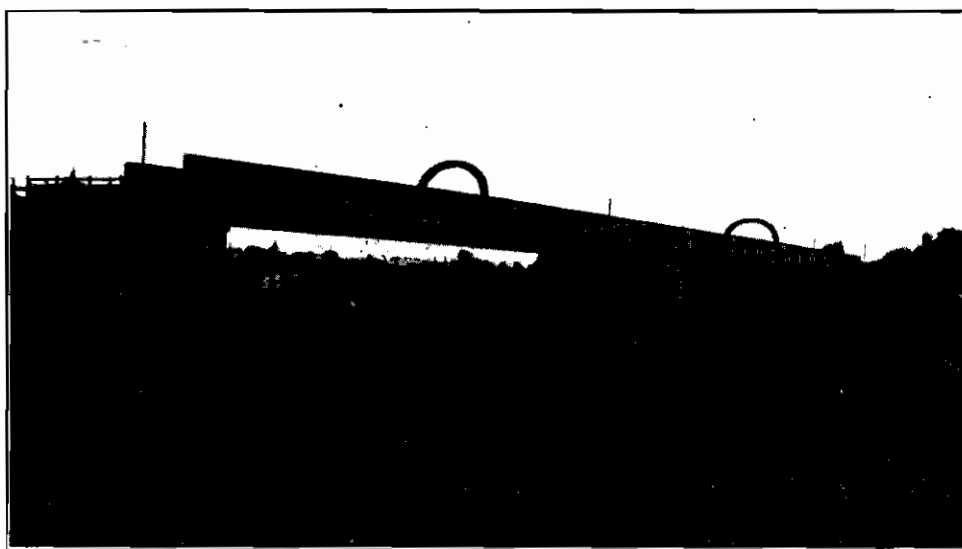

PLATE No. 3.

Barwon Bridge, now being dismantled.

The Barwon bridge had become much shaken and weakened, owing to natural deterioration of the iron superstructure, and, in view of its vital importance as the portal of the main road from Geelong to the Western Districts, a very careful survey and a special engineering examination were made. The reports so obtained showed that, while the substructure was in good condition, the main girders were defective, and the cross girders, carrying the timber deck, were quite inadequate for heavy traffic.

A desired extension of the Moorabool-street tramway across the bridge to Belmont was, therefore, found to be impossible, and this factor—coupled with the necessity for a stronger and wider structure to cope with the increased weight and volume of general traffic—called for urgent consideration of the policy to be adopted in strengthening or renewing the structure. Temporary relief was obtained by laying a course of tarred macadam on the deck, thus effecting considerable reduction in the vibration of the bridge under ordinary loads.

After due consideration by the Board and other authorities concerned, a proposal for calling for competitive designs for a new structure was abandoned in favour of the systematic investigation of the problem and final preparation of plans by the Board's staff.

Preliminary investigations for the selection of the most suitable type of reconstruction were completed early in 1921, and an outline design was adopted, providing for a new plate girder superstructure of the "deck" type, using, as far as possible, the foundation portions of the existing substructure. As the final design proceeded, many desirable modifications in the tentative outlay were made, also necessary negotiations were carried on with the authorities controlling various public utilities, the work being completed during 1922. The comprehensiveness of the finished plans and specifications obtained by this method of procedure satisfactorily established a sound and definite basis for competitive tendering.

The new structure will contain four spans in place of two, with heavy steel-plate girder superstructure and reinforced concrete slab deck. The new substructure above the old foundations, and the two new piers, will be constructed of mass concrete. At the new pier in the main stream the course of the river is to be straightened and widened. The bridge approaches are to be widened from 40 feet to 60 feet, inclusive of footpaths, and the width of the roadway on the bridge is to be increased to 33 feet, and, in addition, two footways, each 5 feet wide, will be provided for.

The successful tenderers for the new structure are Armstrong-Whitworth Pty. Ltd., at £73,900.

## MAINTENANCE.

The expenditure in maintenance for the year, which amounted to a total of £343,233 6s. 5d. (see Appendix "C"), over a length of approximately 6,715 miles, or an average of £51 per mile, shows a gratifying increase of £55,104 2s. 8d. over the previous year, and, although this increase in expenditure by municipalities is commendable, it is still fully 50 per cent. below traffic requirements.

As previously mentioned, it has been found necessary that an increasing length of main roads, subject to metropolitan traffic, although beyond the metropolitan area, should be treated with bitumen or tar. The municipalities concerned, however, have not yet equipped themselves with the necessary mechanical appliances for carrying out this form of road maintenance. Consequently, the work has, of necessity, had to be undertaken by the Board's staff. The length of road thus treated during the year totalled 100 miles, an increase of 50 per cent. over the previous year.

In this class of maintenance work it has been the practice hitherto to use coarse basaltic screenings and sand as an aggregate, but during the past year more satisfactory results have been obtained by the use of clean quartz gravel, which can be obtained by rail in unlimited quantities from the old mining centres and at lower cost than crushed basalt.

The method now adopted in applying the gravel to the sprayed tar or bitumen is to use just sufficient in the first application to give an effective covering, or about 80 cubic yards per mile for a 15-ft. roadway, and to add further light coatings to the extent of about 40 cubic yards per mile during hot weather. This "feeding" process ensures that the bitumen absorbs the maximum quantity of aggregate, which cannot be satisfactorily accomplished in one spreading operation. For the information of municipalities it may be mentioned that to carry out this operation successfully and quickly, where a considerable length of road is to be treated, the plant necessary is one tar-spraying machine, two heaters, each of 800-gallons capacity, one steam or motor roller, of about 10 tons, and one horse-drawn road broom.

The bitumen used by the Board is in accordance with the following specification:—

1. The material shall be a homogeneous mixture, free from water and other injurious substances, and shall not foam when heated to 400° F. (204° C.).
2. The penetration with a No. 2 needle and 100 gmm. weight shall be between 60 and 70 mm. in five seconds at 77° F. (25° C.).
3. The flash point (open cup method) shall be not less than 400° F. (204° C.).
4. The loss of weight on heating 50 gmm. for five hours at 325° F. (163° C.) shall be not more than 2 per cent., and the penetration of the material, after such heating, shall be not less than 60 per cent. of the penetration of the material before heating, as found above.
5. The ductility of a section 1 cm. square at 77° F. (25° C.), when stretched at the rate of 5 cms. per minute, shall be not less than 50 cms.
6. The softening point (ball and ring method) shall be between 130° F. and 150° F. (54° and 66° C.).
7. Not less than 99 per cent. of the material shall be soluble in carbon tetrachloride.
8. Not less than 70 per cent. nor more than 90 per cent. shall be soluble in paraffin naphtha.

The analysis of cost of the work carried out by the Board shows that 1 gallon of bitumen covered 4.4 square yards, 1 cubic yard of gravel covered 64.3 square yards, at a cost of 5.49d. per square yard of road surface.

## DEVELOPMENTAL ROADS.

### CONSTRUCTION.

The total expenditure for the year under this heading amounted to £467,329 3s. 2d., as against £627,092 11s. 4d. for the previous year (see Appendix "D").

As in the case of main road construction, the reduction in expenditure was due to the fact that no new work was entered upon after the 31st January, 1924—the most suitable season for construction—consequently the expenditure of £467,729 3s. 2d. represents contracts let during the first six months only, and liabilities on contracts carried forward from the previous year.

Practically the whole of the works represented by this expenditure were carried out by the Shire Councils, under the contract system. In a few instances the direct labour system was resorted to, as it was found impossible to obtain tenders within a reasonable margin of the estimate.

The works were well distributed throughout the State, 96 shires participating.

In previous years the greater proportion of expenditure was incurred in earth formations and the necessary culverts and bridges, but during the present year a larger proportion has been expended on the finished road surfaces, consisting of either metal or gravel, thoroughly consolidated.

For the interests to be served by the class of road described as "developmental" it is considered that this type of road will meet all requirements, and, in the opinion of the Board, amply fulfils the intentions of the Developmental Roads Act.

In several instances, after roads of this class have been completed, municipalities have asked the Board to provide a tarred or bituminous surface, but it is considered that such refinements should be carried out by and at the expense of the municipality, and that the funds at the disposal of the Board should be reserved for the provision of roads in districts where the settlers have not even the luxury of a properly-graded earth formation.

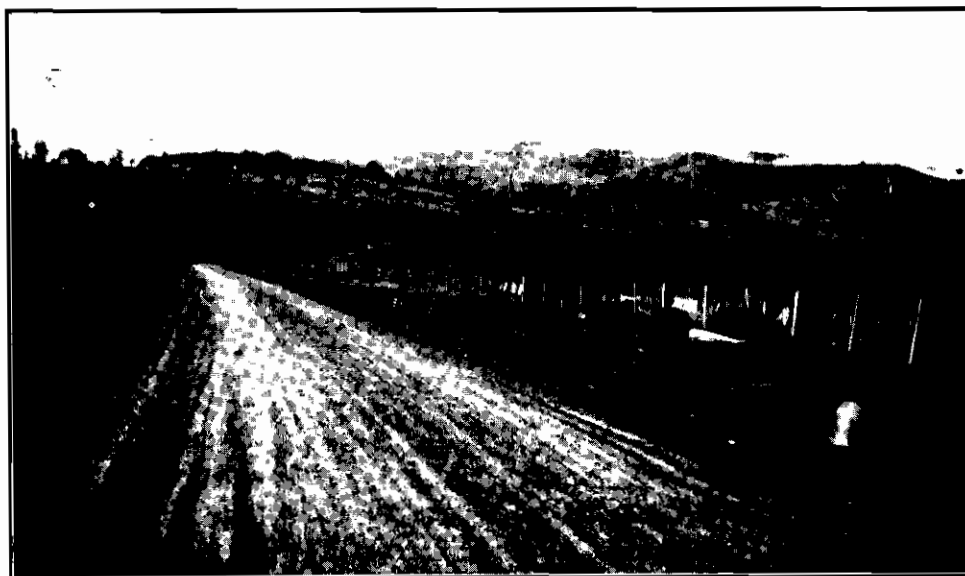

PLATE No. 4.

Showing types of Developmental Road in dairying districts with heavy rainfall—Metal surface.

In Bright Shire a reinforced concrete arch of 55-ft. span has been erected over the Ovens River, on the Harrietville Road. At this site the river has cut for itself a rocky gorge among the hills, so that the arch type is both economical and also well suited to the surroundings (see Plate 5).

The arch is 21 inches thick at the springing, and 9 inches at the crown, the depth of filling over these points being 16 feet and 2 feet respectively.

The spandrel walls and the wing walls are both tied across through the filling with rigid reinforced concrete ties. The roadway width is 16 feet.

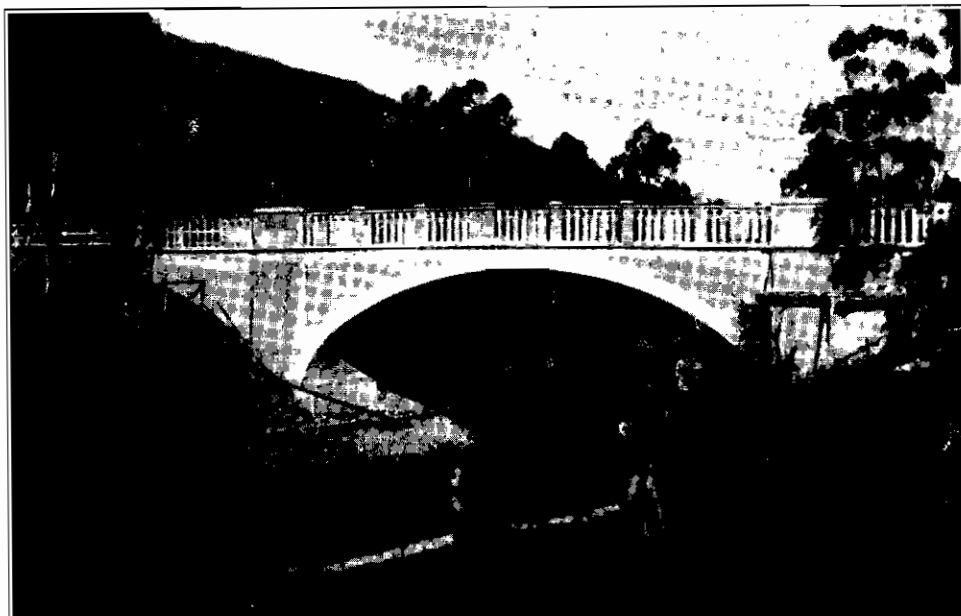

PLATE No. 5.

Bridge over Ovens River, Harrietville-road, Bright Shire.

Type of Reinforced Concrete Bridge suitable for picturesque mountainous district.

## FEDERAL STATE GRANT FOR MAIN DEVELOPMENTAL ROADS.

The Government of the Commonwealth having, for the second time, decided to assist the States in the construction of main developmental roads, allotted a sum of £90,000 as this State's proportion of a grant of £500,000 under conditions similar to those attached to the previous Federal grant of £70,000, namely, that the State Government should contribute a similar amount.

PLATE NO. 6.

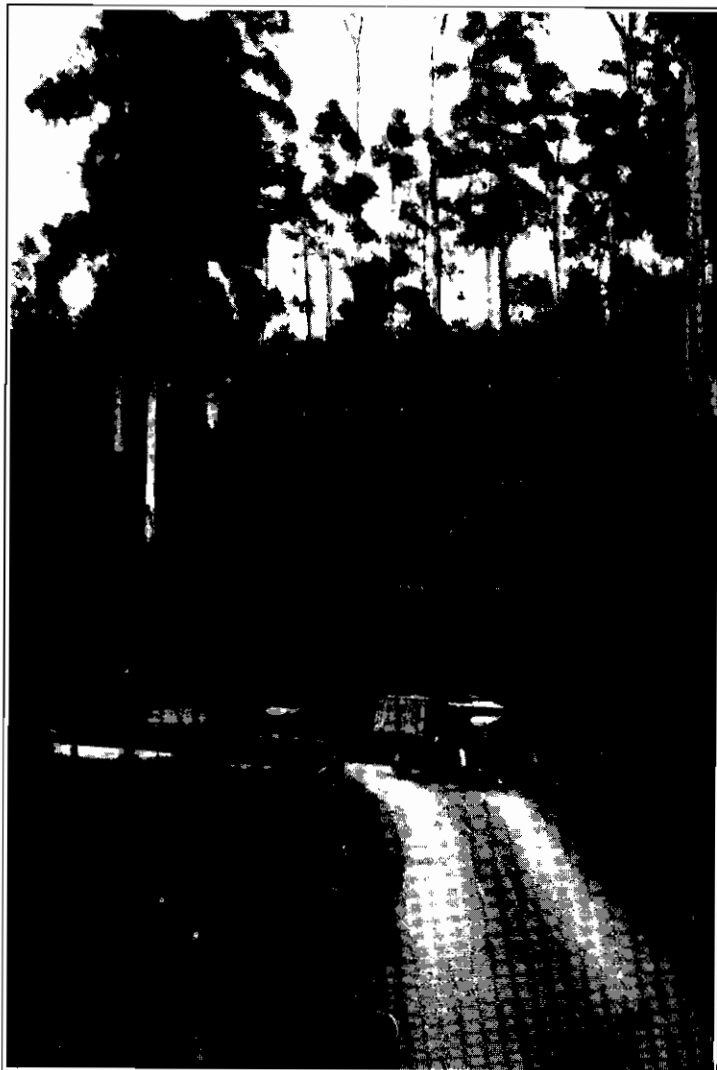

PLATE NO. 7.

Cape Otway District, Forrest-Apollo Bay Road.

Having been entrusted with the supervision of the expenditure on behalf of the State the Board, after consultation with the Chairman of the State Rivers and Water Supply Commission and the Director of Lands Settlement, submitted a list of works for the approval of the Federal

authorities. It was agreed that, having regard to the fact that for some years this State, unlike some States, had in progress an extensive programme of main and developmental road construction over its whole area, particular and special consideration should be given to soldier settlements, the new irrigation districts, and the more remote parts of the State, where development was retarded through lack of road facilities, and where the municipal bodies were financially unable to incur any large expenditure under the State road construction schemes, towards which they would be required to contribute.

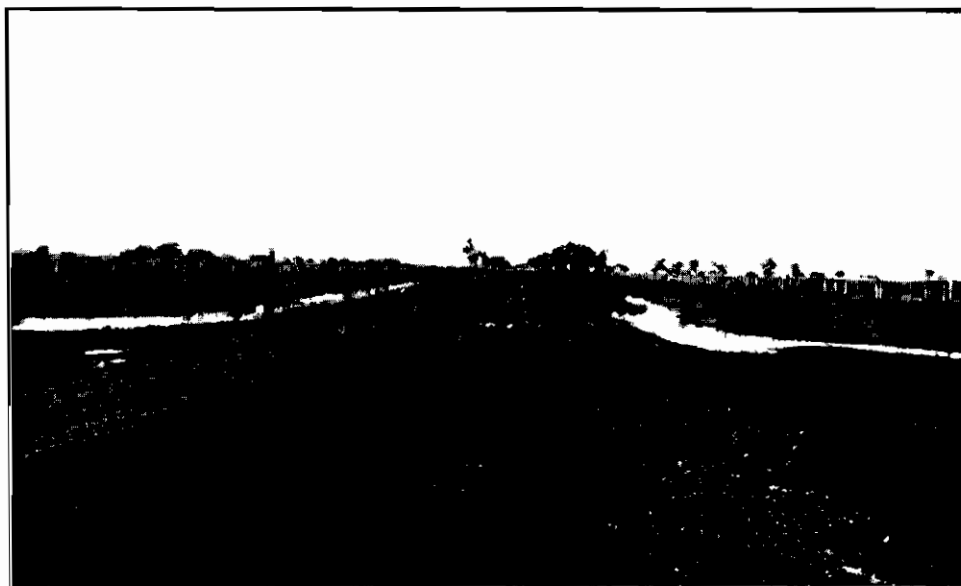

PLATE NO. 8.

Murray Valley Road, Cohuna Shire. Showing wide formation and finished road in comparison with old narrow and unmetalled formation.

It is gratifying to note that this policy received the ready endorsement of the Federal authorities, as being within the intent and purposes of the Federal legislation, with the result that with one exception, the whole of the road works authorized under this State's proportion of the grant are in remote and undeveloped areas, the exception being the road leading to the Aviation Dépôt at Point Cook, in which the Federal Government is vitally interested, and with which the Board readily agreed. Upon this road a sum of £12,454 13s. 5d. of Federal and State funds has been expended during the year, of which the Federal Government contributed a sum of £9,473 16s. 11d. and the State Government £2,980 16s. 6d.

The total expenditure for the year under both the No. 1 and No. 2 Federal-State grants amounted to £126,650 11s. 7d. (see Appendix "A").

PLATE NO. 9.

Showing Morwell Valley Road in Gippsland Hill Country, Morwell Shire.

This Board, as the constructing and supervising authority for this State, desires to record its appreciation of the great value this Federal assistance has been in the provision of road facilities in portions of the State which for many years would have remained unproductive and undeveloped, and also to record its appreciation of the courtesy and sympathy with which the Federal Director of Works has received and considered the various proposals submitted to him by the Board on behalf of this State.

The following photographs further illustrate the classes of work being carried out and the nature of the country to be served by the Federal-State grant expenditure.

PLATE No 12.

Showing side-cutting and completed metalled road. Fumina Road, Buln Buln Shire.

#### IMPROVEMENT AND MAKING ACCESSIBLE PLACES OF INTEREST, TOURIST RESORTS, ETC.

Under Act No. 3235 funds were provided for the above purpose, and the Tourist Committee—the members of which act in an honorary capacity—was appointed under the provisions of the Act. Owing to the fact that the Committee did not have at its disposal any professional or administrative staff, this Board was appointed by the Government to be the road-constructing authority.

Up to the present only three works of any magnitude have been undertaken, namely, Hall's Gap-Wartook Road, between Stawell and Horsham, in the Grampians; Warburton-Narbethong Road, and a section of the Great Ocean Road, between Lorne and the Wye River.

For the first and last mentioned it was impossible to secure satisfactory tenders; consequently, in each instance, the work was undertaken by day labour, the expenditure on each road for the year being respectively £9,616 4s. 4d. and £2,308 18s. 7d.

On the Warburton-Narbethong Road contracts to the value of £8,589 have been entered into, and are in progress.

The total expenditure on all works of this character during the year amounted to £13,276 10s. 9d. (see Appendix "A").

#### APPORTIONMENT OF COSTS.

The usual apportionment of expenditure on permanent works and maintenance on main roads to the 30th June, 1923, was made during the year, under the provisions of section 27 of the *Country Roads Act 1915*, £2,339 9s. 3d. being charged to municipalities on account of interest on the cost of permanent works, and £134,905 14s. 2d. in respect of expenditure on maintenance.

#### APPENDICES.

Details of work carried out on main and developmental roads, together with Statement of Accounts for the year, are set out in the Appendices, in accordance with the requirements of the *Country Roads Act*.

I have the honour to be,

Sir,

Your obedient servant,

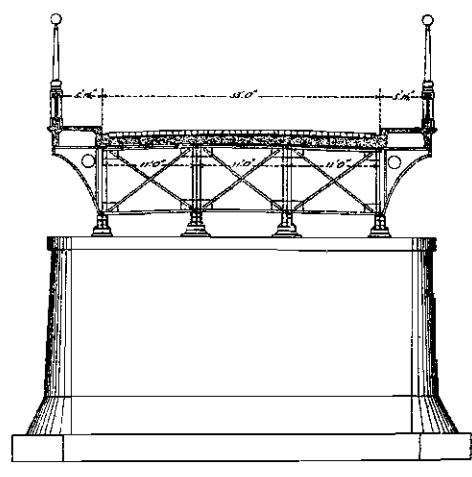

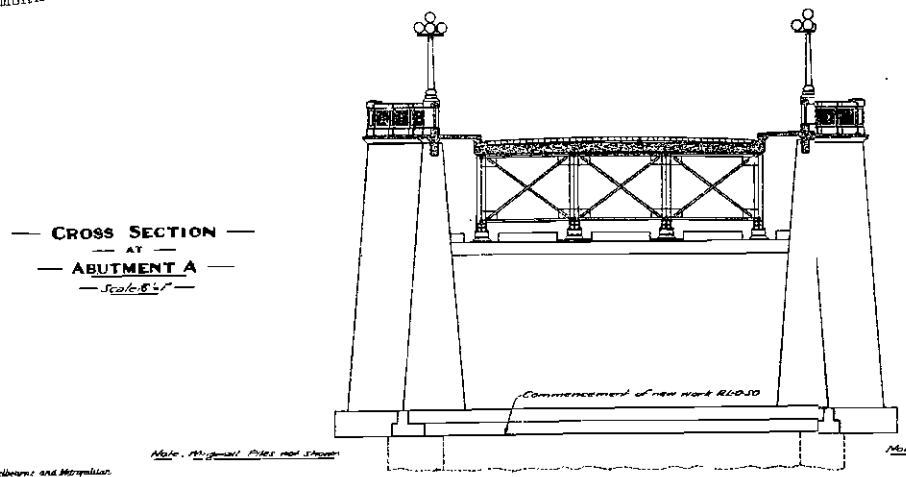

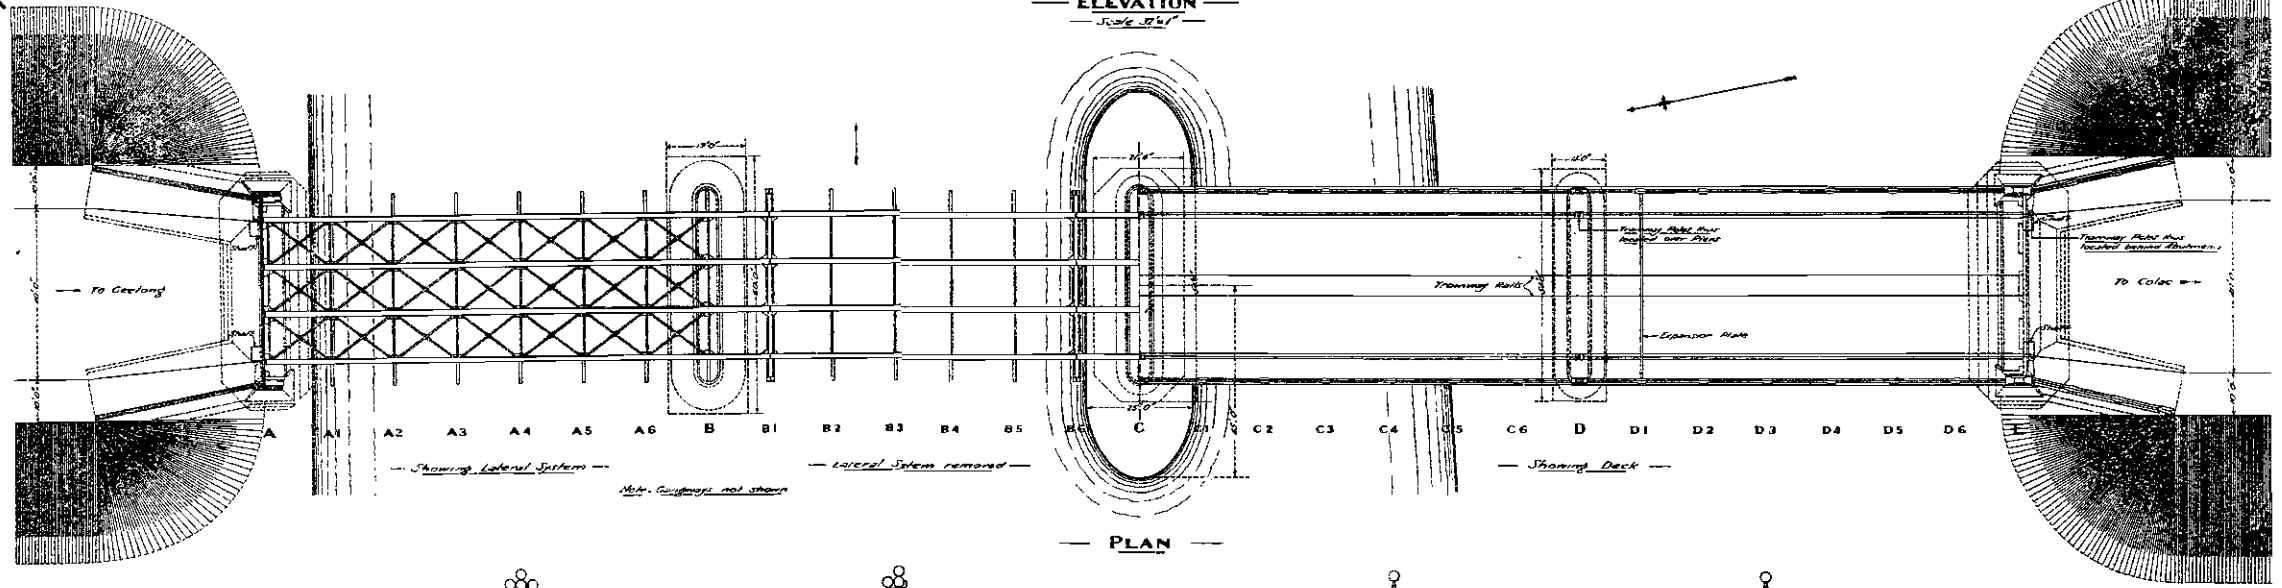

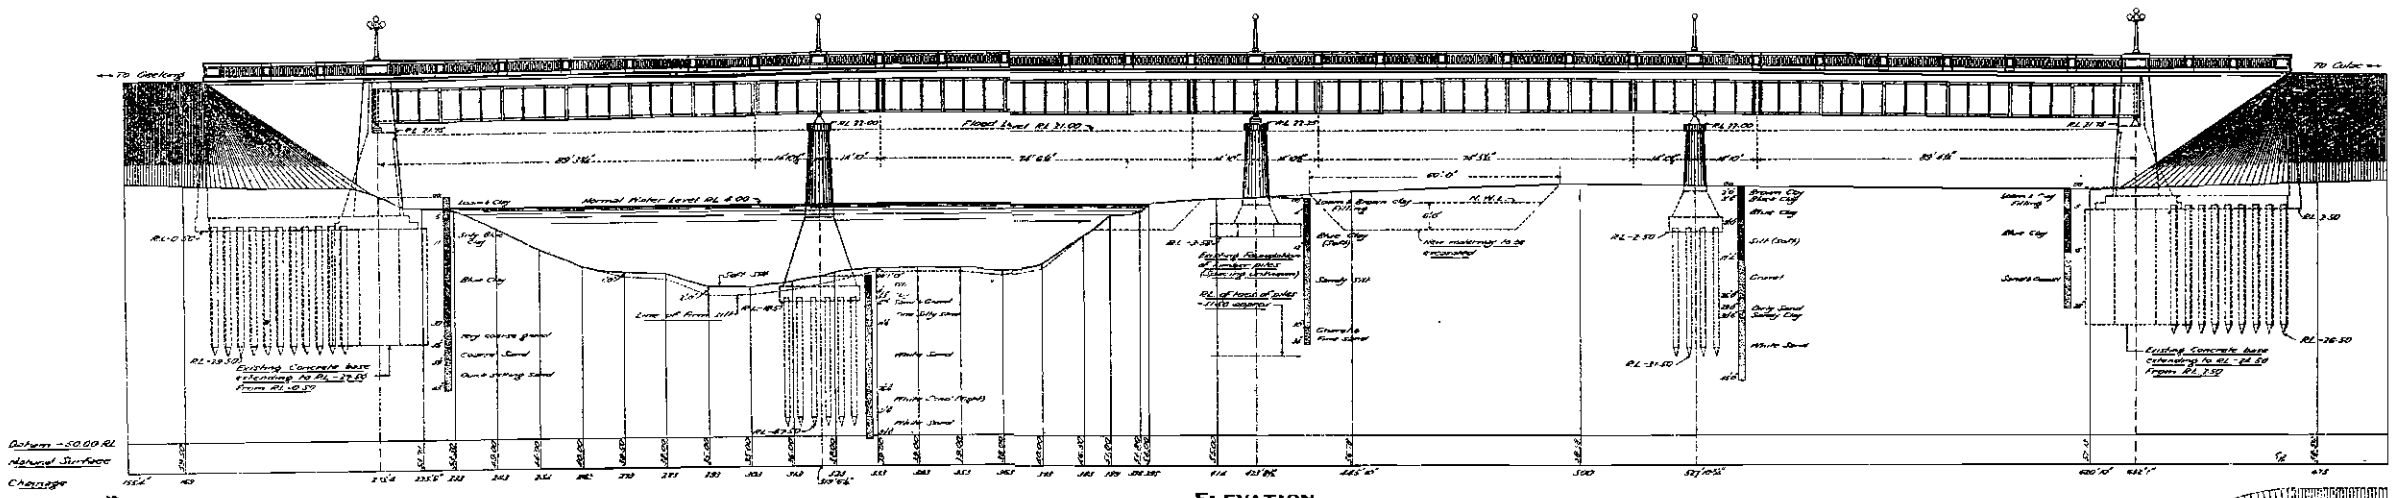

W. CALDER, Chairman.

W. McCORMACK, Member.

F. W. FRICKE, Member.

W. L. DALE, Secretary.
