ANNUAL REPORT

OF

THE STATE RIVERS AND WATER SUPPLY COMMISSION

FOR

YEAR ENDED 30TH JUNE, 1946.

PART 1.—SUMMARY OF REPORT.

	I ago
The State Rivers and Water Supply Commission was constituted on 1st May, 1906, under the provisions of Water Act 1905. This Report covers the period 1st July, 1945, to 30th June, 1946.	
RATING.	
The total net annual valuation of properties within irrigation and waterworks districts and urban districts and divisions thereof, including the Coliban System, amounted to £3,756,279, indicating a total capital value of over £75,000,000	43
The total number of rating assessments in the districts supplied with water by the Commission is 88,202	43
IRRIGATION DEVELOPMENT.	
	6 and pendix E
The soil survey of the Nambrok-Denison irrigation area was completed and an area of 22,000 acres reported as suitable for Soldier Settlement	16
A survey of the land between Numurkah and Nathalia was carried out	16
An area of 60,000 acres in the Murray Valley District has been approved as suitable for "Soldier	
Settlement "	16
WATER SUPPLY.	
The total capacity of water storages controlled by the Commission is 1,969,970 acre feet including Victoria's half share of River Murray storages	pendix F
The total area of lands in Victoria supplied with water for domestic and stock purposes or for irrigation by channels, tanks, bores, and pipe lines was 15,398,700 acres	19
The Commission's storages contained 440,505 acre feet at 1st July, 1945, but at the end of the irrigation season owing to good rains they contained 1,254,170 acre feet	19
Total water deliveries for the year from the Commission's irrigation systems were 557,625 acre feet Ap	pendix A
Authorized diversions from streams issued under long-term licences and annual permits totalled 2,587 compared with 2,012 for 1944-45	40

TOWN SUPPLIES.	Page
Concrete lining of channels in the Coliban System which practically ceased during the war has been resumed	34
A supply from the Wurdee Boluc Reservoir has been provided for the Township of Winchelsea	34
The Commission is preparing a scheme for the afforestation of 3,000 acres of the Lysterfield catchment area recently acquired by it	35
Proposals were approved for an urban supply to the Townships of Birregurra, Noorat, and Glenormiston	35
DOMESTIC AND STOCK SUPPLIES.	
Owing to the low level of the storages serving the Wimmera-Mallee system at the commencement	
of the season the Commission had to pump water from Pine Lake and the Murray River at Nyah to supplement these storages. Subsequent good rains improved the position and ensured adequate supplies for the remainder of the season	24
Sand drift was again a major problem in the Wimmera-Mallee system and the cost of clearing channels for the 1945-46 season rose to £322,827	27
Work on the Wychitella channel system is progressing and it is anticipated that the main channel 68 miles long will be completed in readiness for the 1946-47 watering	24
PUMPING.	
The work of replacing the old boilers at Red Cliffs Power Station is progressing. Tenders have been called for the supply of two modern water tube boilers	27
Great difficulty was experienced in obtaining sufficient coal and triquettes for the Red Cliffs Power Station and the Commission is awaiting with interest the result of the investigations of the	27
State Electricity Commission to establish a central power station at Mildura	21
NEW PROPOSALS—INVESTIGATIONS AND DEVELOPMENT.	
The general investigations into the resources of the State were continued with particular attention to the waters of the Broken, Campaspe, Goulburn, Loddon, Murray, and Werribee Rivers	28
In the Murray Valley Irrigation District, designs and plans were prepared for some 150 miles of channels involving the excavation of 640,000 cubic yards of earthworks and construction of 700 channel structures	30
Investigation and design of the channel system to supply water to the Nambrok-Denison area has continued	30
Planning of many new projects and the carrying out of current investigations has been seriously hampered by lack of staff, many of whom have resigned	14
FINANCE.	
The total receipts for water rates and charges for the financial year 1945-46 amounted to £663,691, the highest collection being £763,020 in 1942-43. Other receipts amounted to £109,732	60
The net Loan Liability of the State for works of water supply and drainage at 30th June, 1946, was £28,911,274, exclusive of equity in National Debt Sinking Fund	105
Of the net Loan Liability at 30th June, 1946, £1,351,531 is charged to Waterworks Trusts and other Local Governing Bodies, £1,141,609 is debited to districts directly controlled by the Commission, £72,598 is debited to the Plant and Machinery Account, and the balance £26,345,536 is borne by the State	59
The total Interest Charges for 1945-46 amounted to £1,201,646	59
Waterworks Trusts and Local Governing Bodies paid to the Treasury as interest on loans the sum of £50,751	52
In addition, interest amounting to £41,864 in respect of Districts and Divisions under its control was met by the Commission	52
In 71 districts, the capital liability of which has been adjusted, the operations for the year resulted in a net surplus of £17,584 after providing for interest, redemption, and depreciation	59

FINANCE—continued.	Page
A loss of £381,871 was incurred in operating districts to which the supply was continued by direction of the Governor in Council. This amount was debited to the "Revenue Expenditure Chargeable to the State Account"	59
The net cost of services of a national character and other miscellaneous charges not debited to districts was £48,045	60
The net cost to the State for Interest and Exchange, loss on districts supplied by direction of Governor in Council, and services not directly chargeable to water-users was £1,511,616	59
The total expenditure during the year on water distribution, maintenance of water supply and drainage works, administration, war damage insurance, and subsidies to Sewerage Authorities, &c., was £1,113,920	58
The value of stores and equipment held in the Stores Suspense Account as at 30th June, 1946, was £198,978	53
The value of movable Plant and Machinery held in the Plant and Machinery Account as at 30th June, 1946, was £72,598	52
A statement is included showing the details of the Water Supply Works Depreciation Account, and the amounts at credit of the Water Supply Works Depreciation Fund, and Water Supply Plant and Machinery Depreciation Fund respectively	92-95
A sum of £48,420 was paid into Consolidated Revenue in respect of depreciation payments by Commission's Districts for the year 1945-46 9	2-95
The amount at credit of Water Supply Plant and Machinery Depreciation Fund as at 30th June, 1946 was £61,280	94
The arrears of water rates and charges outstanding at 30th June, 1946, was £451,033	91
The amount included in the Budget Estimate for 1946-47 for Vote Expenditure on works and services under the control of the Commission is £975,000. This amount is less by £204,183 than the Commission's estimated requirements	106

PART II.—GENERAL.

OUTLINE OF REPORT.

This Report covers the period 1st July, 1945, to 30th June, 1946, and includes information regarding the principal undertakings of the Commission and its administration throughout the year.

Statements are inserted giving particulars of the districts supplied with water by the Commission; the annual value of the lands and tenements supplied and the numbers of persons dwelling in these districts; the water rates, the irrigation charges, and drainage and flood protection rates and charges levied; the areas of lands under irrigated culture within the State; the quantities of water delivered to districts during the year; and the capacities of the various water storages. Financial particulars relating to the Commission's Works and Districts to the 30th June, 1946, and Estimates of Revenue and Expenditure for the year 1946–47 are also included.

Reference is made to legislation passed by Parliament in 1945–46 affecting the Commission's operations, to enquiries made by the Parliamentary Public Works Committee into matters concerning water supply and to the North-West Mallee Facts Finding Committee. This Report also contains reference to the progress of investigations of the water resources of Victoria and to works in progress. Information is given in regard to investigations into the enlargement of the Eildon Reservoir on the Goulburn River and to other projects.

Reference is also made to the position with regard to the removal of drift sand from the domestic and stock water supply channels in the Wimmera-Mallee System.

LEGISLATION.

The following Acts affecting the administration of the Commission were passed by Parliament in the 1945–46 session:—

Water Act 1945 No. 5072.—This Act came into operation on the 28th August, 1945. The following are the more important of its provisions—

(a) Reduction of the capital indebtedness at 30th June, 1943, of certain waterworks trusts and local governing bodies in accordance with the recommendations of the Town Urban Supply Committee.

(b) The making of temporary advances to waterworks trusts and local governing bodies to meet the cost of preliminary investigations and preparation of plans and specifications in respect of proposed works approved by the Commission. Such advances are limited to four per cent. of the estimated cost of the works and are free of interest.

(c) The relief of consumers of water in urban districts and divisions of the responsibility of providing or hiring meters, or of payment in respect of meters provided by water supply authorities.

(d) For making and levying water rates the net annual value or the unimproved capital value, as the case may be, adopted by the local municipality for municipal rates may be adopted by authorities in respect of lands within urban districts or divisions and by waterworks trusts in respect of rural lands, except where the Trust makes a valuation of such lands.

(e) The extension where necessary for a period or periods not exceeding five years of the period of five years for which valuations are made by the Commission or other authority in respect of rural lands for water rates.

Water (Levee Banks) Act 1946 No. 5117.—This Act which came into operation on 14th May, 1946, imposes a duty on the Commission to regulate the construction and use of private levee banks within any area which the Governor in Council may proclaim to be an area for the purposes of the Act; authorizes the Commission to grant a licence to any owner of land to construct and maintain a levee bank on his land or on adjoining Crown land or to enlarge or to repair an existing levee bank on such lands and prescribes penalties for offences against the Act.

ENQUIRIES AND REPORTS.

NORTH-WEST MALLEE FACTS FINDING COMMITTEE.

During the year the Government appointed a body known as the North-West Mallee Facts Finding Committee—

(1) To recommend the form of occupation most suited for the North-West Mallee areas of Victoria and to indicate the appropriate size of holdings.

- (2) To recommend the tenure on which land should be made available.
- (3) If temporary leasing of land is considered necessary in any instances, to make recommendations as to the terms of such leases.
- (4) Any other relevant recommendations.

The Committee which consists of—

- C. H. Johns, Chairman.
- R. F. McNab, Deputy Chairman and Member.
 R. E. Stafford, Member.
 A. J. Brown, Member.

- D. H. Larkin, Member.
- Alan J. Holt, Secretary.

is conducting a comprehensive investigation into conditions of settlements in North-western Mallee areas of Victoria, and it is expected that its report will be available in July, 1946.

RIVER IMPROVEMENT AND MAINTENANCE.

In September, 1945, the Parliamentary Public Works Committee submitted a report on legislation required for the more efficient maintenance of river improvement and drainage works, other than in irrigation districts. Recommendations by the Committee included the following-

- (1) That, under the Minister of Water Supply, a Council be established to advise on all matters relating to land utilization in any catchment, to consist
 - (a) Chairman, State Rivers and Water Supply Commission.
 - (b) Secretary, Department of Lands and Survey.(c) Chairman, Forests Commission,

 - (d) Director, Department of Agriculture.
 - (e) Secretary, Mines Department.
 - (f) Chairman, Soil Conservation Board.
- (2) That provision be made for river improvement and/or drainage works, to be controlled by the State Rivers and Water Supply Commission.
- (3) (a) That the Rivers and Streams Fund be placed under the direct control of the Minister of Water Supply, or the State Rivers and Water Supply Commission, and be renamed the River Improvement Fund.
 - (b) That provision be made for this Fund to be considerably augmented by some other regular source of revenue; and
 - (c) That this Fund be applied, as at present, in the form of grants to assist towards the cost of river improvement works generally throughout the State.

The Commission is continually receiving requests from all parts of the State for assistance to carry out river improvement work and feels that if this improvement work is to be dealt with in the comprehensive manner which its importance requires, the revelant recommendations of the Parliamentary Public Works Committee should be implemented by legislation.

CATCHMENT CONTROL.

In June, 1946, His Honour Judge Stretton was appointed as a Royal Commission to enquire into the effect of grazing in Forest Areas with particular reference to water catchment efficiency and soil erosion. This report is expected later this year.

RIVER MURRAY WATERS.

HUME RESERVOIR—INCREASE IN CAPACITY.

During the year the Commonwealth and States of New South Wales, Victoria and South Australia continued negotiations with regard to increasing the capacity of the Hume Reservoir from 1,250,000 acre feet to 2,000,000 acre feet, and in August, 1945, during the Premier's conference the Commonwealth and the three States concerned made the following decisions :-

> (1) It was agreed that the responsible Ministers in Victoria and New South Wales in consultation would confer in respect to measures designed to afford additional protection to the Murray River catchment areas.

(2) It was also agreed that the Ministers of the States concerned and the Commonwealth Government would confer for the purpose of reviewing the proposals for the use of the waters of the River Murray, to examine reports of development and surveys in the Murray Valley and consider other appropriate matters.

The Commonwealth Government on the 15th February, 1946, advised the Victorian Government that it had further considered a proposal that it should contribute a quarter share toward the cost of the enlargement of the Hume Reservoir, and stated that it was prepared to contribute 25 per cent. of the cost of increasing the storage capacity of the Hume Dam and widening the channel into Lake Victoria at a total estimated cost of £1,150,000 on the understanding that before any contribution was made by the Commonwealth Government, arrangements be made for the policing and control of the catchment area by a responsible authority—preferably by the extension of the powers of the River Murray Commission.

On the 28th March, 1946, the Victorian Government advised the Commonwealth Government that it had agreed to the proposal for enlarging the Hume Dam on the basis suggested and also to contribute 25 per cent. of the cost of the work.

The matter is urgent, as the enlargement of the Reservoir is absolutely essential in order to safeguard the Irrigation Districts already established along the Murray against disastrous water shortages, such as will inevitably be experienced if the additional storage is not provided before the next severe drought.

CONTROL OF FINANCE.

The Commission's finances are controlled by the State budgetary system under which all monies collected from water rates and charges, diversion permits and licences and other sources are paid into the consolidated revenue of the State, whilst the provision of funds for the maintenance, operation and management of all works under the control of the Commission is dependent upon annual appropriations by Parliament which is not advised of the requirements of the Commission's work, but has presented to it estimates which have been amended by the Treasury and included with those for all Government departments in the Annual Budget.

The Water Acts require that water rates and charges raised shall be sufficient to meet the cost of maintenance, operation and management of the respective districts. Water-users, therefore, have a rightful claim that all such monies shall be applied for the purpose for which they have legally been raised—namely—the adequate maintenance of the works for the supply of water to their lands.

This question received a good deal of attention from the Royal Commission of 1936, which included in its recommendations that:—

"The State Rivers and Water Supply Commission should be given control of its revenue from irrigation and water supply districts, waterworks districts, and flood protection districts, to meet the necessary expenditure on the maintenance, water distribution and management thereof, and to provide for adequate depreciation of wasting assets."

It is everywhere recognized that a Government should have complete control of departmental expenditure, but in Victoria, more than in any other country in the world, the State has gradually accepted responsibility for the management of public utilities of a business nature usually operated elsewhere by private enterprise.

All writers agree that the financial operations of these business undertakings do not properly form any part of government finance, and should not be embraced in the State Budget, which should be confined to normal social and national services, the extent of which must necessarily be determined by the funds available from general revenue.

This vital principle, however, has not been observed in connexion with the granting of powers to the State Rivers and Water Supply Commission, possibly because the difficulties were not foreseen, or possibly on the plea that the work of the Commission was largely developmental and could not be completely and directly reproductive while in the developmental stage.

The result has been that all of the Commission's revenues have been paid into consolidated revenue, and the Commission has been granted annually from consolidated revenue such amounts as the Treasury thought fit to include in estimates presented to Parliament for the maintenance and operation of the Commission's works.

Although theoretically, it might be said that shortages in times of stringency might be made up by additional votes when State revenues improved, in practice this has not been possible, and at no time during the forty years of its operations has the Commission been granted sufficient funds for both the supply of water and the maintenance of its works, many of which fell into disrepair and reached a deplorable condition. This condition was clearly seen by the Royal Commission, which, in paragraphs 261 to 284 of its Fourth and Final Report dealt with this question at some length.

The position would be bad enough if the Commission administered only one business undertaking—and the present method of presentation of the estimates to Parliament makes it appear that there is only a single undertaking—but when it is pointed out that the Commission is responsible for the operations of 163 separate districts, each of which by legislation must be administered as a separate financial entity, it will be realized that the arbitrary reduction of its aggregate estimates, regardless of the revenue position of the individual districts, not only makes budgetary control impossible, but also results in many instances in water users being deprived of services for which they have actually paid.

The argument that the State is meeting a large portion of the cost of water supply as a whole, and, therefore, should control the finances of the water supply undertakings, is not sound, as the extent of wear and tear on machinery, corrosion of pipelines, siltation of channels or deterioration of timber structures is in no way related to the condition of the State's finances, and cannot be regulated to accord with the funds that the Treasury might be in a position to make available from time to time for repairs and maintenance.

It is apparent that the Treasury cannot be expected to investigate the requirements of individual widely separated rural works, and that a continuation of the present system of control seriously jeopardizes country water supply by preventing the maintenance of these works.

Waterworks Trusts operating under the supervision of the Commission have, under the Water Act, complete control of their revenues, and the recommendation of the Royal Commission that similar control should be given to this Commission is strongly endorsed.

There are, however, a number of national services rendered by the Commission for which no direct revenue is received: such services include River Gaugings, supervision of Waterworks Trusts and Sewerage Authorities, advisory work in connexion with Rivers and Streams and Farm Water Supplies, the investigation of Water Resources and contribution towards the maintenance of River Murray Works.

The Water Acts also provide that, where the revenue from a district will not be sufficient to cover the expense of maintenance and management, the supply of water shall be continued to such district when so directed by the Governor in Council, in which case the annual loss incurred shall be borne by the State.

The maintenance of National Works and Free Headworks is also wholly borne by the State.

It is, therefore, evident that even if the Commission were given complete control of the revenue received from water rates and charges and other sources, it would be necessary for it to receive additional amounts each year to meet the cost of national services and of maintaining "non-paying" districts. Such additional amounts could be provided only by annual appropriations approved by Parliament, in connexion with the State Budget.

The Commission is very strongly of the opinion that the estimates presented to Parliament should be in a form which would indicate that the amounts provided for the maintenance of the various districts will be not less than the revenue to be raised in these districts. Where such revenue will be insufficient to meet the proposed expenditure, as in the case of Mallee waterworks districts, Parliament should be advised accordingly and asked to authorize the additional amounts required by way of subsidy.

By far the greater number of the districts controlled by the Commission provide sufficient revenue from rates and charges to meet the whole cost of maintenance and operation. This is not generally recognized, for the position is masked by the relatively

heavy losses on a few districts, and the Commission is of the opinion that the extent to which these few districts and works are subsidized by the State should be disclosed in the Estimates contained in the budget. This, however, cannot be ascertained under present arrangements.

Probably the most satisfactory method of solving the difficulty, and informing Parliament fully in regard to water supply operations, would be by creating a "Water Supply Works Operating Fund" into which would be paid as follows:—

- (a) By the Commission.—All revenue received by the Commission from water rates and charges, diversion licences, &c.
- (b) By annual appropriation—
 - (i) the cost of providing national services for which no charge is made.
 - (ii) the cost of maintaining and operating free headworks and national works.
 - (iii) the equivalent of the annual financial loss on "non-paying" districts.

An analysis of revenue and expenditure indicating actual surpluses and deficiencies for 1945-46 is given on page 107.

ADMINISTRATION.

ACCOMMODATION.

The State Rivers and Water Supply Commission is a country rather than a metropolitan organization, as its activities are decentralized to a greater extent probably than any other Department.

The Commission has 35 administrative centres of which only two are in the metropolitan area and 33 in country towns. As may be expected, by far the greater number of Commission employees work and live in the country—only 300 or fewer than 14 per cent. or one-seventh residing in the metropolitan area.

For many years, however, the Commission has been most seriously handicapped because of inadequate and unsuitable accommodation for its Design and Administrative Staffs. This difficulty has now been overcome. On the 22nd October, 1945, the Commission commenced the transfer of its Head Office administrative staff from Treasury Buildings to Centenary Hall, a five story building situated at 100–110 Exhibition-street, and the Fine Arts building adjoining Centenary Hall. Later in the year the Engineers, Draughtsmen and other officers of the Head Office sections of the Murray and Major Works Division, the Investigations and Designs Branch and Mechanical and Surveys Branch were accommodated in a six story building at 31 Flinders-lane, which is being adapted to meet the Commission's requirements.

STAFF.

There are at present 976 officers on the staff of the Commission, 520 of whom are permanent and 456 temporary, as against 570 officers in 1926, of whom 501 were permanent and 69 temporary and 400 in 1936 of whom 367 were permanent and 33 temporary. The number of professional and clerical officers who served during the recent war with the Army, Navy and Air Force was 206, and in addition 43 officers were loaned to the Commonwealth and other Departments, and to the Army of the United States of America for War work. To date all except 39 have returned to the service of the Commission.

During the year 35 officers resigned to take up positions elsewhere, of whom 17 were engineers and draughtsmen. Included in the resignations were two senior executive officers, Messrs W. W. D. Minson, B.E. Executive Engineer, and Mr. J. C. R. Sundercombe, B.E., Senior Electrical Engineer.

In order to meet the public demand supported by government policy for increased water conservation and distribution throughout Victoria, the Commission has been endeavouring to build up a staff of competent trained professional and clerical officers so that it might be in a position to carry out its very great responsibilities to the State in the most efficient manner possible. The continued loss, however, of trained personnel who have found more attractive opportunities elsewhere has very seriously retarded the development of the Commission's water conservation programme, and unless the remaining staff is retained and strengthened with additional qualified and experienced professional and clerical officers to meet the rapidly expanding needs of the Commission, it will not be possible to make reasonable progress with the State water conservation programme. Reference is made to this matter under the heading of Planning of New Projects.

As well as carrying out investigations of approved works, the Commission must, of course, continue the administration of its 77 irrigation, waterworks, flood protection and drainage districts which cover an area of nearly one-quarter of the State of Victoria and of its 86 urban districts and divisions. The only basis on which the State's water resources can return to the State their maximum potential value is by long range planning and development, and the continual interruption of investigations by resignations of highly trained officers has proved very costly to the State.

DEATHS AND RETIREMENTS.

The Commission records with deep regret the death during the year of the following officers:—

Pilot Officer G. Ritchie, who was first reported missing whilst on active service in 1942; and of Water Bailiffs C. Bennett, Merbein; H. J. J. Downing, Stanhope; and Ranger C. N. Fisher, Nyah Centre.

Former Officers.—Mr. O. C. Brown, formerly Chief Clerk; Mr. E. Checchi, formerly Engineer-in-Charge of River Gauging; and Mr. M. H. O'Grady, formerly Revenue Officer at Bendigo.

The Commission wishes to take this opportunity of expressing its appreciation of the loyal and valuable service rendered by the following officers who retired during the year on attaining the statutory retiring age:—

Messrs R. F. McNab, Divisional Engineer, Wimmera-Mallee Division; C. W. Stone, Mechanical Engineer; W. J. Jacobs, Mechanical Assistant; F. J. Cooke, Supervisor of Water Distribution; D. Gibson, Surveyor; N. Lisle, Clerk; Senior Inspector, R. H. Goold; Inspector, W. E. Ault; Senior Water Bailiff, D. D. Fahey; Mr. J. H. Launder, Caretaker, Pine Lake; Overseers, E. M. Brymer and E. H. Page; Rangers, M. Houlihan, A. Murphy, J. Millar, and M. F. Healey; Water Bailiffs, R. Cole, B. G. Woolley, J. M. Jolley, J. J. May, and J. L. Waters; and Water Bailiff, G. A. Hawkins of Red Cliffs, who retired on account of ill-health.

Among the 49 officers who were promoted during the year were:—-

Messrs. W. Lambert, B.Com., D.P.A., A.F.I.A., to Chief Finance Officer; J. M. Mathew, B.M.E., to Superintendent Testing and Research (Class "A"); F. M. Shaw, B.C.E., E.W.S., C. L. Sanders, L.S., E.W.S., M.S.E., V. G. Swanson, B.C.E., E.W.S., M.S.E., to Executive Engineers (Class "A"); R. H. Richmond, B.C.E., E.W.S., to Divisional Engineer (Class "A"), Waterworks Trust and Sewerage Authorities Division; T. A. Lang, M.C.E., E.W.S., to Assistant Chief Designing Engineer, (Class "B-A"); N. M. Worner, B.C.E., E.W.S., to Engineer (Class "B"), Rocklands Reservoir; R. C. Simmons, B.C.E., E.W.S., M.S.E., to District Engineer (Class "B"), Camperdown; R. G. Mason, L.S., to Assistant Chief Surveyor (Class "B"); and J. D. Lang, B.C.E., E.W.S., to Designing Engineer (Class "B").

For the purposes of comparison a statement showing the number of officers on the Commission's staff in the years 1926, 1936, and 1946, is set out.

		1926.				1936.		1946.		
		Permanent.	Temporary.	Total.	Permanent.	Temporary.	Total.	Permanent.	Temporary.	Total.
Professional Officers		148	10	158	120	3	123	169	106	275
Clerical Officers		113	8	121	72	9	81	124	81	205
General		240	51	291	175	21	196	227	269	496
${f Totals}$		501	69	570	367	33	400	520	456	976
Percentage employed Temporary Basis	on 	12	per cent		8	per cent.		48	per cent.	

At the end of this report appears a list of officers of the Commission who served in the Armed Forces during the recent war.

Housing.

Thirty-three districts offices are situated in the various country districts of the Commission, while the staff residences owned by the Commission now number 265. A further 20 residences have been approved for construction and work on 12 is now proceeding.

The progress on the Commission's housing programme is handicapped by the lack of suitable materials and to expedite construction the Commission has purchased disused military camps in order to obtain building material.

The Commission during the year took the opportunity of purchasing 123 army hutments and utility buildings from the Commonwealth Disposals Commission for dismantling and consignment to major construction works and district centres, in order to provide accommodation for workmen's offices, stores, workshops, and shelters.

TRANSPORT.

The total mileage travelled by motor vehicles engaged in the service of the Commission for the year under review, was 1,378,990 miles. Of this, 1,056,000 miles were covered by 133 vehicles owned by the Commission, comprising 8 cars, 88 utility trucks and 37 other trucks of various types. In addition 7 cars operated by Commission's District officers with commuted allowances travelled 34,560 miles, and cars used by officers on Commission business on a "rate per mile" basis, numbering 100, travelled 288,430 miles.

Forty vehicles were purchased from the Commonwealth Disposals Commission during the year, but many of the Commission's vehicles are now in poor condition and long overdue for replacement when new vehicles can be obtained.

PLANNING OF NEW PROJECTS.

The position in regard to the investigation and planning of new projects is causing the Commission considerable concern.

During the war years and since the cessation of hostilities, the Commission has been asked to investigate and report upon a very large number of new proposals—mostly for water supply or irrigation—but at no time has the staff position, particularly in regard to engineers, surveyors and draughtsmen, been such as to allow any work at all to be done on more than a relatively small number of the most important and urgent projects.

With a resumption of construction during the year the position in regard to investigation and designs has become even more desperate because highly skilled designing engineers have been successful applicants for newly created positions on the construction of such works as the Rocklands and Cairn Curran Dams and the Central Gippsland irrigation project. Such losses of staff from one branch to another are unavoidable under the Public Service system, even although they cause most serious disruption to, and frequently total suspension of, investigations on important projects.

The work of the Investigations and Designs Branch comprises, firstly, preliminary investigations in order to determine the practicability and probable cost of projects and enable reports to be prepared for presentation to the Government and to the Parliamentary Public Works Committee with a view to obtaining approval for the construction of the works; and, secondly, the preparation of detailed final plans to enable actual construction to proceed. This latter work, i.e., the preparation of detailed plans, usually requires the services of many more engineers and draughtsmen and takes a great deal more time in man-hours than the preliminary investigations which determine the feasibility of the project. Preliminary inquiries in connexion with a major project may require only half a dozen plans, but for actual construction the detailed plans may run into scores or possibly hundreds of separate drawings with appropriate computations.

The Investigations and Designs Branch has lost 35 officers since the 1st July, 1945, by resignation or promotion to other work, and the position has been reached that reasonable progress can be made during the coming year on plans for not more than six major projects, namely:—

- (1) Rocklands Dam and Outlet Channel.—Now under construction.
- (2) Murray Valley Irrigation Works.—Under construction.
- (3) Cairn Curran Dam.—Materials are being assembled and construction will be begun as soon as sufficient engineers and clerical officers to supervise the work have been appointed.

- (4) Central Gippsland Irrigation Project.—On which construction is to start as soon as staff can be obtained to supervise the work.
- (5) Soldier Settlement Areas—Dried Fruit and Citrus.—Where every effort is being made to have a number of holdings ready for planting in spring of 1947.
- (6) Eppalock Dam.—For which preliminary plans suitable for presentation to the Parliamentary Public Works Committee are approaching completion.

A considerable amount of work in the way of preliminary planning has been done on a number of projects of which the following are the most important. It will not be possible to go further with detailed planning for construction with present staff:—

- (1) Eildon Enlargement.—A very large amount of detailed investigation has been completed and the reports are ready for consideration by the eminent consulting engineer Dr. J. L. Savage, who will visit Australia and inspect the site in September, 1946.
- (2) Goulburn-Waranga Channel Duplication.—Preliminary investigations have been completed and reports have been submitted to the Parliamentary Public Works Committee.
- (3) Torrumbarry System Main Channel Reconstruction.—Preliminary investigation has been completed and a report presented to the Government.
- (4) Cobbledick's Ford Dam, Werribee River.—Preliminary designs have been completed and report submitted to Parliamentary Public Works Committee.
- (5) Tullaroop Dams, on Tullaroop Creek.—Preliminary report will be ready for submission to Parliamentary Public Works Committee in September, 1946.
- (6) Huntly-Elmore Domestic and Stock Water Supply Project.—Preliminary report is approaching completion and should be ready for consideration of landholders concerned in November, 1946.
- (7) Piangil Irrigation Project.—Preliminary report is well advanced, but cannot be completed until certain soil and topographic surveys have been carried out.

Other projects upon which some work has been done, but on which progress is being retarded owing to lack of staff include:—

- (1) Broken River—Conservation.—First Progress Report completed, but work suspended owing to loss of officers engaged on this work.
- (2) Nyah Sub-Surface Drainage.—Construction work proceeding, but is being delayed owing to lack of plans.
- (3) Tallygaroopna Town Water Supply.—Construction work, which has been long delayed awaiting plans, will shortly be undertaken.
- (4) Boort—Reconstruction of Channels.—Investigation disrupted owing to loss of officer concerned, but is being resumed.

Important projects listed for investigation, but upon which no progress has been made, include:—

- (1) Moorarbool River.—Water conservation and irrigation.
- (2) Mitchell River.—Water conservation and irrigation.
- (3) Avon River.—Erosion control works.
- (4) Wimmera River.—Storage reservoirs.
- (5) Beakin Irrigation District.—Reconstruction of channels.
- (6) Hattah Lakes.—Water conservation.—Arrangements made for aerial survey but no progress with engineering investigations,

IRRIGATION DEVELOPMENT. 1945-46 Season.

The 1945-46 irrigation season commenced with depleted reservoirs, and the low winter rains did not hold out prospects of average spring flows in the rivers. Steps were therefore taken, following the Advisory Board conference referred to later, to allot quotas of water to the various irrigation districts, and to bring about the most effective use of available supplies.

However, good rains in October and November lessened irrigation demands and kept up stream flows. Further rains in January and the following months brought about a continuance of good river flows with the unusual result that more water was in storage at the end of the irrigation season than at the beginning.

As a result of the autumn rains the demand for water for the irrigation of native and annual pastures dropped off, and consequently the total water distributed and the area irrigated (as shown in Appendices "A" and "E") were lower than the two previous drought years.

PRODUCTION.

Production from the irrigation areas during the year 1945–46, was not as high as during the record year of 1943–44, the figures for which were quoted in the last Annual Report. Due to frosts in the spring and poor harvesting conditions both the yield and the quality of dried vine fruits were below the average of the previous five years.

In the deciduous fruit areas of the Goulburn Valley the Rutherglen bug infestation reduced the crop of apricots and peaches by about one-third and also reduced the quality of the fruit that could be canned. Pears were not affected and large crops were harvested both of canning pears and of winter dessert pears. The latter have within the last few years increased in importance as an irrigation product and extensions have been made in the cool stores at Shepparton and Mooroopna to store the additional production.

Following on the cessation of hostilities the demand for tomatoes for processing declined and a smaller area was planted than in the previous year. The shortage of water in the Werribee System also prevented the usual area of vegetables from being planted. As noted elsewhere in this report, nearly one hundred bores were sunk in the Werribee district to supplement the water supply. In the Mornington Peninsula considerable areas of vegetables were watered from the urban supply system.

Dairymen in the irrigation areas generally had better returns than in the previous year. In the northern irrigation districts, butter and cheese production increased by 10 per cent. compared with the previous year, and in addition fresh milk was forwarded from Rochester to Bendigo and areas further south. In the Central Gippsland Irrigation District, butter production increased by nearly 30 per cent.

COMPETITIONS.

The Hanslow Cup Competition for the "Best Effort to Control Soil Drift on a Mallee Farm" was again conducted during the year. The continued generosity of a number of authorities and firms again enabled cash prizes to be given for sectional competitions.

In conjunction with local Agricultural Societies competitions for "The Farm with the most Efficient Use and Control of Water" and best "Areas of Lucerne, of Irrigated Pasture and of Summer Fodder Crops" were conducted in the Tragowel Plains, Maffra—Sale, and Murray Valley Districts. Reports of these competitions have been published in the Journal of the Department of Agriculture.

Soil Surveys and Investigations.

The field work of the Soil Survey of the lands in the proposed Nambrok-Denison irrigation area was completed by officers of the Department of Agriculture during the year, and after consideration of an interim report a recommendation was made that an area of 22,000 acres would be suitable for "Soldier Settlement". Arrangements are also being made with the Department of Agriculture for the survey of certain other lands in Central Gippsland which can be supplied from the Macalister River.

A soil survey of certain areas contiguous to the Red Cliffs Irrigation District is also being carried out with a view to extensions of the dried fruits industry.

The land between Nurmurkah and Nathalia within the area proposed for soldier settlement was also surveyed during the year by the Council of Scientific and Industrial Research and the report is now available.

RESEARCH.

The Commission has continued to co-operate with various bodies carrying out research work in irrigation districts. During the year local research and investigation committees have been established at Corop and Cohuna. Water was again made available without charge for experimental and development plots at twenty schools in the irrigation districts.

DISTRICT ADVISORY BOARDS.

In order to give members of the northern irrigation districts Advisory Boards an opportunity of discussing problems of mutual interest to water users, including proposals of the Commission in respect to future water supply, a conference of members of the eighteen Advisory Boards in the Goulburn and Loddon Divisions in northern Victoria, was held at Bendigo on 1st and 2nd August, 1945. A full report of the conference, which was most successful, and the resolutions passed, was published and circulated to all concerned.

The Boards again functioned successfully in all irrigation districts, and in the drainage districts of Cardinia and Carrum, and were of great assistance to the Commission in dealing with local water supply and drainage problems. The co-operation of Advisory Boards is much appreciated by the Commission.

LAND CLASSIFICATION IN IRRIGATION DISTRICTS.

During the year applications under Section 10, Water Act 1939, No. 4513, for variation in the water rights in the Murray Valley District were dealt with by the District Appeal Board.

SETTLEMENT OF EX-SERVICEMEN IN IRRIGATION DISTRICTS.

With the appointment of the Soldier Settlement Commission to control settlement of ex-servicemen in Victoria, representatives of that Commission took the place of the representatives of the Lands Department on the Joint Departmental Committee appointed to report on proposals for soldier settlement in irrigation districts. During the year the Committee reported on several proposals.

This Commission is also co-operating with the Soldier Settlement Commission in the subdivision of land and planning of settlement in irrigation districts. The area of 60,000 acres in the Murray Valley Irrigation District mentioned in the last report has been approved by the Commonwealth Director of War Service Land Settlement as suitable for soldier settlement, and a further area of 22,000 acres in Central Gippsland, which will be an extension of the Maffra–Sale Irrigation District, has also been approved.

Investigations are also being made into the suitability of certain areas along the Murray River for the extension of the dried vine fruit and citrus industries.

DISTRICT EXTENSIONS AND EXCISIONS.

The Murray Valley Irrigation District was extended to include an additional area of 173,500 acres, which will be commanded by an extension of the channel system of that District. Of this area, 161,000 acres were formerly within the District of the Numurkah Waterworks Trust.

An area of 160 acres, supplied by an extension of the Commission's works, was added to the Maffra–Sale Irrigation District.

· Western Wimmera and Normanville Waterworks Districts were extended to include areas of 20 acres and 1,460 acres respectively supplied from the Commission's works.

Areas of 90 and 45 acres not supplied by the Commission's works were excised from Wimmera United and Long Lake Waterworks Districts respectively.

The Otway Waterworks District was extended to include an area of 870 acres served by an extension of the Commission's works in Port Campbell-road, Cobden.

An area of 35,300 acres was excised from the Normanville Waterworks District and included in the West Loddon Waterworks District, constituted under the provisions of the Water (Loddon) Act 1944.

10106/46.—2

Cobden, Nyah West, Rupanyup, and Terang Urban Districts were extended to include lands served by extensions of the respective reticulation systems.

Adjustments were made to the boundaries of the Jung Jung, Marnoo, and Rupanyup Urban Districts to exclude small areas of rural lands not supplied from the works of the respective urban systems.

Wonthaggi, North Wonthaggi, and Hicksborough Urban Districts were united, and are known now as the Wonthaggi Urban District. Carrum and Frankston Urban Districts were united to form one district known as Chelsea–Frankston Urban District.

The Red Cliffs Drainage District was extended to include an area of 15 acres benefited by the Commission's drainage works.

NEW DISTRICTS.

Pursuant to the provisions of the Water (Loddon) Act 1944, the Loddon United Waterworks Trust was abolished as from 1st July, 1945, and the Waterworks District of the Trust was divided into three districts known as Loddon, East Loddon, and West Loddon Waterworks Districts. This Act also constituted the Mitiamo Urban District of the Trust a Waterworks District and Urban District under the control of the Commission.

The Wychitella Waterworks District. comprising an area of 177,200 acres, was constituted. This area will be supplied from the Wimmera-Mallee gravitation channel system.

The townships of Birregurra, Pimpinio and Tallygaroopna have been proclaimed Urban Districts.

PROPOSED DISTRICTS.

It is proposed to constitute as a Drainage District that portion of the Dingee Irrigation District to be benefited by the Commission's drainage works now under construction.

The towns of Nar-Nar-Goon and Tynong within the Mornington Peninsula Waterworks District are to be proclaimed an Urban District to be known as the Nar-Nar-Goon and Tynong Urban District.

PART III.—WATER SUPPLY.

WATER DISTRIBUTION.

In Victoria, the total area, of lands supplied with water for domestic and stock purposes or for irrigation, excluding the metropolitan areas, amounted to 15,398,700 acres.

During the earlier part of the year under review, dry conditions continued and the volume of water in the Commission's main storages at the commencement of the irrigation season was far below normal requirements, particularly in the Goulburn System, where at the beginning of the season during the peak demand, the quantities of water delivered to each district in that System were limited to sufficient water to meet one-fifth of the water rights of the districts within 30 days. When the demand for water lessened later in the season it became possible to meet all demands of irrigators for water rights and sales quotas as required. It was not necessary to impose restrictions on irrigation supplies in the districts of the Torrumbarry System.

On 1st July, 1945, the volume in the storages which supply the Goulburn System was only 146,305 acre feet, but when water was turned into the districts for the commencement of irrigation on or about 16th September, 1945, the volume in the storages had risen to 627,790 acre feet.

The water delivered to lands in the districts of the Torrumbarry System amounted to 163,785 acre feet. This included delivery of 88 per cent. of the allotted water rights in addition to domestic and stock supplies and "sales" equal to about 21 per cent. of the allotted water rights.

Throughout all irrigation districts the total delivery of water to lands was 557,625 acre feet, including 50,012 acre feet supplied by pumping.

The irrigation districts of Red Cliffs, Merbein and Nyah received 48,094 acre feet of water pumped direct from the River Murray, while the high level waterworks districts of Millewa, Coreena, Carwarp and Yelta, also received 17,067 acre feet for domestic and stock purposes from the same source. The Wimmera-Mallee waterworks districts were supplied with 49,900 acre feet of water from the Loddon and Goulburn Systems in addition to water which was supplied from the Wimmera-Mallee storages.

The volume of water released from the Waranga Reservoir amounted to 533,233 acre feet. Of this quantity 215,271 acre feet were delivered to irrigators and 25,430 acre feet passed on to the Wimmera-Mallee Waterworks districts at Loddon Weir, indicating that about 45·14 per cent. of the water released was delivered. Water was also released from the Goulburn Weir and from the Goulburn Waranga Channel for the eastern portions of the Goulburn System, and amounted to 189,611 acre feet; of this quantity 75,681 acre feet or 39·38 per cent. was delivered to irrigators. Thus, of the total volume of water (722,844 acre feet drawn from the headworks of the Goulburn System), the Commission delivered 315,382 acre feet, equal to 43·6 per cent.

Returns of water delivered to individual irrigation districts for irrigation and other purposes in the year 1945–46, and all water released from headworks for the supply of Wimmera-Mallee and other waterworks districts for the year under review, are included as appendices to this report.

At the 1st July, 1945, the Commission's main water storages with a total capacity of 1,883,840 acre feet, contained 440,505 acre feet. At the termination of the irrigation season, or on about 15th May, 1946, the total volume stored was 1,254,170 acre feet and at the 30th June, 1946, it had increased to 1,420,110 acre feet.

GOULBURN DIVISION.

The Goulburn Division comprises the irrigation districts, of Shepparton, North Shepparton, South Shepparton, Katandra, Rodney, Tongala-Stanhope, Deakin, Rochester, Campaspe and Murray Valley, and includes also the drainage districts of Shepparton, Rodney, Tongala-Stanhope and Rochester, and the flood protection districts of Loch Garry and Kanyapella.

GOULBURN DISTRICTS.

Irrigation for the 1945-46 season commenced about the middle of September, and continued until 15th May, 1946. At the commencement of the irrigation season the storages serving the Goulburn Division held 627,790 acre feet of water out of a total storage capacity of 660,100 acre feet.

Many irrigators have shown a tendency to develop their properties far beyond the water rights that have been alloted to their lands, and in order to safeguard both the irrigators and the Commission against development beyond the capacity of the water supply system, the Commission after consultation with the Advisory Boards concerned, and after consideration of alternative proposals, agreed at its meeting held on the 7th January, 1946, that the basis of "sales quota" for the Goulburn System would be:—

- (i) The average "sales" during the three base years, 1941-42, 1942-43, and 1943-44. In cases where, owing to absence of occupier or working member of his family on military service, little or no water was taken in any or all of the three years named above, "sales quota" may be average usage for three years preceding the period of absence on military service, excluding 1938-39 when, owing to drought conditions, water in excess of water rights was not available; or
- (ii) Thirty per cent. of water rights with a maximum allocation, including water rights, of not more than 100 acre feet; or
- (iii) In the case of holdings where the water right on the 31st October, 1945, was 30 acre feet or less, the "sales quota" may be increased above that provided under (i) or (ii), to give a total allocation of water, including water right, equal to one acre foot per acre of commanded and suitable land with a maximum of 40 acre feet. This will not apply to subdivisions made after 31st October, 1945.

In no case will "sales" be provided for watering of lands, which have not been properly prepared for irrigation; the latter limitation, however, will not prevent the watering of cereal crops which can be irrigated satisfactorily.

Works.

With the ending of the war additional labour became available and the Commission has made every endeavour to overcome some of the delayed maintenance work in the various districts in the Goulburn Division.

Mechanical excavators were used in the Rochester and Rodney districts for desilting channels and $14\frac{1}{4}$ miles were dealt with in this way. This work has materially improved the water supply along the sections treated and in addition the clearing of "cumbungi" rushes during the season has reduced the growth of this weed to a minimum. In the Deakin District landholders assisted the Commission in the desilting of channels by the provision of teams.

MURRAY VALLEY DISTRICT.

The Murray Valley District has been extended to include the whole of the land in that district for which water will be available and which the Commission proposes to reticulate with channels for irrigation purposes. The area of the district is 269,312 acres, of which 103,200 acres were supplied on a one-in-four basis with water for irrigation during the year. Channel construction has been continued and a further 9,300 acres will be supplied with water during the forthcoming year.

Irrigation development in the Murray Valley is on a high standard and landholders are taking particular care to have their lands properly prepared to receive water. During the year 1,690 acres were surveyed by the Commission on behalf of landholders and designs for the layout of the areas have been prepared for them. This has proved of great assistance both to the landholders and the Commission.

In new sections of channels in certain soils trouble has been experienced with leakages which have occurred mainly through the undisturbed soil. These sections are being treated with asbestos cement sheets to form a cutoff in the banks at the worst sections.

Drainage.

Labour being more plentiful during the year, the maintenance of drainage works has received special attention, and in the Shepparton district the Main Marionvale Drain has been extended to connect with the Wunghnu Outfall at Katandra.

This has greatly improved the drainage outfall in Katandra and has enabled the deepening of the Katandra drains to provide better drainage facilities. An excavator has been employed almost continuously on the Shepparton outfall drains and the drainage system in that district is now in a very satisfactory condition. The Rodney and Tongala–Stanhope districts drains have also received attention during the year. Considerable improvement in drainage channels has been effected.

Goulburn Main Channels.

The repairs on the Goulburn-Waranga Main at 5 miles 20 chains effected during the previous winter have proved satisfactory and no further trouble has been experienced. Minor leakages at 3 miles 5 chains have been controlled and repairs undertaken as soon as the water in the channel was cut off. On the Waranga Western Main Channel repairs were made to the concrete spillway at Wanalta Creek, and other maintenance work carried out where necessary. On the East Goulburn Main Channel the western tube of the syphon at the Honeysuckle Creek was relined with eight inches of reinforced concrete. Maintenance work was carried out on the Waranga-Deakin Channel particularly in respect to scours which develop on the inside of the banks in the first 5 miles of the channel because of the constant high level of the water.

Subdivisions.

During the year a large number of private subdivisions within irrigation districts, particularly Shepparton, Rochester, Tongala–Stanhope and Murray Valley were submitted to the Commission. These subdivisions involved the Commission in many minor works to meet the requirements of the subdivided areas, the cost of all such work being met by the subdividors. The Commission is perturbed at the number of private subdivisions effected during the year which resulted in small holdings with water rights far too small for what might be called "living areas".

FLOOD PROTECTION DISTRICTS.

Maintenance is being carried out where necessary in the various flood protection districts.

LODDON DIVISION.

The year 1945–46 was noticeable for considerable variations in seasonal conditions throughout the Loddon Division, which runs from the south of the Waranga Western Main Channel to beyond Swan Hill.

Although fair rains during August indicated a later than usual commencement of the watering season, fairly dry conditions toward the end of that month set in and the demand for early supplies of water was keen. These dry conditions prevailed into mid-summer and the supply system was taxed to meet requirements. Good rains during February eased the demand in the autumn and together with a lack of stock due to the previous dry season helped to keep the demand below normal during the latter part of the irrigation season. Windy and threatening dry conditions toward the end of the season extended the watering requirements and the season did not terminate until 15th May.

The previous abnormally dry season with almost continuous dust storms was reflected in the condition of the supply channels in northern districts by the loss of capacity due to sand-drift. In the early part of the season it was necessary to concentrate all available excavating machines in those areas to enable water supply requirements to be met.

Favourable weather conditions later in the season brought about heavy growth of water weeds in the main and lateral channels necessitating continuous patrolling and dragging of the channels to maintain supplies. The easing of war conditions, however, made it possible to increase the amount of mechanical plant available for channel maintenance, and this has resulted in a greatly improved supply to areas where formerly the position of supply was difficult. The position with regard to urgent maintenance work on channel structures was, however, made difficult because of shortage of materials and this difficulty was accentuated because the majority of channel structures in the Loddon Division which were constructed by the old Trusts have passed their useful life.

IRRIGATION.

Pyramid Hill Centre.

In the districts administered from the Pyramid Hill Centre the total area of crops irrigated for the year was 61,036 acres compared with 49,237 acres during the previous year. Nine thousand acres of this increase was due to crop watering. The increased area

watered and the reduced water deliveries was the result of the improved rainfall of 1,572 points as against 697 points of the previous year. Competitions for pastures and summer fodder crops under the direction of the Pyramid Hill Agricultural Society attracted large entries.

Cohuna District.

In the Cohuna District the growth of "disticthum" in drainage channels threatens to become a serious problem and has necessitated constant maintenance.

During the year the Box Creek Weir was repaired and a considerable amount of beaching placed around the inner bank of Kow Swamp as protection against wave action during windy weather.

To guard against the possibility of the flooding of properties adjacent to Heppell's Lagoon on Taylors Creek, a channel has been constructed to divert surplus flood waters into Splatts Lagoon below Berry's Regulator.

Kerang, Koondrook and Mystic Park Districts.

Considerable difficulty has been experienced in the removal of drift sand and weed growth from water supply channels because of unavoidable lack of sufficient maintenance during the war years.

Kerang East Drainage.

The Kerang East Drainage District is functioning well and lands therein are showing considerable improvement. Works to provide Murrabit Drainage system with a gravity outfall are making good progress.

Swan Hill District.

All irrigation requirements in the Swan Hill District were met and conditions were greatly improved by a rainfall of 1,711 points during the season.

During the year a Committee comprising representatives of the Council for Scientific and Industrial Research, Department of Agriculture, the State Rivers and Water Supply Commission and local settlers was set up for the investigation of water table movement and salting troubles on the Tyntynder Flats. Considerable progress has been made by the Committee in the installation of test wells throughout the area and a report is expected following the next watering season.

Loddon, East Loddon, and West Loddon Districts.

The Loddon United Waterworks Trust has been abolished and the new Waterworks districts of Loddon and East Loddon, administered from Pyramid Hill, and West Loddon, administered from Boort, were constituted on the 1st July, 1945. The lands in these districts include the old Loddon United Waterworks Trust area, together with an area excised from the Normanville District.

Structural works on the Barrapoort Branch Channel have been completed, and an additional area of 1,410 acres in the vicinity of Barrapoort has been added to the Normanville District.

In the West Loddon Waterworks District, an outlet constructed from the Waranga–Mallee Channel at about 28 miles from the Loddon River greatly facilitated tank filling from the Catumnal Channel beyond this point.

In both the Normanville and West Loddon Districts, much difficulty was experienced in securing sufficient teams for the removal of drift sand and only the most urgent work could be completed.

GIPPSLAND AND SOUTHERN DIVISION.

BACCHUS MARSH.

Drought conditions experienced in 1944–45 persisted during half the year under review, and the season opened with Pykes Creek Reservoir containing only 2,936 acre feet against a total storage capacity of 19,456 acre feet. This made it necessary to restrict irrigation, and for the second year in succession a delivery of 5 inches of water for land with water rights was the utmost which the storage could provide, and irrigation was suspended on 22nd December.

Good rains were received from January onward, 13.6 inches being recorded for the six months to the 30th June, which averted serious crop losses.

Attempts were made to supplement irrigation supplies by sub-surface water, but the four 10-inch bores installed failed to give satisfactory discharges. Limited supplies from three small private bores were of some assistance on market garden plots.

Urban supplies were maintained with some restrictions to the hours of garden watering.

At Bacchus Marsh, despite delay in delivery of materials, 162 large and 244 small-type Dethridge Meter Wheels were made by the Commission.

WERRIBEE.

As the volume of water in Melton was only 6,280 acre feet, it became necessary to restrict irrigation supplies during the season, and $3\frac{1}{2}$ acre inches for each acre foot of water right was supplied before the end of December. Rains in January permitted the distribution of an additional small quota, and later good rains obviated the need of water supplies for irrigation for the remainder of the season.

During the water shortage, landholders sank many bores of 4 inches to 8 inches diameter with varying success. About 90 of these bores gave an average yield of 5,000 gallons per hour, the water from two-thirds of them being highly mineralized. The bores were, however, of considerable assistance on small market garden areas. One good bore with a discharge of 30,000 gallons per hour permitted the watering of 60 acres of pastures and 30 acres of market garden.

MAFFRA-SALE.

Heavy demands for irrigation supplies were met during October, but rain during November caused a suspension of delivery. In December and January, peak-rate deliveries were required again until rain fell at the end of January, and a definite break in the weather in the last weeks of February brought irrigation to a close for the season. Water deliveries to farms amounted to 19,993 acre feet or 88 per cent. of allotted water rights.

New supply works were limited to two short channels brought about by subdivisions, and to the excavation of half a mile of drain discharging into the Serpentine System to improve conditions in Mewburn Park.

Several miles of earthworks for an extension of the channel system to The Heart, east of Sale, were undertaken and structures will be installed when materials are available.

General maintenance was carried out whenever practicable in the district.

PROPOSED EXTENSIONS.

MAFFRA-SALE.

Good progress has been made with the investigations for the supply of water for irrigation purposes to the Nambrok-Denison area, and additional lands between the Thomson and Avon Rivers, the whole of which, with the existing Maffra-Sale district, will form the Central Gippsland Irrigation Project.

Contour surveys and field work for soil surveys of Nambrok-Denison have been completed, and plans of soil survey are in course of preparation. Similar work is being undertaken between the Avon and the Thomson Rivers. From information available from soil surveys, it has been possible to indicate the area in Nambrok-Denison which will probably be suitable for the establishment of soldier settlers in this locality.

Topographical surveys for the large main channels to serve all these lands have been made, and included examination of a proposed supply to the south-eastern portion of the district, and its extensions by means of a carrier channel from the Main Southern channel, involving the crossing of the Macalister River between Riverslea and Bundalaguah.

WIMMERA-MALLEE DIVISION.

The Wimmera-Mallee Domestic and Stock System supplies water to almost the whole of the region known as the Wimmera, and to large portions of the Mallee districts, serving in all an area of some 11,000 square miles in which is carried on wheat farming and pastoral pursuits. The development of those areas would not be possible to anything like the present extent without an artificial water supply, as the ground in the Wimmera is very absorbent and does not shed water easily, whilst in the Mallee rainfall is insufficient to provide an adequate runoff.

The headworks of the Wimmera-Mallee System are located in the vicinity of the Grampians mountains, and supplementary flows are diverted to the channel system from the Goulburn Channels and the Loddon River. Forty-five towns with a population of 40,000 people obtain their water supplies from the Wimmera-Mallee channels, whilst the total

population throughout the area is 80,000. Farmers in the Wimmera-Mallee Districts are supplied with water for domestic and stock purposes once a year during the winter or spring months—it being their responsibility to provide storages sufficient in size to meet their domestic and stock requirements for a year.

This system of water supply was inaugurated in 1882 by Local Waterworks Trusts, which were taken over by the Commission in 1909. Since then, considerable development has taken place; there are now 6,600 miles of main and distributary channels, whilst the total storage capacity supplying the Wimmera–Mallee channels is 206,480 acre feet.

The total capital cost of the system to date has been approximately £3,000,000.

Between 1934 and the year under review rainfall in these areas has been below average in seven of the twelve years. In 1938, 1940, 1943, and 1944 rainfall was very much below average, whilst 1938 and 1944 could be classed as years of extreme droughts. Dry conditions persisted until August, 1945, when useful rains, although insufficient for catchment purposes, relieved the agricultural position.

The period from 1941 to 1945 could be classed as the worst that the Wimmera–Mallee districts have ever experienced, as not only did agriculture to a great extent fail in many parts of those areas, but the sand-drift problem became tremendous, silting up of the Commission's water supply channels by drifting sand being on a scale never previously experienced. The task of the removal of sand from the channels was a colossal one, involving the shifting of over 12,000,000 cubic yards of sand at a cost of £323,000 in one year.

During the year 1945–46 the Commission had to pump water from Pine Lake, which had fallen below the gravitation level, and also from the River Murray at Nyah, in order to supplement supplies for domestic and stock purposes from the storages. The usual watering period in the Wimmera–Mallee Water Supply System is from the 1st May, to the 31st October, but owing to the lack of horse teams and the tremendous quantities of sand which had to be removed from the channels, the completion of the 1945 watering was delayed until February, 1946, when drought-breaking rains which fell over the whole area and water supply catchments, considerably replenished storages. Subsequent rains ensured adequate supplies of water for the 1946 watering season.

Although watering during the 1945 season was carried out under extremely adverse conditions and at a tremendous cost, nearly all the farms in the Wimmera-Mallee areas dependent upon the Commission's channels received sufficient water for domestic and stock purposes to enable them to carry on and retain their stock, thus averting the tremendous losses of stock worth millions of pounds which occurred in the 1902 and 1914 droughts.

SWANWATER WEST.

Work on the extension of the Wimmera United District to the Swanwater West area, comprising about 60 square miles of good wheat land, proceeded in accordance with the men and teams available. Of a total length of 36 miles of channel required, 10 miles have been excavated and all structures up to the 25 mile peg have been completed.

It is anticipated that Lake Volcano storage, which will in future provide a supplementary water supply to the Borough of St. Arnaud Waterworks Trust, will be filled from the Charlton–Swanwater West Channels about October, 1946.

WYCHITELLA DISTRICT.

The Wychitella Waterworks District, which was constituted in 1945, contains an area of 220 square miles of good agricultural land east of Charlton. The district will obtain its domestic and stock water supply from the Wimmera–Mallee System by means of an offtake from the Charlton Channel, crossing the Avoca river and extending in an easterly direction almost to Korong Vale.

Survey work on the location of distributary channels is in progress and a considerable length of channelling should be in operation next watering season.

The Wychitella channel system will also provide supplementary water supplies to the township of Korong Vale, which up to date has relied upon the Victorian Railways Department, and will also supply the township of Wedderburn. The main channel which is 68 miles long will, it is anticipated, be completed in readiness for the 1946–47 watering season. The construction of the urban storage for Korong Vale located about one mile north of the town was undertaken by the Commission with its mechanical plant, and within a few months this storage which will have a capacity of 63,000,000 gallons will be ready to receive water during the annual Wimmera–Mallee domestic and stock run in 1947.

WALPEUP WEST DISTRICT.

The Walpeup West district which lies between Underbool and the South Australian border is fortunate in having a good supply of underground water available at depths of from 100 to 900 feet.

The majority of landowners in this district have their own bores, but for general use 100 public bores have been sunk and are maintained by the Commission.

Owing, however, to shortage of materials, maintenance of windmills and tanks has been difficult, but will be improved as soon as materials become available.

Domestic and Stock Systems supplied from the River Murray.

The Carwarp, Carwarp Central, Yelta, Coreena and Millewa domestic and stock systems are supplied by means of pumping from the River Murray. Channels in all these districts, however, have been very badly affected by drifting sand brought about by the prolonged drought, and the annual run was completed only under considerable difficulties and at very great cost.

Coreena District is supplied by pumping from a point some miles downstream from the lock on the River Murray at Robinvale. Yelta District is supplied by an extension from channels of the Merbein Irrigation District, and Carwarp and Carwarp Central Districts by extensions from the Red Cliffs Irrigation District. The Millewa District has a separate system supplied by four pumping stations, the first of which is at Lake Culluleraine and which distribute water at various lifts to 778 miles of channel.

NYAH IRRIGATION DISTRICT.

Because of heavy rains only five irrigations were provided for the Nyah Irrigation District, necessitating the pumping of 8,350 acre feet of water compared with 10,531 acre feet in 1944–45, 9,718 acre feet in 1943–44, and 9,047 acre feet for the previous year. Heavy rains in January and February, of 1946, followed by showery weather during the drying period, considerably reduced the fruit crops. As a result the total yield for the district amounted to 2,392 tons compared with 3,352 tons in 1944.

RED CLIFFS AND MERBEIN DISTRICTS.

Owing to dry conditions, irrigation in both districts commenced in August, 1945, and in addition a "frost" irrigation to reduce liability of vines to frost damage was given at Red Cliffs from the 21st to 26th September.

Water was made available for six irrigations in both districts, but because of early autumn rains, limited areas only were watered at the latter end of the season. These late autumn rains seriously affected both the quality and quantity of the dried fruit crops by causing mould in the fruit and delaying harvesting. The quantity harvested at Red Cliffs and Merbein was 48,897 tons, which was little more than that of the previous relatively low year and only two-thirds of the record year 1939–40.

Owing to the curtailment of irrigation in the autumn the quantities of water pumped were a little less than those of the previous year, namely, 38,306 acre feet at Red Cliffs and 30,321 acre feet at Merbein. The depth of water pumped per acre irrigated for the season was only slightly affected by the autumn rains, the difference for the whole season between this year and last year being 0.4 inches at Red Cliffs and 0.6 inches at Merbein. The quantities of water taken are, however, regarded as excessive and much greater than required for maximum production. The Commission is endeavouring to develop a suitable meter to measure deliveries to vineyards with a view to installing such meters on all holdings and charging for excess water on a quantative basis.

Particulars of the six irrigations given during 1945-46 are:-

Irrigation, Number,	Period.				Acre Feet Pumped.	Average Depth pe Watering.

DRAINAGE.

RED CLIFFS AND MERBEIN.

Necessary maintenance has been carried out on the underground drainage systems in these districts, in addition to which minor extensions of 19 chains of 4-inch earthernware pipe were carried out.

NYAH.

After a considerable period of inactivity due to lack of men and materials, the extension of drains for Drainage System "A" at Nyah has made substantial progress, a total of 7 miles of pipes having been laid since the resumption of the work.

URBAN SUPPLIES.

WIMMERA AND MALLEE.

During the year the storages of the 37 pipe-reticulated townships in the Wimmera and Mallee directly controlled by the Commission had their supplies of water replenished from the Wimmera-Mallee domestic and stock system with which they are connected. In addition bulk supplies of water were made available from this system to the towns and townships of Horsham, Murtoa, Warracknabeal, Donald, Charlton and Underbool, which are controlled by Local Waterworks Trusts.

However, extreme drought conditions and the considerably reduced quantities of water in the Wimmera-Mallee main storages and doubts as to the prospects of replenishment of these storages made it necessary to impose restrictions on the use of water for gardens. Such restrictions continued until March, 1946, when drought-breaking rains replenished the Grampian storages.

Water for the towns of Carwarp, Meringur, Nyah, Nyah West, Piangil, Red Cliffs and Werrimull was supplied from the River Murray, and it was not necessary in those cases to impose any restrictions on urban supplies.

SAND DRIFT.

WIMMERA-MALLEE.

As far back as 1933 a Committee was appointed to report on the sand-drift problem in Mallee areas, and in its report the Committee stated that unless methods of farming were revised the sand-drift problem would assume proportions which might necessitate abandonment of parts of the Commission's channel system. Unfortunately insufficient attention was given to this report and the farming community in general continued to overstock and to farm their holdings in the Mallee in a manner which accentuated soil erosion.

As a result of this, and following upon the abnormal drought years of 1944–45, the Commission had to face the enormous task of removing 12,000,000 cubic yards of sand from its channels for the 1945 watering season, and many miles of channel which had been cleaned out in readiness for the 1945 watering were again filled with drift sand. This required the removal, before the 1946 watering could be carried out, of more than average yearly quantities of sand from the channels.

The Commission must continue to strongly emphasize the necessity for farmers to co-operate in every way in the prevention of soil erosion by adopting farming methods which will reduce this menace to a minimum. Unless proper soil control methods are used

in the Wimmera-Mallee areas the Commission will eventually be faced with the abandonment of its channel system in those sections of the area where the cost of sand cleaning is becoming out of all proportion to the benefits and the revenue received.

The following table shows the cost of the removal of sand from the domestic and stock channels in the Wimmera-Mallee Area including the Millewa, Carwarp and Coreena Districts.

The table covers the years 1928-29 to 1945-46.

		Finan	cial Year.			Amount.	Calendar Year (Watering Year).	Amount.
						£		£
928-29					\	119,920	1928

MAIN PUMPING STATIONS.

The Commission's main pumping stations, are situated on or near the River Murray and serve the waterworks districts of Millewa, Yelta, Carwarp and Coreena and the Irrigation Districts of Red Cliffs, Merbein, Nyah and Tresco. In addition there are numerous other plants for pumping water for domestic and stock supplies to lands above the normal gravitation level in the central and western gravitation supply areas. Water supplies to a considerable number of townships also involve pumping.

The replacement of the six original boilers installed at Red Cliffs in 1921 has been advanced further by the letting of tenders for two modern water tube boilers. When this work has been carried out four of the original six boilers will have been replaced.

Great difficulty has been experienced by the State Rivers and Water Supply Commission in obtaining sufficient briquettes and black coal to meet the requirements for a full season's watering to be provided by the Red Cliffs Power Station.

Fuel supplies at Red Cliffs have been barely sufficient to meet each watering and there have been no reserves at all. The threat of continued shortages of briquettes and coal makes the outlook for full waterings in the coming season extremely serious.

The Commission is, therefore, awaiting with considerable interest the completion of the investigations by the State Electricity Commission and other Victorian Authorities into the proposal to establish a Central Power Station at Mildura.

At the Millewa, Nyah and Tresco pumping stations the fuel position has been satisfactorily met with adequate supplies of firewood from private contractors and it has been possible to maintain a reserve of fuel to cover a period of two years.

INVESTIGATIONS AND DESIGNS BRANCH.

The Investigations and Designs Branch carries out the investigation and design of water conservation and distribution projects for the development of the water resources of the State, and for the extension of existing supply systems. The Branch consists of five sections, namely:—

- (1) Water Resources, including Hydrology and Hydraulic Research.
- (2) Dam Engineering, which includes Earth and Concrete Dams, Outlet and Control Works, Field Investigations, Geology and Design Studies.
- (3) Town Water Supplies.
- (4) Rural Water Supplies, involving Irrigation, Drainage and Domestic and Stock Water Supply Systems.
- (5) The Executive Section, which undertakes Programme and Production Planning, Special Investigations, Specifications and Contracts, Drafting and Tracing, Routine Office services and the preparation of publications, films and displays.

The need for the further development of the State's water resources has increased the demands upon the Investigations and Designs Branch.

At 30th June, 1946, the number of investigations in progress and awaiting attention totalled 151, of which 112 are classed as major investigations. The total number of major investigations in progress during the year was 14, but the increasing number of projects now under construction and urgently requiring detailed plans, together with the continuing loss of skilled staff, will greatly reduce the number of major projects on which it will be possible to carry out planning during the coming year.

Brief descriptions of the more important investigations of the Branch carried out during the year are as follows:—

WATER RESOURCES INVESTIGATION.

Broken River.

Further work on the investigation of the water resources of the Broken River in connexion with supplies to rural areas in the Shires of Benalla, Shepparton and Tungamah has been carried out, and included investigations of stream flows and of possible storage sites to determine the most suitable localities for and sizes of storages as well as the possible regulated discharges from such storages. This work has been suspended owing to loss of officers who were engaged on investigations.

CAMPASPE RIVER.

A comprehensive hydrological investigation of the Campaspe River Basin is in progress and will enable the ultimate development of the resources of this Basin to be determined.

Investigations have been continued into the possibilities of greatly enlarging the Eppalock Reservoir and plans suitable for presentation to the Parliamentary Public Works Committee are approaching completion.

GOULBURN RIVER.

Eildon Reservoir.—Previous investigations have shown that it would be practicable to provide a storage of 2,350,000 acre feet of water at the site of the existing Eildon Reservoir, which has a capacity of 306,000 acre feet. A number of alternative designs including concrete and earthen dams have been prepared for the dam at this site, and it would appear that an earthen dam approximately 250 feet high and some 3,300 feet in length and involving some 13,000,000 cubic yards of earth and rock fill would be most suitable. Geological and topographical surveys of the site for this dam have been made, and field investigations continued for the purpose of examining the foundation and abutment conditions at the dam site and the types and properties of the materials available for construction. This work has involved the design of special apparatus for sampling and testing the soils and rock available for construction, the sinking of bores, shafts and trenches, and the construction of trial embankments for the study of the behaviour of available materials under construction processes.

Preliminary designs and reports on this project have been prepared and are ready for consideration by Dr. J. L. Savage, the eminent American engineer, who has been retained by the Commission as a consultant on this project.

The Chief Designing Engineer, Mr. R. G. Knight, and the Designing Engineer for Dams, Mr. M. G. Speedie, have already had initial discussions with Dr. Savage in Denver, U.S.A., and it is expected that Dr. Savage will visit Australia and inspect the site in September, 1946. An aerial survey of the Eildon Reservoir storage basin has been undertaken by the State Aerial Survey of the Department of Crown Lands and Survey, and it is anticipated that topographical plans of this basin will be available before the end of 1946. A survey along two contours now being carried out by the Commission will provide reliable ground control for the aerial survey.

Investigations of possible other sites on the Goulburn River and its tributaries upstream of Eildon Reservoir have also been made and a report embodying the results of these investigations has been completed.

Goulburn-Waranga Main Channel.—The Goulburn-Waranga Main Channel, some 23½ miles in length, conveys water from the Goulburn Weir to Waranga Reservoir, and also supplies the eastern portion of the Rodney Irrigation and Water Supply District. The increased quantities of water that would become available when the capacity of Eildon Reservoir is increased to 2,350,000 acre feet would be largely utilized by diversion from the Goulburn Weir to the Waranga Basin and Goulburn Irrigation System. Investigations have shown that a capacity of 3,000 cusecs for the Goulburn-Waranga Channel would provide for the maximum utilization of the waters of the Goulburn River, and the ultimate development from this source of areas west of the Goulburn River. This capacity could best be provided by retaining the existing channel to carry 1,500 cusecs and the construction of a new duplicate channel of similar capacity.

A special aerial survey of the route of the new channel was made for the Commission by the State Aerial Survey, and this greatly facilitated the preparation of preliminary designs and estimates. A report was submitted to the Parliamentary Public Works Committee in February, 1946. At the time of submission of the report, the estimated cost of this work was £1,360,000, but changes in conditions for workmen and the reduction of hours from 44 to 40 per week as from the 1st July, will increase the cost to an estimated amount of £1,620,000.

LODDON RIVER.

Following the approval of the Government for the construction of a dam to impound 120,000 acre feet of water at the Cairn Curran site, investigations and surveys have been extended to obtain the information necessary for the detailed design of this structure. This work has included a detailed examination of the site by bores and shafts, and testing of the available construction materials. Final designs of the dam and a topographic survey of the basin are now in progress.

Investigations of sites for storages on the upper reaches and tributaries of the Loddon River were continued, and surveys of the Tullaroop Creek between Carisbrook and Clunes, the Loddon River near Glenluce, and the Bet Bet Creek near Bung Bong have been completed. Preliminary designs and estimates are in course of preparation for a dam on the Tullaroop Creek near Rodborough. This storage would not only safeguard supplies to the town of Maryborough, but also would augment the regulated outflow from Laanecoorie Reservoir for irrigation. A preliminary report for presentation to the Parliamentary Public Works Committee will be completed by September, 1946.

Further work on other storages on the Loddon River and its tributaries has been suspended owing to lack of professional staff.

RIVER MURRAY.

Hume Reservoir.—In view of the proposed enlargement of the capacity of this reservoir, investigations are being made to determine the most suitable method of protecting the township of Tallangatta from inundation.

Torrumbarry System.—Preliminary investigations of the Torrumbarry Irrigation System which includes the districts of Cohuna, Koondrook, Kerang, and Swan Hill, have been completed, and a report on the construction of main channels to bypass the Kerang Lakes and to replace the natural water courses now used as irrigation water carriers has been presented to the Government.

HYDROLOGY OF VICTORIAN RIVERS.

From time to time investigations have been made of specific projects to utilize the water resources of the various rivers in Victoria. In this work, it is impossible to consider the climatic and hydrologic characteristics of one river basin apart from those of the

neighbouring basins. Consequently, an investigation is now in progress to co-ordinate previous work and investigate the meteorology and hydrology of the rivers of Victoria on a systematic and comparative basis. A comprehensive report on the hydrology of the Campaspe River Basin has been prepared, and similar reports are in progress for the Loddon River Basin and the Lake Wellington Basin. However, it is anticipated that, on the completion of these reports, the work will have to be suspended and further hydrological investigations will have to be deferred owing to loss of officers engaged on this work.

WERRIBEE RIVER.

Further investigation of storage possibilities on the Werribee River and tributaries was carried out during the year. It has included detailed examinations of and designs and estimates for—

- (a) a dam on the Lerderderg River near Sardine Creek to impound 19,000 acre feet;
- (b) the raising of Pyke's Creek Reservoir and the construction of improved facilities for diverting the flow of the Upper Werribee River through the inlet tunnel to this reservoir; and
- (c) a dam on the Werribee River near Cobbledick's Ford to impound 19,300 acre feet.

It was found that the last proposal, i.e., the construction of a dam near Cobbledick's Ford, was the most suitable, and preliminary designs and estimates for a dam to impound 19,300 acre feet at this site at a cost of £630,000 have been completed and a report presented to the Parliamentary Public Works Committee.

PROJECTS UNDER DEVELOPMENT.

MURRAY VALLEY IRRIGATION.

Investigation surveys and designs were continued during the year for extensions to the irrigation channel system to serve the westerly portion of the district. Designs and plans were prepared for approximately 150 miles of irrigation channels, involving the excavation of 640,000 cubic yards of earthworks and some 700 channel and control structures and road and occupation crossings.

In view of the Government's proposal to acquire some 60,000 acres of the best lands in the Murray Valley District for soldier settlement purposes, an investigation has been made of the effect that the closer settlement of this area would have on the design, construction, and operation of the channel system. Contour surveys are in progress, and preliminary designs are being prepared for the land subdivision, irrigation, and drainage of the proposed soldier settlement area.

The design of the Irrigation System has been made with the drainage of the whole district in view, and investigations have shown that the drainage system will involve some 275 miles of drainage channel.

CENTRAL GIPPSLAND IRRIGATION.

Investigation and design of the channel system to supply water to the Nambrok–Denison area has been continued. Investigations are also in progress to determine the ultimate development of irrigated land between the Thomson and the Avon Rivers. This has involved an examination of the capacity of the existing Main Northern and Southern Channels from Glenmaggie Reservoir to the Maffra–Sale Irrigation District. To obviate the need for enlargement of the Main Northern Channel, investigations are being made of several alternative methods of supplying the southern portion of the Maffra–Sale District. Hydrographic investigations of the flows in the Macalister River have been made, and preliminary designs and estimates have been completed for increasing the storage at Glenmaggie Reservoir to 150,000 acre feet.

In connexion with the special problems associated with the Central Gippsland Project, the Assistant Chief Designing Engineer, Mr. T. A. Lang, and the Executive Engineer, Mr. C. L. Sanders, visited New Zealand in February and March, 1946, and made an inspection of similar work that has been carried out in connexion with irrigation projects in that Dominion.

GLENELG RIVER—DOMESTIC AND STOCK.

Rocklands Dam and Outlet Channel.

The preparation of final detailed plans for the Rocklands Dam now under construction on the Glenelg River near Balmoral, and the outlet channels therefrom are nearing completion. The water stored by this dam will be conveyed by channel to the Taylors Lake and Pine Lake storages, which serve the Wimmera–Mallee Domestic and Stock Water Supply System.

COLIBAN.

Lauriston Reservoir.

Final designs for the installation of spillway gates at Lauriston Reservoir, to increase the capacity from 12,000 to 16,000 acre feet were completed, and tenders have been accepted for the manufacture and installation of the gates.

TOWN WATER SUPPLIES.

BALLARAT-WHITE SWAN DAM.

Advice was given regarding the design for the proposed White Swan Dam to be constructed by the Ballarat Water Commissioners. This dam, which will be an earthen embankment 130 feet high and 1,570 feet in length, will store some 3,000 million gallons to augment supplies to Ballarat.

MERBEIN AND RED CLIFFS.

Preliminary investigations for the improvement of supplies to the townships of Merbein and Red Cliffs have been completed and reports prepared. These proposals provided for improvements to the existing reticulations, new high-lift pumps, elevated storages and treatment plants.

TALLYGAROOPNA.

Preliminary investigations and estimates for the provision of a town water supply for Tallygaroopna have been completed and final designs for construction will be completed in August, 1946.

OTWAY WATERWORKS DISTRICT—NOORAT AND GLENORMISTON.

The proposed scheme provides for a pipe line from an offtake from the main Otway Supply pipe line near Terang to a one-million gallon service basin at Noorat, and pipe lines to Noorat and Glenormiston. The service basin will normally be filled by gravitation, but a booster pump will be installed to provide for the periods when water is being supplied to the Warrnambool storage. Supply from the service basin will be by gravitation.

GENERAL.

In accordance with the Government's policy for the improvement of the water supply to country towns, preliminary investigations in regard to a number of towns were commenced. However, owing to the necessity to concentrate available staff on projects already under development and the impossibility of obtaining suitable additional staff, work on these projects has been suspended.

IRRIGATION, RURAL WATER SUPPLY AND OTHER PROJECTS.

Nyah.

Very little progress with the investigations and designs for further sub-surface drainage of the Nyah Irrigation District has been made during the year owing to lack of staff. A topographic survey of the area to be served is in progress, and has been greatly facilitated since aerial mosaics prepared by the State Aerial Survey have become available.

HUNTLY-ELMORE DOMESTIC AND STOCK WATER SUPPLY.

Preliminary surveys have been carried out, and investigations and designs are in progress for a domestic and stock water supply to lands in the Huntly-Elmore area between Goornong and Warragamba. A preliminary report on this project is nearing completion, and should be ready for consideration by the landholders in November, 1946.

PIANGIL IRRIGATION.

Preparation of preliminary designs and estimates have been continued for alternative schemes to supply an area of 7,000 acres of lands near Piangil by pumping from the River Murray. A report on this project should be ready for consideration by landholders in October, 1946.

BOORT AND DEAKIN IRRIGATION SYSTEMS.

Investigations for the remodelling of the channels in the Boort and Deakin Irrigation and Water Supply Districts, and possible extensions thereof have had to be suspended owing to lack of staff.

HYDRAULIC EXPERIMENT STATION.

Many of the problems associated with the investigation and design of water conservation works can be adequately solved only by carrying out investigations by means of hydraulic models of the works under consideration. This method of investigation is standard practice for all major hydraulic works, and in view of the Commission's programme, investigations are being made of possible sites for such a station.

Several sites have been examined, but owing to the loss of the officer engaged on this work, it has had to be suspended. As these investigations are essential for the preparation of final designs of spillways, outlets, control works, and other features of the Eildon and other major projects, it is imperative that this work be recommenced as soon as possible.

MEASUREMENT OF WATER.

The standard Dethridge meter has been redesigned to provide for construction in steel instead of timber and steel.

A special meter for measuring small irrigation supplies has been designed and a model has been made for laboratory and field testing.

MURRAY AND MAJOR WORKS DIVISION.

Major Works.

Reservoirs.

Although the Hume Reservoir was practically emptied in May, 1945, when it contained only 10,000 acre feet, it was completely filled by November, 1945, the highest level recorded being 1 foot $8\frac{1}{2}$ inches above the spillway.

Necessary maintenace was carried out on the Hume Reservoir, the Yarrawonga Weir, the Torrumbarry Weir and Lock, the Mildura Weir and Lock, the Laanecoorie Reservoir, Glenmaggie Reservoir, Eildon Reservoir, Goulburn Weir, Waranga Reservoir and Malmsbury Reservoir. Tenders for steel flood gates to increase the storage capacity of the Lauriston Reservoir from 12,000 acre feet to 16,000 acre feet were accepted in June, 1946, the amount of the tender being £19,789. It is expected that the work will be completed within twelve months.

NEW WORKS.

ROCKLANDS RESERVOIR.

Prior to suspension of works on the 28th February, 1942, progress with the construction of the Rocklands Dam on the Glenelg River near Balmoral, had been limited to preliminary works, including provision of camp facilities, staff housing, workshops, and access road. As the buildings and engineering services then installed were suitable for immediate use, the Royal Australian Air Force occupied the camp for training purposes and did not vacate the area until November, 1944.

Work was resumed by the Commission in January, 1946, and 150 men were employed at the end of June. During the period, the construction of the coffer dams in the river was commenced, and it is expected that these will be completed and the foundations in the bed of the river exposed by the end of 1946.

Excavation of the foundations of the dam, outside the river channel and for the offtake channel in the vicinity of the dam, has commenced, and a quarry for the supply of stone for concrete aggregate has been opened up.

Further buildings for camp and works requirements have been erected, special attention having been given to the provision of housing for married employees. For this purpose, a type of demountable house built up of prefabricated cement-asbestos panels, has been developed. It is proposed to erect 80 of these houses at Rocklands and contracts for the supply of panels have been let and deliveries of materials commenced.

Difficulties in obtaining essential supplies of materials, plant, and equipment have considerably restricted progress, while floods during March and rainfall above the average later in the year, retarded the delivery of sand and timber supplies from local sources.

MURRAY VALLEY CHANNEL CONSTRUCTION WORKS.

Channel construction work continued during the year in the Murray Valley district, and the work included the reticulation of the Parishes of Baulkamaugh, the eastern half of Waaia, and the southern portion of Ulupna. All the structures on channels in the Strathmerton area have been completed on No. 2 system.

During the year, water was made available to an additional 9,000 acres in the Murray Valley district. A large camp has been established near Numurkah for the accommodation of men employed on the works.

The average number of men employed during the year was 135, including 20 on earthwork contracts. Approximately 356 miles of main and spur channel earthwork, involving the excavation of nearly 6,200,000 cubic yards of earth have now been completed.

Of the total length of channelling, some 225 miles now have the necessary structures installed and these channels are in operation.

CAIRN CURRAN.

It has not been possible to start actual construction work at Cairn Curran Reservoir site, but, several staff appointments have been made and work is proceeding on the construction planning.

Some materials for camp constructon have been obtained, and it is hoped that the preparation of the camp will be well advanced by the end of 1946 and workshop and other facilities established.

EARTH MOVING PLANT.

CENTRAL DEPOT.

In order to provide adequate facilities for the servicing and maintenance of the large amount of mechanical plant which the Commission is acquiring for the carrying out of its works, arrangements have been made for the establishment of a Central Plant Depot, at Kangaroo Flat, near Bendigo. An area of 10 acres of Crown lands, conveniently situated to road and rail transport, electric power and water supply has been obtained for this purpose. Construction work at the Depot has already been commenced and temporary buildings erected to enable plant to be prepared for use. Since the end of the war every opportunity has been taken by the Commission to acquire suitable plant and equipment for the Commission's postwar works. The value of plant already acquired is £118,000.

HIRING OF MECHANICAL EQUIPMENT TO WATER USERS.

There is now a wider realization among irrigators of the value of mechanical plant for the cleaning of private channels, the construction of drainage ditches, and the excavating of tanks for domestic and stock requirements, and the Commission has been in a position to meet portion of the demand for the hiring of mechanical equipment for these purposes. The result of the work carried out in this way will become evident during the coming irrigation season by the speeding up of water deliveries to irrigators who were able to avail themselves of the use of this plant.

TOWN WATER SUPPLIES.

COLIBAN SYSTEM.

Owing to the low rainfall in the catchment area during the first half of the year 1945, the Coliban storages comprising the Upper Coliban, Lauriston, Malmsbury, and Spring Gully Reservoirs, with a total capacity of 54,000 acre feet, but which had not been filled to overflow level since October 1942, contained only 8,000 acre feet of water at the 1st July, 1945. As a result, however, of the good rains falling in the next few months the storage 10106/46.—3

increased to 26,000 acre feet by 1st October. The quantity stored was not sufficient to enable full supplies of water to be given for irrigation, and in order to safeguard the domestic supplies for the important towns in the Coliban area, it was necessary to introduce restrictions on the use of water for irrigation on the same basis as those which were in operation the previous year, when the supply was limited to a little more than one-third of normal irrigation requirements.

The prolonged drought conditions broke early in the year 1946, and were followed by beneficial rains which together with the restricted supply that was made available from the storages, were largely responsible for the satisfactory season experienced by the orchardists and tomato growers in the district.

During the year, many necessary improvements have been carried out to the reticulations of Bendigo and some of the smaller towns. These included the replacement of some 385 chains of old cast and galvanized iron mains of sizes varying from 6 to $1\frac{1}{2}$ inches by asbestos cement pipes of greater carrying capacity and of diameters not smaller than 3 inches. A new 6-inch fibrolite main has been laid from the service basin at Marong to the township, a distance of 64 chains, replacing a 5-inch wood main that had reached the end of its useful life.

An important work that is about to begin is that to improve the supply to the south-eastern portion of Bendigo by laying a new 12-inch cement-lined steel main 162 chains long from the 27-inch high pressure main at the corner of High and Myrtle streets to Neil-street, together with 59 chains of 9 inch and 20 chains of 6 inch mains. This work will not only meet present requirements, but will provide for future expansion in this locality.

To satisfy the demand for water occasioned by the activity displayed in house building in Bendigo early this year, extensions totalling a length of 35 chains were undertaken.

Concrete lining of channels which had practically ceased during the war was resumed this year, when £40,000 was made available for this work. Since the work began, 2 miles 65 chains of main and branch channels have been completed. The total length of main channel now lined is 18 miles 31½ chains, and that of branch channels 30 miles 74 chains. A number of old timber bridges and culverts have also been renewed in reinforced concrete.

The work of replacing the Muckleford portion of the Maldon supply main was commenced towards the end of the year. This main was laid over thirty years ago. It is being replaced by a 10-inch diameter cement-lined steel pipe.

The number of water meters installed during the year was 498. The total now in operation is 5,328, which represents 44 per cent. of the total water services.

NEWSTEAD.

Sufficient water to meet all requirements was available throughout the year from the storage reservoir, which is filled from the Jim Crow Creek.

BELLARINE PENINSULA.

The work of replacing 24 of the pipe culverts on the Wurdee Boluc outlet channel with new 5 feet x 4 feet concrete culverts will be completed in time for use during the coming summer. This work will increase the capacity of the channel from 7 to 14 cusecs.

The replacement of 287 chains of 9 inches diameter spiral steel cement-lined main from the Bellarine Basin to the Queenscliff Service Basins with a 12-inch diameter main is well in hand some 40 chains having been laid, and it is anticipated that the 12-inch main will be in operation during the next season.

WINCHELSEA.

The townspeople of Winchelsea, where water supply is provided by a local Trust, have for some time been pressing for an improved water supply system to be obtained by gravitation from the Commission's Wurdee Boluc Reservoir, some 5 miles distant from the town. The necessary works have been completed by the Trust and this system is now in operation, the outlet pipe at the western end of the Reservoir having been tapped and the new supply made available to the township by means of a fibrolite main.

This system replaces the previous unsatisfactory supply for the town obtained by neans of pumping from the adjacent Barwon River.

BIRREGURRA.

The residents of Birregurra have requested a supply of water for the township from the Bellarine System, and a scheme estimated to cost £18,900, including £2,400 for headworks was prepared by the Commission under the Town Water Supplies Committee's formula. The assistance to be provided by the State in respect to this Scheme is in the vicinity of £8,600, which will enable the rate to be reduced to 2s. 4d. in the £ as in the other towns served from the Bellarine System.

The townspeople having indicated their acceptance of the proposal, an urban district has now been proclaimed and the construction of the inlet channel from the Main Wurdee Boluc Reservoir to the storage reservoir has been commenced.

In addition a contract for the construction of a twin earthen storage reservoir with a capacity of 17 million gallons on high land overlooking the township has been let. It is hoped that, if the necessary materials can be obtained, water will be available to the Birregurra township during the coming summer.

Wonthaggi.

The water supply to the townships of Wonthaggi, North Wonthaggi, and Hicksborough, and to the State Coal Mine has been satisfactorily maintained, and during the year North Wonthaggi and Hicksborough were combined with Wonthaggi in one Urban district. This brings about uniformity of rating through the area.

OTWAY WATERWORKS DISTRICT.

The total rainfall during the year in the catchment at Arkins Creek, Wyelangta, was 95 inches, 34 inches greater than the previous year.

To meet the growing demand for water by the City of Warrnambool, and to permit of a supply to Dennington, the Commission decided to construct an auxiliary storage reservoir and instal a booster pump on the eastern outskirts of the City.

The supply of water to the City of Warrnambool for the year was 265,310,000 gallons, an increase of 1,738,000 over the previous year. Supplies to Camperdown, Terang, and Cobden have been satisfactory.

NOORAT AND GLENORMISTON.

A proposal to supply the townships and rural areas of Noorat and Glenormiston was accepted by the residents.

The factories of Trufood of Australia Ltd., and the Glenormiston Butter and Cheese Co., which will be large consumers, will also be included in the scheme.

The supply will tap the Otway main pipe line about one mile east of the Terang township. Some 6 miles of 12-inch diameter and 15 miles of 9-inch, 8-inch, 6-inch, and 4-inch diameter pipes will be laid. A reinforced concrete service basin of one million gallons will be constructed on the high land at Noorat.

During the summer months, the supply will be by gravitation from the Mount Ewan Reservoir, but when the Tank Hill Reservoir, which supplies the City of Warrnambool and the township of Allansford is being filled in the winter, it will be necessary, in order to maintain a pressure sufficient to satisfactorily supply the high lands beyond Noorat, to augment the supply by pumping. For this purpose, an automatic electric booster pump will be installed near Noorat.

MORNINGTON PENINSULA.

Lysterfield Reservoir.

The Commission is now preparing a scheme of afforestation for the 3,000 acres of catchment area of the Lysterfield Reservoir recently resumed by the Commission.

The continued dry conditions which existed throughout Victoria during the year were reflected in the reduced flows that occurred in the Bunyip River at the offtake of the Bunyip Main Race.

The flow in the Race required to meet maximum demands is 9 cusecs, but during portion of the months of December and January, although the full flow of the river was taken, the flow in the Race was reduced to less than 6 cusecs. However, it was unnecessary for the Commission to impose restrictions on the use of water as consumers responded voluntarily to requests to economise in the use of water during the periods of shortages.

A comprehensive investigation into the water supply position to the whole of the Mornington Peninsula System is now nearing completion.

To provide for continued expansion throughout the district, investigations are being made of a project to obtain additional water for the Mornington Peninsula System from the Tarago River, where ample supplies are available.

Improvements were effected during the year to the Bittern Reservoir, from which the Dromana–Portsea section of the system was completed.

The laying of a new 21-inch diameter reinforced concrete main from the Frankston Reservoir is completed and operating successfully. This main will materially improve the supply to the Frankston-Carrum districts. It is intended to instal in this pipe line an electrically operated Venturi meter with automatic bypass. This meter will record accurately flows varying from 3,000 to 400,000 gallons per hour, and provide very useful data for the design of future improvements. In order to improve the supply of water to the Chelsea-Carrum areas, approval has been given to a comprehensive scheme of pipe enlargements and replacements.

This work will involve the laying of nearly 3 miles of 12-inch diameter mains from the neighbourhood of Birdwood-street, Aspendale, to Bondi-road, Bonbeach, and the laying of approximately 5 miles of 6-inch and 4-inch diameter mains to replace existing small mains in many other streets in the district. This work will be carried out as soon as materials become available.

The new 24-inch diameter reinforced concrete main which was laid from Gladstone-road to the Dandenong Reservoir was completed and is operating successfully, and the Commission intends to proceed as early as possible with improvements to the reticulation system in Dandenong itself.

Tenders have been invited for the laying of a new 18-inch diameter main in Gladstone-road northerly for 70 chains, and a 12-inch diameter main in Heatherton-road from Gladstone-road to Cleeland-street, thence along Cleeland-street to the centre of the township at Prince's Highway.

The quantity of water delivered for market garden purposes from the Lysterfield Reservoir for the year was 115,955,000 gallons.

WATERWORKS TRUSTS AND LOCAL GOVERNING BODIES.

There are now 133 local water authorities—117 Waterworks Trusts and 16 Local Governing Bodies—which, under the general supervision of the Commission, supply water for domestic and industrial purposes in country towns.

During the year under review, three new Waterworks Trusts, the Shire of Ararat Waterworks Trust, the Kiewa Waterworks Trust, and the Mirboo North Waterworks Trust, were constituted to construct and manage town water supplies at Willaura, Kiewa-Tangambalanga and Mirboo North respectively.

The supply of water for Lilydale is obtained from the Melbourne and Metropolitan Board of Works under a special agreement, and as the Lilydale Shire Council agreed to assume full responsibility for local administration, the Lilydale Waterworks Trust was abolished.

The persistence of drought conditions necessitated the continuation of restrictions on the use of water in many towns until the late summer months, when good rains brought relief.

Following the end of the war many more local water authorities are preparing to take advantage of the Town Water Supplies Committee formula for Government financial assistance towards the cost of water supply works. Numerous proposals for new supplies and extensive improvements to existing supplies received the Commission's approval, but the progress achieved in construction of works has been severely restricted owing to the shortage of labour and materials, particularly piping.

The Ballarat Water Commissioners commenced preliminary construction work at the site of a new storage of 3,000 million gallons capacity. This major project, which was approved during the year, will more than double the supply available to Ballarat in dry years.

The Broadford Waterworks Trust commenced construction of an enlarged reservoir to provide an adequate supply during the summer months.

The Devenish Waterworks Trust constructed a new storage which will obviate the necessity of enforcing restrictions in dry seasons.

The Geelong Waterworks and Sewerage Trust is laying a new 24-inch main, together with subsidiary mains to enable that portion of the city's supply, which is obtained from the Commission's Bellarine Peninsula System to be substantially increased.

The Kilmore Waterworks Trust laid new pipe mains and constructed a large storage basin to utilize the stream flow from a greatly enlarged catchment area. These works, together with proposed further improvements to the main pipe line, are designed to overcome acute shortages of water in dry years.

The Macedon Waterworks Trust has commenced construction of a new earthen storage to provide an augmented summer supply to its Waterworks District.

The Maryborough Waterworks Trust installed a borehole pumping plant at Carisbrook, and rising main to augment the existing supply in dry seasons.

The Rutherglen Waterworks Trust constructed a concrete-lined storage basin as the first stage of a re-organization of its supply system. A re-organization, which includes re-locating the pumping plant at a more favorable site on the Murray River.

The St. Arnaud Borough Waterworks Trust continued the construction of the storage basin, pumping plant, and rising main to obtain a supply by pumping from the volcano storage filled from the Commission's Charlton Channel.

The Warragul Waterworks Trust commenced the enlargement of its main pipe line to meet the increasing demand for water in the town.

The Winchelsea Waterworks Trust installed a main pipe line, which provides the town with an improved supply by gravitation from the Commission's Wurdee Boluc Reservoir in lieu of the former pumped supply from the Barwon River.

Pipe extensions and other works were carried out for 20 towns—Ararat, Benalla, Colac, Echuca, Hamilton, Heathcote, Koo-wee-rup, Mildura, Mooroopna, Morwell, Nhill, Port Fairy, Portland, Rochester, Seymour, Swan Hill, Wangaratta, Warburton, Warrnambool, and Woodend, while 25 Trusts made investigations into the question of substantial improvements to their works. In many of these cases, detailed plans were completed and tenders let for the supply of piping.

The installation of new town water supplies was approved at Bruthen, Cowangie, Lara, Penshurst, and Tooborac. Six townships in the northern part of the Colac Shire—Alvie, Beeac, Coragulac, Cororooke, Cressy, and Warrion—were supplied by enlargement and extension of the Colac supply.

SEWERAGE.

There are now 40 Sewerage Authorities in country centres, and in 27 of these centres sewerage systems are in operation.

Sewerage construction in Victoria was suspended in March, 1942, at the direction of the Commonwealth Government to conserve materials and labour for the war effort. Although many of the materials used in sewerage systems and house connexions are now urgently required for housing projects, it has already been possible to re-commence some of the works interrupted in 1942. The installation of house connexions has been resumed at Kyneton, Dimboola, and Nhill, where the main sewerage systems were in operation, and a large proportion of the houses had been connected to the sewers when works were suspended.

At Kyabram, Mornington, and Portland, where the main systems are also in partial operation, and at Leongatha, Maffra, Traralgon, and Yarrawonga, where the schemes are partially completed but not operating, the resumption of construction work has not yet been found practicable. Plans have been prepared, but work has not commenced at seven other centres at Beechworth, Euroa, Lorne, Sale, Werribee, Wodonga, and Yarram.

Minor sewer extensions to serve Housing Commission building projects and newly-established country factories, and essential replacement works were undertaken at Ararat, Bairnsdale, Benalla, Dandenong, Geelong, Hamilton, Kerang, Portland, Wangaratta, Warragul, and Warrnambool.

As the result of the adoption of a new scale of Government financial assistance towards the capital cost of country sewerage schemes, in addition to existing State assistance in meeting all interest charges in excess of 3 per centum on loans raised to meet the Sewerage Authority's share of the capital cost, sewerage schemes have now become financially practicable in a large number of towns.

During the year, revised proposals for sewerage schemes at Charlton, Maryborough, Mooroopna, and Tatura were approved. The Charlton Sewerage Authority and the Maryborough Sewerage Authority were constituted and are now carrying out the detailed surveys of their respective sewerage Districts.

A sewerage scheme for the Borough of Queenscliff, which embraces the towns of Queenscliff and Point Lonsdale, has also been approved, and several other schemes have been submitted for examination.

DRAINAGE AND FLOOD PROTECTION WORKS.

Koo-wee-rup and Cardinia Districts.

In the Yallock area of the Koo-wee-rup District, Scanlan's Drain and the No. 4 Drain have been deepened and remodelled for a combined distance of 4 miles.

The work of lowering sections of the No. 7 Embankment as a precautionary measure against excessive heading up of flood waters has been completed along a length of $3\frac{1}{6}$ miles from the No. 4 Drain.

The south-east Embankment of the Main Canal has been raised and regraded for a distance of 3 miles below Cora Lynn. The work of loaming and grassing this section of the bank is now in progress.

Privately-owned suction plants, operating under an arrangement with the Commission, have removed 28,400 tons of coarse clean sand from the Koo-wee-rup Main Canal during the year. The total output of sand from this source is approximately 577,400 tons over the period 1925 to 1946.

CARRUM DISTRICT.

Owing to the continued scarcity of labour, maintenance work in the Carrum District has been confined to the carrying out of necessary repairs to structures, and to some cleaning out of supply channels to meet the needs of stock watering during the dry period of the year.

MURRAY LEVEES.

No application for permission to erect levees along the River Murray or adjacent streams has been received during the year by the Interstate Committee appointed for the purpose.

The Water (Levee Banks) Act No. 5117 passed by Parliament in May, to which reference is made elsewhere in this report, provides for greater control of levee bank construction within any area in Victoria which may from time to time be proclaimed by the Governor in Council.

Consideration is now being given to the question of areas adjacent to the River Murray which should be proclaimed under the Act.

RIVER IMPROVEMENT, CONTROL, AND GAUGINGS.

FLOODS.

In the early months of 1946, meteorological conditions produced unusually widespread and heavy rains in sub-tropical Australia. Very heavy flood rains were experienced in the Lorne area about 18th February, and in the Central and North Central districts at the end of that month.

In the latter half of March, the Western District received falls which caused the worst floods known in the south-western corner of the State since white occupation. The conditions which produced these floods were very similar to those responsible for the flood rains of 1934, i.e., an almost stationary cold front and cyclonic system being fed with very moist, warm upper air. Streams rose to extraordinary levels—the Glenelg at Dartmoor was 60 feet above normal—and traffic and production were halted for some days. Several persons were drowned in the McArthur area. Thousands of sheep were lost, railway washaways and stoppages occurred at various points, and road traffic was badly disorganized. Total applications to the Flood Relief Committee amounted to about £147,000.

CATCHMENT CONTROL.

The organization for the control of grazing on the Upper Kiewa River Catchment was brought into operation during the year by the Soil Conservation Board. Two Committees, an Advisory Committee, on which the Commission is represented, and a

Cattleman's Committee were appointed for this purpose. The Advisory Committee inspected the Bogong High Plains, and adjoining country at the end of the grazing season and recommended the number of cattle to be grazed on the area for the coming season and the date of their entry. The Cattlemen's Committee has the duty of deciding the number of stock to be sent up to the Plains by each grazier, and of policing the conditions of the licences.

Experimental work on the Teddington Catchment has been continued. Some interesting results are being obtained which will be dealt with later in a special report.

RIVERS AND STREAMS FUND.

There was no noticeable increase early in the year under review in the number of applications for assistance from the Rivers and Streams Fund for river improvement works. This position was a reflection of the slow return to normal conditions, and also of the fact that no major flooding had occurred on streams for three or four years prior to March this year. Following on the Western District floods, however, extensive river snagging was commenced by the Warrnambool Shire Council on the Merri River, near Warrnambool. Towards the end of the year, there was a definite increase in the number of enquiries regarding grants and requests for inspections. It is expected that as a result of the wetter season and higher rivers, this activity will continue to increase.

Twenty-five grants amounting to £4,243 in all were allotted from the Rivers and Streams Fund to municipalities and other authorities, bringing the total number of grants at 30th June, 1946 to 746 and the amount allotted to £108,758. The revenue received into the fund during the year amounted to £10,315. The credit balance available for allocation at 30th June, 1946, was £43,449.

Attention is drawn to the recommendation of the Parliamentary Public Works Committee that control of this fund should be transferred to the Minister of Water Supply or the State Rivers and Water Supply Commission, which should then be made responsible for river maintenance.

RIVER GAUGINGS.

As provided by Section 32 of the Water Act 1928, the gauging and recording of flows of the principal streams of the State were continued. Weekly returns showing the volumes of water stored in reservoirs have been compiled and published in the Press.

With few exceptions, stream flows were again below average for the year 1945–46. However, the drought conditions of the previous two years were terminated generally by better than average rainfall at the end of 1945 and early 1946, and run-off was above average for the first four months of 1946. Flows for May and June again fell considerably below average, except in Gippsland, where they approximated to normal. The volumes of water held in the Commission's storages at the end of June were generally satisfactory.

The following table shows the discharge of some of the principal streams during the year 1945–46, also the average annual discharge and the percentage departure from the average:—

Stream.			Discharge for Year 1945-46.	Average Annual Discharge since Year Indicated.	Percentage Departure from the Average for the Year 1945-46.
			Acre Feet.	Acre Feet.	
River Murray at Jingellic Mitta River at Tallandoon Ovens River at Wangaratta Broken River at Goorambat Goulburn River at Eildon Weir Goulburn River at Murchison Coliban River at Malmsbury Loddon River at Laanecoorie Little Wimmera River at Lake L Lerderderg River at Darley Bunyip River at Bunyip	onsdale	Reservoir	 1,355,900 705,600 752,320 62,920 1,073,180 1,560,480 73,560 72,060 81,310 10,250 81,980	1,826,000 (1891) 1,094,000 (1887) 1,146,000 (1887) 203,500 (1887) 1,373,000 (1901) 2,261,000 (1882) 50,920 (1890) 166,900 (1891) 69,700 (1904) 28,710 (1908) 120,900 (1908)	$egin{array}{cccccccccccccccccccccccccccccccccccc$

Eighteen new gauging stations were established. These are set out in the following table:—

Acheron River at Taggerty
Bruthen Creek at Woodside
Campaspe River at Axedale
Campaspe River at Elmore
Hughes Creek at Avenel
King Parrot Creek at Strath Creek
Leigh River at Grenville
Leigh River at Inverleigh
Moorarbool River at Batesford

Moorarbool River at Morrison's
Murrindindi Creek at Murrindindi
Seven Creeks at Euroa
Sunday Creek at Tallarook
Tarra River at Yarram
Toolern Creek at Melton
Yackandandah Creek at Allan's Flat
Yea River at Yea
Wimmera River at Glynwylln

Nine automatic water level recorders were installed during the year, bringing the total now in operation to 31, while 193 stream gauging measurements were carried out.

The number of stations in operation at 30th June, 1946, was 103.

PRIVATE WATER USERS.

The use of waters in rivers, creeks, streams, water-courses, lakes, lagoons, swamps, and marshes has been strictly controlled by the Commission.

As a result of the drought conditions which continued from the previous year into the early portion of the season under review, the natural flow in many streams throughout the State still remained unusually low, and as in previous drought years, it was found necessary to place restrictions on the use of water for irrigation in order to conserve sufficient water for domestic and stock requirements.

On several main streams, where demands for irrigation exceeded the volume of water available the constitution of additional Advisory Committees proved of great benefit both to the Commission and the landholders. At the 30th June, 1946, eight of these Advisory Committees were in operation.

Licences and permits in force at the 30th June, 1946, comprise 285 Diversion Licences for periods up to 15 years, authorizing the irrigation of 15,522 acres, and 2,302 Annual Permits for the irrigation of 23,221 acres, making a total of 2,587 licences and permits issued under Section 188 of the Water Acts compared with 2,012 for the previous year.

Details of licences and permits in operation during the year are set out below:--

		Viney	vards.		Market			
_	Industrial.	Dried Fruits.	Table and Spirit.	Orchards.	Gardens.	Tobacco.	Miscellaneous.	Total.
Licences— Number in force	4	9	5		2	67		285
Area authorized to be irrigated (acres)		193	733	1,598	94	52	12,852	15,522
Permits— Number in force		22	10	23	280	23	1,944	2,302
Area authorized to be irrigated (acres)		531	229	576	1,484	262	20,139	23,221
Total area authorized to be irrigated (acres)		724	962	2,174	1,578	314	32,991	38,743

Thirty-three additional applications were lodged during the year under review, for Diversion Licences under Section 188 of the *Water Act* 1928, to divert water for irrigation purposes for a period of fifteen years, making a total of 360 received to the 30th June, 1946.

During the year under review, 39 licences were granted by the Governor in Council for periods of fifteen years. No licences are so far in force to divert for irrigation purposes other than from the River Murray System.

In eighteen instances, transfers were effected following the sale of properties for which licences had been issued. In all cases, these transfers were in respect of the Torrumbarry System.

In eleven instances, owing to variations required by licensees, it was found necessary under Regulations and upon the request of individual holders to revoke licences in operation and issue new ones in their stead.

FARM WATER SUPPLIES BRANCH.

The Farm Water Supplies Advances Act 1944, No. 5020, which came into operation on the 1st January, 1945, is designed to give farmers an opportunity of establishing or improving existing domestic and stock water supplies on their farms.

Under the Act, advances are made by the Board of Land and Works in approved cases to farmers who cannot finance works to supply water to their farms. Applications which have been approved have included boring for underground water, construction of catchment or gully dams, diversion from streams or channels, and the installation of windmills or other pumping plant. Water supplies for the domestic requirements of the farm residence and for a house garden come within the provisions of the Act.

The amount of advance made to any farmer shall not exceed seven-eighths of the estimated cost of the work, which must be approved by the State Rivers and Water Supply Commission.

In order to carry out its part of the policy laid down under the Farm Water Supplies Act, the Commission has now set up a Farm Water Supplies Branch, which has been placed under the control of a Senior Engineer experienced in carrying out rural water supply works. In addition to dealing with applications for advances under the Act, the Branch is available to give advice to farmers on matters relating to the supply of water to their holdings even if finance is not required.

Since the coming into operation of this legislation, 60 applications have been dealt with and advice and information have been given in 300 cases. The Commission is now preparing for distribution a handbook on "Farm Water Supplies for Domestic and Stock Purposes" which will cover most aspects of the supply, storage and distribution of water for farm purposes.

UNDERGROUND WATER RESOURCES.

The comprehensive survey of the underground water resources of Victoria is proceeding, and it is expected that the first progress report will be available toward the end of the year. This report will include all easily available records of bores in the Mallee, Wimmera, and Glenelg Regions and a detailed description of the Murray Artesian Basin.

Investigations have also been made into the underground water resources of local areas such as the Orbost Flats, Llowalong Estate on the Avon River, and also at Bacchus Marsh, where four 10-inch diameter and seven smaller observation bores have been put down by contract for the Commission. Detailed reports of these surveys will be included with the more general reports.

Two experimental bores have been put down near Dimboola, from one of which irrigation is being carried out. Although the yield from this bore is only 4,500 gallons per hour, valuable data should be obtained regarding the practicability of irrigation with underground water in this district.

ENGINEERING AND RESEARCH BRANCH.

The work of this Branch is still steadily increasing. The following is a summary of the work under the various sections:—

- (1) Routine Laboratory Tests for Commission and other Authorities.
- (2) (a) Outdoor Testing of Materials.
 - (b) Inspection of Materials supplied by Contractors.
- (3) Chemical and Physical Examination of Materials for Works.
- (4) Water Purification and Analysis.
- (5) Soil Mechanics.

Some 9,447 tons of normal Portland Cement were tested for the Commission and other authorities and 790 specimens of concrete. Owing to the scarcity of construction material, the outdoor testing of materials was somewhat restricted, but the main items tested were 60,000 feet of asbestos cement pipes, 32,000 feet concrete pipe, and 4,000 feet steel cement lined pipe.

Inspection of materials supplied by contractors included gibault joints, pipe fittings, valve and fire plug covers, tapping saddles, steel formworks for concrete culverts, timber of different kinds, mainly hardwood and oregon.

Various samples of stone, gravel, and sand from Murray Valley, Seymour, Bendigo, and other localities was examined together with a wide variety of water samples. During the year a record number of 1,075 soil samples were received but the continuation of the work on samples from the site of the proposed enlargement of the Eildon Reservoir has formed the larger portion of the investigations of soil samples.

A number of disturbed and undisturbed soil samples were despatched to the Bureau of Reclamation, U.S.A., concurrently with the visit of two of the Commission's engineers to that country in connexion with the Eildon Reservoir investigations.

The Commission is pleased to record assistance given to two other Authorities in the initiation of Soil Testing Laboratories by giving their representatives full facilities to familiarize themselves with the methods of testing and apparatus employed in the Commission's Laboratory.

A handbook on "Methods of Testing Soils" is in course of publication.

SOIL CONSERVATION.

The Commission, on behalf of the Soil Conservation Board, carried out the construction of a Soil Conservation project at Barrakee, involving the formation of contour banks, specially prepared waterways, and other works.

LAND VALUATIONS.

VALUATIONS FOR RATING.

New valuations for rating in the districts administered from the Shepparton Centre have been completed. In view of the provisions of the Water Act 1939, No. 4678, which provide for rating on either basis, these include both unimproved capital values and net annual valuations of all properties. Arrangements are in hand for proceeding with rating valuations in the remainder of the Commission's rural districts.

During the year ninety-nine supplementary valuations were made comprising 536 assessments, a total net Annual Value of £35,945 and an area of 87,358 acres.

VALUATIONS FOR LAND COMPENSATION.

Ten claims for compensation for land required for works have been settled. The total amount claimed was £13,452 and settlements were effected for £10,573.

LIBRARY.

During the year the Commission's reference Library has been established as a separate unit at Head Office, and accommodation and facilities have been provided for study and research. This has enabled the library to be used by the Commission's staff to a greater extent than in previous years. There have also been a considerable number of inquiries from the general public, mainly with regard to the Commission's publications which the library now houses and distributes.

One hundred and forty periodicals of a technical character are now received from Australia and Overseas, and are circulated amongst the staff. Articles dealing with water supply and related problems are abstracted and published in the Library Bulletin. During the year, there were eleven issues of this publication which noted 403 accessions of books and reports and 587 articles of special interest.

Loans of the Commission's books and publications for the year amounted to 1,480, and 15,000 of its publications were distributed to water users and others interested in water supply.

PART IV.—RATING AND FINANCE.

VALUATIONS, RATES, IRRIGATION CHARGES, AND FLOOD PROTECTION CHARGES.

The statements which follow set forth the Districts supplied by the Commission with water for domestic and ordinary use and for watering cattle or other stock, together with the annual value of the lands and tenements, the number of assessments, and the general rates, compulsory irrigation charges, flood protection rates and charges, and drainage rates made in all Districts. An estimate of the number of persons dwelling in such Districts is also appended.

The provisions of section 62 of the Water Act 1928, as amended by the Water Act 1944, whereby lands in certain Rural Districts which could not be supplied with water were exempted from rating, were applied to all Irrigation and Water Supply Districts and Waterworks Districts.

In accordance with the before mentioned section of the Water Act 1928, lands in Irrigation and Water Supply Districts, Waterworks Districts, and Flood Protection and Drainage Districts were arranged in not more than four divisions, regard being given in such arrangement to the relative extent of the benefits derived by such lands from the constructed service works. The rates made and levied were in accord with the graduated scale for lands rated in divisions.

A minimum and tapering rate in the urban portion of the Coliban System and a rate on the unimproved capital value of lands within the Carrum Drainage District, with a fixed minimum amount of rate in the latter District as provided by section 5 of the Water Act 1928 were made as in previous years.

The Commission fixed minimum annual rates on lands arranged in the first division in twenty Waterworks Districts.

In twenty-six Irrigation and Water Supply Districts the Commission made and levied compulsory irrigation charges and in three Flood Protection Districts charges were made.

Details of all rates and charges made are set out hereunder:—

MISCELLANEOUS WATER CHARGES.

For Irrigation Supplies from the Commission's channels to lands outside constituted Irrigation and Water Supply Districts, the charge for water is 50 per cent. above the compulsory charge ruling in the nearest Irrigation and Water Supply District, excepting supplies to such lands as arc within constituted Waterworks Districts and subject to the general Domestic and Stock rate, for which the charge is the equivalent of the irrigation charge ruling in the nearest Irrigation and Water Supply District.

For Irrigation Supplies to lands in the Western Wimmera and Wimmera United Waterworks Districts the charge for water is 12s. per acre foot with a minimum annual payment of £2 for any one holding.

For Domestic and Stock Supplies from the Commission's pipe lines to properties outside proclaimed Urban Districts the charges are in accordance with the Commission's By-law No. 3875 or by special agreement, and are as follow:—

Name	of Waterw	Amount of Charge per 1,000 Gallons for Water Supplied.	Minimum Charge per Annum.		
				s. d.	s. d.
BELLARINE PENINSULA		 	 	1 0	50 0
MORNINGTON PENINSULA			 	1 0	50 0

FINANCE.

(W. Lambert, B.Com., D.P.A., A.F.I.A., Chief Finance Officer.)

REVENUE.

The respective amounts paid to consolidated revenue during the past three years were:—

	Year.		Water Rates and Charges, Diversion, Grazing Fees, &c.	Interest on Lands Sold, Plant and Machinery Account.	Recoups, &c.	Total.
			£	£	£	£
1943–44		 	737,259	4,433	55,608	797,300
194 4–4 5		 	714,708	2,339	73, 980	791,027
1945-46		 	685,924	2,593	87,499	776,016
	Grand Totals	 	2,137,891	9,365	217,087	2,364,343

The amount collected during the current year, including arrears, represented the equivalent of 132 per cent. of the year's assessment (£518,023) for rates and charges. Additional amounts collectable for sales of water, interest on arrears, &c., were £166,558. The total collectable new money for the year, therefore, was £684,581, of which the actual sum collected (£684,931) represented the equivalent of 100 per cent.

An amount of £17,061 was written off the books of the Commission for the financial year 1945–46, as compared with £22,670 for the previous year. Adjustments of water-users' accounts in arrears in rural areas, made pursuant to legislation, have involved the writing off, during recent years of the following amounts:—

	Amount of Remission to 30th June, 1946.	Number of Individual Cases Involved.					
						£	
Farmers' Debts Adjustment A	ct 1935	(No. 43	26)	 		97,658	1,546
Water Act 1937 (No. 4513)				 		126,044	1,849
Water Act 1940 (No. 4740)				 		81,674	12,000
Water Act 1944 (No. 5017)				 		3,055	(Approx.) 1,666

The amount of £81,674 written off under the provisions of the Water Act (No. 4740), represents the remission of interest accrued on arrears to 30th June, 1940. Arrears of the rates and charges (excluding interest remitted and excused), subject to the provisions of the Water Act (No. 4740) are payable by instalments over periods ranging up to twenty years from and inclusive of 1st January, 1941. The arrears so consolidated are not subject to interest conditionally upon the instalment being paid on the due date each year. The balance of consolidated arrears as at 30th June, 1946, amounted to £228,263.

The loss for the year 1945-46 on Crown lands, which have not been occupied or have been vacated by the lessees leaving no assets, amounted to £5,521.

The arrears of rates and charges were reduced from £468,866 as at 1st July, 1945, to £451,033 as at 30th June, 1946.

EXPENDITURE.

The expenditure for the year on maintenance, water distribution, and management, and the comparative figures for 1944-45 are set out hereunder:—

•	O			1945-46.	1944-45.
				£	£
From A	nnual	Vote Appropriation		 1,070,085	814,729
From A	nnual	Vote Appropriation	(Exceptional)	 *28,466	30,436
		Revenue, Act 4968	-	 11,619	50,178
	-				
				1,110,170	895,343

^{*} Includes £11,180 assistance to Sewerage Authorities; £16,133 subsidies to Sewerage Authorities; £799 subsidies to Waterworks Trusts and Local Governing Bodies; and £354 Cost of Remedial Works to compensate landholders for loss resulting from Commission Works.

The total expenditure on works carried out or supervised by the Commission for the year 1945–46 from all sources was as set out hereunder:—

•	£	£
Vote Funds	1,098,551	
Special Appropriation	3,750	
Surplus Revenue, Act No. 4968	11, 6 19	
		1,113,920

conversion operations during the year, by an amo	ount of	216,660
	.1 0	0.10 F.6.2
The total increase in Loan Liability for the year was	therefore	$649,\!566$

The contribution by the Government of Victoria to the River Murray Commission for the maintenance of works under the River Murray Agreement was £14,150 (included in the expenditure from Annual Vote Appropriation as shown above). The actual expenditure by this Commission on the maintenance of these works was £7,840, and on construction of new works £739.

CAPITAL LIABILITY.

The Capital Loan Liability of the State for Works of Country Water Supply at 30th June, 1946, was £28,911,274, of which amount £26,345,536 is charged to the "Capital Expenditure borne by the State Account". Of the remainder, £1,351,531 is charged to Waterworks Trusts and Local Governing Bodies, £72,598 is debited to the Plant and Machinery Account, and the balance £1,141,609, represents the Capital Liability, after adjustment, debited to Districts and Divisions directly under the control of the Commission. These figures are exclusive of an equity of £2,943,993 in the National Debt Sinking Fund.

In accordance with the provisions of the Water Act 1943 No. 4983, section 5, interest debited direct to water-users on the cost of capital works incurred after the 30th June, 1943, is charged at the rate of 3 per cent. per annum. Interest on the Capital Liability for works of Country Water Supply, incurred prior to that date, is reckoned at the average rate of interest per centum (as determined by the Treasury)

payable by the State of Victoria on securities in respect of Water Supply Loan Liabilities as at the thirtieth day of June in the preceding financial year. The average rates per centum of interest so determined are respectively for 1944–45, £3 13s. 7d. and for 1945–46, £3 10s. 2d.

The amounts debited to Country Water Supply Works on account of interest, exchange on overseas interest and Loan Conversion expenses were:—

			£	s.	d.
Interest	 	 	1,084,099	10	1
Exchange on overseas interest	 • •	 	105,102	5	10
Loan Conversion expenses	 • •	 • •	12,444	5	11
~					
			1,201,646	1	10

The amount paid by the Treasury in respect of exchange on overseas interest has not been debited direct to water-users. The following statement shows the approximate interest payment for 1945–46 in relation to the Capital Liability.

Capital Debited to—	Capital Liability as at 30th June, 1946.	Interest Liability (excluding Exchange and Loan Conversion Expenses).	Interest Paid by Water Users.
Districts and Divisions under the direct control of the Commission	£ 1,141,609	£ s. d. 41,863 15 7	£ s. d. 41,863 15 7

	28,911,274	1,084,099 10 1	94,415 10 0

DEPRECIATION.

The amount at credit of the Water Supply Works Depreciation Account in the Commission's books at 1st July, 1945, was £290,514 18s. 9d. An amount of £48,419 14s. 7d. was raised during the financial year 1945–46 for purposes of depreciation.

In addition, a sum of £1,190 13s. 11d. was paid direct to the credit of the Fund, comprising £390 2s. 6d., being amounts contributed by landholders and other bodies as capitalized maintenance of water supply works constructed for their respective benefits, and £800 11s. 5d., from Loddon United Waterworks Trust Depreciation Account.

After crediting the Account with interest amounting to £6,857 18s. 8d. and deducting the expenditure (£13,961 4s. 8d.) from Depreciation for the year, the balance remaining in the Account as at 30th June, 1946, was £333,022 1s. 3d.

During the year a sum of £48,000 was transferred from the Commission's revenue to the credit of the Water Supply Works Depreciation Fund in the Treasury Books.

It is desirable that the Fund be built up to ensure that moneys will be available to meet large expenditure in replacements which must be effected in the near future, and that regular transfers be made to the Fund to avoid fluctuations in the Commission's net revenue each year. The amount included in rates and charges levied each year for purposes of depreciation is approximately £48,390.

Details of the Water Supply Works Depreciation Account are set out on pages 92-94 of this report.

PLANT AND MACHINERY ACCOUNT AND STORES SUSPENSE ACCOUNT.

The value of large size movable Plant and Machinery, inclusive of depot and workshops at Bendigo, held in the Plant and Machinery Account as at 30th June, 1946, was £72,597 19s. 6d.

Items of plant and machinery controlled in the Plant and Machinery Account are hired to the respective works on which they are engaged at rates sufficient to provide interest and redemption on the capital cost of the plant, a reserve fund for major overhauls and depreciation adequate to renew the plant when it has reached the end of its useful life. The operating account is in credit to the extent of £11,155,

The portion of the hire charge representing depreciation is paid direct to the credit of the Water Supply Plant and Machinery Depreciation Fund, which is kept in the Treasury. The amount at credit of this Fund, which is interest-bearing, was £61,279 19s. 11d., as at 30th June, 1946, as against a credit of £63,080 2s. in the Water Supply Plant and Machinery Account in the Commission's books. The difference represents interest credited to the account in the Commission's books and not yet paid to the Fund by the Treasury.

The value of stores and equipment held in the Stores Suspense Account as at 30th June, 1946, was £198,977 15s. 5d. The net amount charged to the account is £175,708 12s. 7d.; the difference (£23,269 2s. 10d.) represents the amount at credit of operating account in respect of excavators, &c. (£11,155); and the amount at credit of operating account in respect of motor vehicles (£12,114 2s. 10d.).

The net debit for plant and materials held by the Commission as at 30th June, 1946, is £310,811 18s. 3d., and is controlled within funds provided from the following sources:—

•	£	s.	d.	£	s.	d.

REVENUE EXPENDITURE CHARGEABLE TO THE STATE ACCOUNT.

The Commission, by direction of the Governor in Council, has throughout 1945–46 continued the operation of 5 Irrigation Districts, 20 Waterworks Districts, 47 Urban Districts, 6 Urban Divisions, and 13 Drainage Districts, in respect of which Districts and Divisions, the works would not produce sufficient revenue to cover the expenses of maintenance and management. Section 6 of the Water Act 1937 (No. 4513) provides that the annual amount of the loss resulting from the maintenance and management of such works shall be transferred in the books of the Commission to the "Revenue Expenditure chargeable to the State Account". The amount so transferred for 1945–46 was £381,871, making a total of £1,110,514 borne by the State since 1st July, 1938.

In 40 of these districts an aggregate cash surplus of revenue over expenditure of £19,347 was obtained. This amount was applied to Interest (£4,933), Redemption (£38) and Depreciation (£9,409), leaving a sum of £4,968 available to the credit of the respective districts.

The above figures are exclusive of interest due on Capital Liability incurred in respect of works under construction, which has accrued due before the first rate or charge has been made. Such interest charges are, in accordance with the provisions of the Water Act 4513, charged to the "Revenue Expenditure chargeable to the State Account".

FINANCIAL STATEMENTS.

Financial statements in respect of the various Districts and Divisions controlled and supervised by the Commission are set out in the following pages.

FINANCIAL OPERATIONS, 1945-46.

A complete analysis of the Commission's financial operations during the year would involve the division of the Commission's activities into those which might be regarded as "Paying" districts or business undertakings, as "Non-paying" districts or subsidized utilities, and as "National Services" respectively.

Pursuant to the Water Acts 1937 (No. 4513) and 1944 (No. 5017) the Capital Liability of Country Water Supply Works has been adjusted by debiting to water users such amounts of Capital Liability in respect of which interest and redemption could be paid on the basis of existing rates and charges, after providing for operating costs, management, and depreciation. The balance of the Capital Liability, including the Capital Cost of Free Headworks and other National Works, has been transferred to the "Capital Expenditure borne by the State Account".

As the water rates and charges in respect of those Districts and Divisions, the Capital Liability of which has been adjusted, are expected to meet the costs of management and operation in addition to depreciation and interest and redemption on the Capital as adjusted, such districts might be regarded as being within the category of a business undertaking.

"Paying" Districts.

The Districts from which revenue is sufficient to meet all operating, maintenance, depreciation, interest, and redemption charges on allotted capital are:—

Irrigation and Water Supply Districts (23).

Bacchus Marsh	Dingee	Mystic Park	Swan Hill
Boort	Katandra	North Shepparton	Third Lake
Calivil	Kerang	$\operatorname{Rochester}$	Tongala-Stanhope
Campaspe	${f Koondrook}$	Rodney	Tragowel Plains

Berwick		U	

Drainage Districts (1). Carrum

The surplus Revenue over Expenditure in respect of these Districts after providing for interest, redemption, and depreciation was £17,584.

"Non-paying" Districts.

Where the revenue from existing rates and charges is insufficient to meet operating costs, the works in such centres may be maintained by direction of Parliament or the Governor in Council, in which case the loss resulting from their maintenance and management is transferred to the "Revenue Expenditure chargeable to the State Account". The supply to these centres might be regarded as a "utility service" as against a "business undertaking".

Districts which were maintained and operated by direction of the Governor in Council are listed hereunder:—

Irrigation and Water Supply Districts (5).

In districts marked "*" the operations for 1945-46 resulted in an aggregate cash surplus of £19,347. Of this amount, a sum of £14,370 has been applied to depreciation account redemption and interest.

NATIONAL SERVICES.

Included in the heading of "National Services" are such items as River Gaugings and Inspections, Contribution to the River Murray Commission for the Maintenance of River Murray Works, Supervision of Waterworks Trusts and Sewerage Authorities, Administration in respect of expenditure from other funds, &c. In addition, the salaries (provided for under Special Appropriation) paid to the Commissioners of the State Rivers and Water Supply Commission, are debited to the annual cost of operating country water supply works.

No contribution is made to the Commission's revenue to offset the "utility service" and "national services" which the Commission is directed to administer but which are not completely covered by rates or charges.

NET COST TO STATE.

It is indicated on page 103 of the Auditor-General's Report for 1945–46 that the net cost to the State for the year in connexion with country water supply which has been met from general revenue was £1,511,616. This figure includes the cost of the services referred to earlier, also a sum of £10 debited to war precautions. The equivalent figure stated annually is often incorrectly quoted as a "loss" in respect of country water supply, whereas the only amount which, on the existing basis of rates and charges, might be correctly regarded as a cash "loss" is the amount of £381,871, beforementioned, being the deficiency on Districts in which the revenue was insufficient to meet expenses, the operations of which, as already intimated, were continued by direction of the Governor in Council.

A summary of the total cost (£1,511,616) to the State for the year is set out hereunder—a more detailed analysis is set out on page 59 of this Report.

			£	£	£
Total Cost to the State			• •	• •	1,511,616
Loss on "Non-paying" Districts				381,871

			1= 20	1,486,167	
Deduct Surplus on "Paying Distric		••	17,584		
Revenue in excess of operating cos ("Non-paying") Districts	ts in ot	her ••	4,967	22,551	
				1,463,616	
Add amount transferred from Re	evenue t	0			
Depreciation Fund	• •	• •	, .	48,000	
Net Total Cost to State				••	1,511,616

The net cost to the State (£1,511,616) was £279,697 greater than the comparable figure for the previous year. This is due to the high costs of operations, and particularly the unprecedented expenditure of the huge sum of £330,066 incurred in the removal of the enormous accumulations of sand-drift from the channels in the Wimmera–Mallee area consequent upon the extraordinarily severe drought conditions which prevailed until March, 1946. In addition, the restrictions on water consumption, which were imposed by reason of the low state of the storages, reduced considerably the revenue ordinarily received from water sales.

Although provision exists for the transfer from the "Capital Expenditure borne by the State Account" to the direct liability of the water-users as the respective districts develop, it will not be possible, having regard to the present basis of rates and charges and the increased operating costs, for water-users to meet the full cost of interest, redemption, and operations.

Furthermore major water supply projects in hand will involve a large expenditure of capital funds. As the cost of these works will be borne by the State, the interest charges will not be debited to water-users.

It is inevitable, therefore, notwithstanding increasing development, that the cost to the State will tend to increase in future years. The amount (£1,511,616) borne by the community for the year 1945–46 is equivalent to 15s. 4d. per head of the whole population, and represents the contributions of the individual citizen towards the indirect benefits derived from the State enterprise of Country Water Supply.

^{*} Revenue, £38,002, comprises Assessment, £18,965; and Revenue transferred from Irrigation Districts, £19,037.

Group "A".—Districts from which revenue in 1945-46 was sufficient to carry all charges :-

- (1) Irrigation and Water Supply Districts.—Calivil, Campaspe, Coluna, Deakin, Dingee, Katandra, †Kerang, Koondrook †Maffra-Sale, Murray Valley, North Shepparton, Rochester, †Rodney, †South Shepparton, Third Lake, Tongala-Stanhope, †Tragowel Plains.
- (3) Irrigation Urban Divisions.—†Bacchus Marsh, Cohuna, Lockington, †Red Cliffs.
- (5) Waterworks Districts.—Beliarine Peninsula, East Loddon, Mornington Peninsula, Newstead, †Werribee.
- (7) Waterworks Urban Districts.—Allansford, †Antwerp, †Barwon Heads and Ocean Grove, Berriwillock, Berwick, †Brim, †Camperdown. Chelsea-Frankston, †Cobden, Cranbourne, †Culgoa, Dandenong, †Dimboola, Dromana-Portsea, Jeparit, Longwarry, †Marnoo, †Merbien, Minyip, Mornington, †Natimuk, Pakenham, Pyramid Hill, Rainbow, †Rupanyup. Somerville, South Frankston, Spring Vale, †Waterwork, †Carrier, Pittist, Carlinia, Karnoville, Language, Patrick, Carlinia, Karnoville, Language, †Carrier, Politica, Carlinia, Pakenham, Pyramid Hill, Rainbow, †Carrier, Politica, Carlinia, Karnoville, Language, †Carrier, Politica, Participa, Parti
- (9) Flood Protection Districts.—Cardinia, Kanyapella, Lower Kooweerup, Loch Garry.
- (11) Drainage Districts.—Carrum.
- † Districts having an Aggregate Surplus as at 30th June, 1946, from which is met the deficiency arising from 1945-46 transactions.

Group "B".-Districts from which revenue in 1945-46 was insufficient to carry all charges:-

- (2) Irrigation and Water Supply Districts.—Bacchus Marsh, Boort, Fish Point, Merbein, Mystic Park, Nyah, Red Cliffs, Shepparton, Swan Hill, Tresco, Werribee.
- (4) Irrigation Urban Divisions.—Corop, Dingee, Heyfield, Leitchville, Murrabit, Stanhope.
- (6) Waterworks Districts.—Birchip, Carwarp, Carwarp, Central, Coreena, Hindmarsh, Karkarooc, Kerang North-west Lakes, Loddon, Long Lake, Millewa, Millewa Central, Normanville, ‡Otway, Sea Lake, Tyntynder, Tyrrell, Tyrrell West, Upper Western Wimmera, Upper Wimmera United, Walpeup West, Western Wimmera, West Loddon, Wimmera United, Wycheproof, Yelta.
- (8) Waterworks Urban Districts.—Anglesea, Beulah, Birchip, Bittern, Bunyip, Carwarp, Chillingollah, Chinkapook, Crib Point, Dooen, Drysdale, Garfield, Hastings, Hopetour, Jung Jung, Koondrook, Lake Boga, Lalbert, Lascelles, Manangatang, Meringur, Mitiamo, Nandaly, Newstead, Nullawil, Nyah, Nyah West, Ouyen, Patchewollock, Piangil, Partarlington, Quambatook, Queenscliff and Point Lonsdale, Sea Lake, Speed, Tempy, Terang, Torquay, Ultima, Waitchie, Walpeup, Werrimull, Wonthaggi, Woomelang, Woorinen, Wycheproof, Yaapeet.
- (10) Drainage Districts.—Cohuna, Kerang East, †Maffra-Sale, Merbein, Murrabit, Nyah, Red Cliffs, Rochester, ‡Rodney, Shepparton, Tongala-Stanhope, Wervibee, Woorinen.
- (12) Coliban System.—Axe Creek Waterworks District, Coliban Urban District, Harcourt Waterworks District, Marong Urban District.
- ‡ Districts having an Aggregate Deficiency since 30th June, 1938, as at 30th June, 1946, against which is set off the surplus arising from 1945-46 transactions.

^{*} Owing to good rains early in the season throughout the Wimmera-Mallee Districts many channels were run without the necessity for drawing on Headworks Supplies.

In addition to the above, the following quantities have been released from Headworks at Pine Lake, Green Lake, and Dock Lake Storages for irrigation areas in Western Wimmera and Wimmera United Districts since 1933-34:—

				Year.	 	_		Area Watered.	Gross Supply Released fron Headworks.
								Acres.	Acre feet.
1933-34					 	• •	 	1,454	5,703
1934–35					 		 	1,760	6,197

APPENDIX F.

STATE RIVERS AND WATER SUPPLY COMMISSION.

TOTAL STORAGES IN STATE.

In 1902 the total capacity of storages in the State was 172,000 acre feet. The present capacity of those under the Commission's direct control is 1,969,970 acre feet. The Hume Reservoir, designed to contain 2,000,000 acre feet (half of which can, subject to the provisions of the River Murray Agreement, be credited to the State of Victoria), now has a capacity of 1,250,000 acre feet. When the final stage of this work has been completed (involving further approval of the interested Governments), and the Lauriston, Rocklands, and Glenmaggie Reservoirs are completed, the combined capacities of Victoria's storages will be 2,658,470 acre feet.
